TORO  Count on it.
Currently we have 279 new & renewed members. In December 2007, SFMANJ mailed invoices for 2008 membership dues to all current members. If you did not receive an invoice, please contact us at 856-514-3179 or download the membership form available at www.sfmanj.org. Mail membership dues direct to SFMANJ, PO Box 205, Pennsville, NJ 08070.

SFMANJ at (856) 514-3179 or Brad Park at (732) 932-9711, x127

Editor: Brad Park, Rutgers University
Email: park@aesop.rutgers.edu

SFMANJ does not necessarily support the opinions of those reflected in the following articles.
In the last issue of SFMANJ Update I had to announce the departure of our executive secretary. Since that time, the board created a search charged with filling the position. I would like to announce that we have completed that task, and welcome to our association Mrs. Debra Savard. Debra has been appointed to fill the position of executive secretary for the SFMANJ. Our search committee (consisting of Brad Park, Jeff Cramer, and myself) interviewed several candidates and unanimously agreed on Debbie.

Debbie comes to us with a broad range of experience in office management, bookkeeping, and customer service. She also has an extensive background in graphic design and printing. The search committee felt that Debbie's unique experience and skills would greatly benefit our association. She presented herself as very positive, energetic, and motivated individual.

After reviewing all the candidates the search committee felt that Debbie would be the best fit for SFMANJ. Please join the board in welcoming Debbie to our association. As part of our transition to the new executive secretary we have changed the SFMANJ mailing address and phone number.

Dr. Henry W. Indyk
Graduate Fellowship in Turfgrass Science

As many of you know, the turfgrass industry lost a dear friend and colleague in September 2005. We will all miss Henry very much and would like to insure that his legacy lives on. The Indyk family would like to establish a memorial fellowship to support graduate students interested in applied turfgrass science. This fellowship is being created to help assure that tomorrow’s graduate students have the financial resources to get an advanced degree in turfgrass science at Rutgers University. To fund a full graduate assistantship each year in Henry’s name, we will need to raise a total of $400,000. Your generous support at this time will bring us closer to reaching this goal.

To make a tax-deductible contribution today, please send a check payable to the Rutgers University Foundation, 7 College Avenue, New Brunswick, NJ 08901. Be sure to indicate “Indyk Fellowship, Turfgrass” in the memo portion of your check. If you desire, you may provide a donation in the form of a pledge payable over several years.

For information on other ways to support this fellowship, please contact Dr. Bruce B. Clarke, Director – Rutgers Center for Turfgrass Science (732-932-9400, ext. 331; or clarke@sesop.rutgers.edu) or John Pearson, Director of Leadership Gifts at the Foundation, by calling (732) 932-7899 or email: pearson@winants.rutgers.edu

Is there any benefit to be gained by spraying off existing vegetation with a glyphosate product (i.e. Roundup PRO) prior to tilling with a Rota-dairon to a depth of 6.0 to 8.0" as opposed to tilling in green vegetation?

My objective is to add lime based on recommendations and till the existing infield topsoil before stripping it to install select fill material.

Tilling in green vegetation isn’t necessarily a problem - depends what the vegetation is and how dense/thick it is. I would spray off if there are any difficult to control perennial weeds present - tilling won’t kill all vegetation and surviving plant material will re-invade including the existing turfgrasses. Also, any large “mats” of dense/thick vegetation will form clumps in the tilled soil which may present problems during final grading and smoothing operations.

Dr. James Murphy is Turfgrass Management Extension Specialist, Rutgers University; and SFMANJ Advisor
The presence of broadleaf weeds not only reduces the aesthetic quality of the turf, but more importantly they compete with the desired turfgrass for water, nutrients, and light. Failure to control these weeds often results in a deterioration of the turfgrass stand over time. Broadleaf weed infestations are often symptomatic of a more basic cultural or soil problem in many cases. If these problems persist, weeds also will be a continuous problem. Thus, a sound weed management strategy not only includes removal of existing weeds, but also using corrective management measures for the factors causing poor quality turfgrass.

CULTURAL CONTROL OF BROADLEAF WEEDS

The numbers and types of broadleaf weeds found in turfgrass are greatly influenced by management and cultural practices. For example, close mowing and too little nitrogen favor white clover. Close mowing also favors weeds such as carpetweed, spurge, plantains, and dandelion. Poorly drained areas favor weeds such as ground ivy, while compacted sites favor knotweed and plantains.

Correcting improper management practices to maintain a dense, vigorous turf is the best and most lasting method for broadleaf weed control. Of particular importance are proper fertilization, mowing, and watering. Several broadleaf weed species cannot be satisfactorily controlled with proper use of herbicides, further increasing the importance of proper cultural management to reduce the opportunity for their establishment and spread.

Herbicides should be considered an aid, but not a cure, for broadleaf weed problems in landscaped turf.

CHEMICAL CONTROL OF BROADLEAF WEEDS

In turf where broadleaf weeds have become a problem, application of an effective herbicide may be necessary for their removal so that the turf can be improved through better management and cultural practices. Several herbicides are available for broadleaf weed control, but weeds vary in response to different products. Thus, proper identification of the weeds is essential before the most economical and effective herbicide is selected. Suggested resources for weed identification include “Weeds of the Northeast” by Richard H. Uva, Joseph C. Neal, and Joseph M. Ditomaso available through Comstock Publishing Associates (a division of Cornell University Press).

Also, two web sites can be accessed at:
www.rce.rutgers.edu/weeds and www.cook.rutgers.edu/-turf, then click on turfgrass weeds.

Two or more different herbicides are frequently sold as