Hosting a tournament is a lot of work, however it is a good opportunity to showcase your facility. There will be people seeing your field for the first time, so make sure it is in top shape for the right reasons. We were informed this year that we would be one of three sites hosting the 33rd Annual Joe Hartman Diamond Classic. The tournament brings together the top 16 baseball teams in South Jersey. On May 13, 2006 Overbrook High School hosted two games but the preparation started weeks earlier.

The call informing us about the tournament came in mid-April, so we had a good amount of time to prepare. First, we checked our baseball team’s schedule for possible conflicts. Next was to check our field maintenance program. As luck would have it, a fertilizer application was scheduled the week before the tournament as well as spraying Roundup on our skinned areas. Timing is everything. The grass looked great before the tournament as well as spraying Roundup on our skinned areas were free of weeds.

With two weeks to go, we started cutting-in our pattern for the games. We cut the outfield in three directions at 2 inches every other day. The infield was cut in two directions at 1½-inch every other day. We use an Exmark Lazer Zero Turn mower (with a striping kit) to cut our outfield and an Exmark groundsmaster 3505d for the tournament. The automatic irrigation system was used to wet down the infield at night, setting the stage for game day. We made final sound check was done on the sound system. As luck would have it, a fertilizer application was scheduled the week before the tournament as well as spraying Roundup on our skinned areas were free of weeds.

The week of the tournament was very challenging. We had two games of our own in addition to the final prep for the big games. The day before the tournament is very important. We cut the outfield in three directions at 2 inches every other day. The infield was cut in two directions at 1½-inch every other day. We use an Exmark Lazer Zero Turn mower (with a striping kit) to cut our outfield and an Exmark groundsmaster 3505d for the tournament.

Tournament time is an opportunity to show off your field, while giving the teams a fair, competitive surface to play on. If you get the chance, step up to the plate and be remembered for the right reasons.

* Rich Watson is Grounds Supervisor, Pine Hill Public Schools, Pine Hill, NJ
On February 1, 2006 Joe Warner became our newest Certified Sports Field Manager (CSFM). Joe sat for the exam at the recent Sports Turf Managers Association conference in Orlando at Walt Disney World (January 17-22, 2006). I caught up with Joe for coffee soon after and we talked about the CSFM program.

D. Savard: So, Joe, why did you become a CSFM?
J. Warner: Because it was there! I always believed that it epitomized an ideal, and shows the industry that someone is on top of the newest things in our industry. Passing the testing procedure is an achievement.

D. Savard: How long did you prepare?
J. Warner: About thirty-five years (laughs). I spent 6 months reading all my books to help prepare, but really, the test was really the compilation of all my years of experience in the field. The hardest thing about the exam was sitting down and thinking about how I was going to answer the questions. The test asks practical questions about practical situations or problems. Somebody could be book smart and not pass; it truly was a test of my experience.

D. Savard: How did you get into Sports Field Management?
J. Warner: I was in my own landscape business for 25 years and got out. Somehow I was drawn back in and began working with the DVH Group. DVH was involved with commercial and residential turf and we eventually got into sports fields. We knew turf care, but we found that sports fields were a horse of a different color. I found that there were lots of people in the landscape business bidding themselves out of business and on the sports field side there were few qualified people out there and lots of shoddy work. What I wanted to do was to distinguish our company from the rest; besides, I wanted to make a difference.

D. Savard: How is that?
J. Warner: By educating the public and becoming more professional, we can do a better job of creating safe, playable fields. It starts by having a professional attitude, acquiring knowledge and by delivering professional results. The CSFM program is an avenue for the professional to improve him or herself.

* Don Savard is a Certified Sports Field Manager; Director, Athletic Facilities and Grounds, Salesianum School; and SFMANJ Vice-President

FIELD OF THE YEAR CONTEST 2006

Sports Field Managers Association of New Jersey (SFMANJ) is announcing its annual FOY contest. Individual awards will be presented to the school, FOY and parks/recreation FOY.

ENTERING is easy, send to:
SFMANJ Contest, Po Box 370, Annandale, NJ 08801
Entries must be received by September 30, 2006

ELIGIBILITY:
• Two categories; School or Parks/Recreation fields only
• Current member of SFMANJ
• Natural grass fields only

SEND:
• Color photos of your natural grass field (10 maximum)
• Name of facility and location
• Name of owner
• Your name, position and contact number

CRITERIA for awards:
• Playability and appearance of the playing surfaces
• Based on photos and a site visit by the SFMANJ Award Committee
• Feel free to have sports groups in your photo

AWARDS:
Winners will be honored with a plaque at New Jersey Turfgrass Expo 2006 (December 5-7, 2006) and be interviewed for a feature article in SFMANJ Update newsletter (also receive a two-night stay at Taj Mahal, Atlantic City and three days of education).

NOTE:
*Photos will not be returned and may be used on SFMANJ website and promotional settings.

SFMANJ STUDENT SCHOLARSHIP AVAILABLE.

A $500 SFMANJ Student Scholarship will be awarded at Expo 2006 in Atlantic City (December 5-7, 2006). To apply, email or send via US Mail a 500-word essay on “Why you deserve this scholarship.” The student must be member of SFMANJ in good standing. Please include:

Name, address, email
Your declared major and grade point average
Classes, seminars or field days you have attended concerning sports field management
Accomplishments concerning the turf industry
Internships
Plan for the future

Email: hq@sfmanj.org

US Mail:
2006 SFMANJ Student Scholarship
PO Box 370
Annandale, NJ 08801

As many of you know, the turfgrass industry lost a dear friend and colleague in September 2006. We will all miss Henry very much, and would like to ensure that his legacy lives on. The Indyk family would like to establish a memorial fellowship to support graduate students interested in applied turfgrass science. This fellowship is being created to help ensure that tomorrow’s graduate students have the financial resources to get an advanced degree in turfgrass science at Rutgers University. To fund this graduate assistantship, each year in Henry’s name, we will need to raise a total of $400,000. Your generous support at this time will bring us closer to reaching this goal.

To make a tax-deductible contribution today, please send a check payable to the Rutgers University Foundation, 7 College Avenue, New Brunswick, NJ 08901. Be sure to indicate “Indyk Fellowship” in the memo portion of your check. If you desire, you may provide a donation in the form of a pledge payable over several years.

For information on other ways to support this fellowship, please contact Dr. Bruce B. Clarke, Director – Rutgers Center for Turfgrass Science (732) 932-9403, ext. 331, or clarke@lance.rutgers.edu or John Pearson, Director of Leadership Gifts at the Foundation, by calling (732) 932-7699 or email pearson@leadership.rutgers.edu.

Rain Could Not Washout SFMANJ’s Summer Demonstration Field Day
Brad Park*

Overnight rain and soaking morning showers could not washout Sports Field Managers Association of New Jersey’s Summer Demonstration Field Day held at the County College of Morris (CCM), Randolph, NJ on June 28, 2006 – although it did force the SFMANJ Board to make some slight adjustments to the program in what President Ken Mathis appropriately called, “Plan B.”

The morning program, scheduled to be completed outdoors and to include trade show time, was moved inside and featured Super Bowl consultant George Toma. Toma displayed his versatility as a public speaker by giving back-to-back 1.0-hour presentations and field questions from attendees following both talks.

Craig Tolley, President, CCM and SFMANJ Board Member as well as the CCM staff are graciously acknowledged for hosting the Summer Demonstration Field Day as well as arranging the fine lunch that followed George Toma’s presentations.

The timing of the day’s weather could not have worked out better as the sun shone brightly for the majority of the day, with the exception of a brief afternoon shower that lasted just long enough to delay the start of the tradeshow.

Following the tradeshow, it was time for vendors to demonstrate the latest and greatest sports field equipment. A meeting between representatives of New Jersey equipment giants Storr Tractor and Wilfred MacDonald, as well as CCM personnel, determined that the skinned infield surface was a good condition to start the event. Following the tradeshow, it was time for vendors to demonstrate the latest and greatest sports field equipment. A meeting between representatives of New Jersey equipment giants Storr Tractor and Wilfred MacDonald, as well as CCM personnel, determined that the skinned infield surface was a good condition to demonstrate field grooming equipment. Those vendors demonstrating equipment included: Aar-Core, Inc., Bobcat of North Jersey, Liberty Key, Storr Tractor Co. and Philadelphia Turf Co., and Wilfred MacDonald.

The day ended with a talk delivered by Dr. John Grande, Director, Rutgers Snyder Research and Diagnostics Center, who discussed the latest Toro Infield Pro. TIPS FOR ATHLETIC FIELD CARE
Dr. David D. Minner*

Use higher than normal seeding rates. In most cases, facilities are needed for play before seeded grass has completed a full year’s growth. Higher seeding rates allow for faster ground coverage and provide better competition with weeds, especially crabgrass. Higher than normal seeding rates that provide faster coverage are Kentucky bluegrass 3 to 4 lbs/1000 sq. ft., tall fescue 8 to 12 lbs/1000 sq. ft., and perennial ryegrass 10 to 15 lbs/1000 sq ft.

Deeper seeded grass that is still able to germinate survives traffic better. Drill seeding and seeding after hollow coring is preferred. Plants that develop crowns deeper in the soil are more protected than those that are on top of the soil and are easily damaged.

When renovating, keep existing turf if there is at least 30 to 50% grass cover. Mature grass plants, even in a thin stand of grass, have better traffic-tolerance than a thick stand of seedling turf. Unless there is good reason, avoid non-selective killing of all grass in high-traffic areas. Keep the grass you have and overseed with coring and slicing to fill in bare spots.

Use a combination of nitrogen sources. Quick release in the fall, slow release in early summer, and organic nitrogen in the spring or summer.

Use equal N and K for traffic and drought tolerance.

Always have at least one showcase field. Reallocate resources so that you have at least one field that lets your boss and the public know that you are capable of producing quality turf when given the proper resources and control of the field. Even if resources are limited, don’t spread them out so that all of your fields are average-to-poor or your reputation as a groundsman may be perceived as average-to-poor. Document what it takes to have at least one good field, and use the information to justify an increase in resources to improve the rest of the fields that are in poor condition.

Build a repertoire of instant solutions that you can count on in time of need. For example, thick-cut sod, pre-germinated seed, water removal products, smoothing and rolling. Like any good ball team, you should practice these procedures before you try them in game situations.

Some Common Mistakes
Non-irrigated areas

Using 100% ryegrass for fall repair of summer “burn out”. Each year you will be doing the same thing over and over. Continue to use the ryegrass but add 30% Kentucky bluegrass, especially those from the low-maintenance and drought-tolerant categories.

It is a mistake to anticipate that tall fescue can be used as a substitute for an adequate irrigation system, especially on soccer fields where a smooth ball rolling surface is desired. Even with its excellent drought and traffic tolerance, tall fescue’s bunch habit can cause a clumpy and uneven playing surface when water is lacking and traffic is intense. Should clumping become a problem, interseeding with more tall fescue and temporary watering with a portable rain gun will be needed to regain adequate turf density. If Kentucky bluegrass and perennial ryegrass have failed because of limited water then give tall fescue a try. The key point here is not to discourage you from using tall fescue, but instead to encourage you to provide at least temporary irrigation. Watering as little as five times during the summer may be sufficient to maintain an adequate stand of tall fescue.

Close mowing and heavy nitrogen applications of any non-irrigated turf, especially Kentucky bluegrass. This combination of mowing, watering, and fertility is the best way to predispose Kentucky bluegrass to summer patch and loss of turf during summer drought dormancy.

Irrigated areas

Over watering – too much, too often, too shallow. As a general rule, turf should be allowed to slightly wilt before irrigation. At this stage of wilting, soils are well-aerated because air has replaced the water that was removed from the soil pore space by the roots. Roots need water to grow, but they also need air-filled pore space. Excessively wet soils become anaerobic and have a distinct sulfur odor of rotten eggs. Root growth is poor in anaerobic conditions. Allow the turf to slightly wilt and then apply about an inch of water. Wait until the turf just begins to wilt before watering again. About 1.0 to 1.5 inches of water per week is sufficient for soil-based fields. Sand-based fields may require more frequent watering.

Mid-day watering of grass. This increases humidity and free moisture near the plant that results in increased disease.

No plan for watering the skin on baseball/softball fields. Don’t forget to install separate heads and valves for watering just the infiel d field. Don’t place the heads so that they water both the dirt and the grass. Watering the skin portion of an infield is just as important as watering the grass. A separate station is needed for watering the skin infiel d because it is managed differently than grass.

DID YOU KNOW?

The Major League Baseball record for
a consecutive games hitting streak is
56 games set by the New York
Yankees’ legendary Joe DiMaggio
from May 5 - July 16, 1941.

Tear-out and disposal costs for infill systems have been estimated to be $1.75 to $2.25 per
ft²; therefore, to tear-out and dispose of an
80,000 ft² surface, it is conceivable to budget
between $140,000 and $180,000.
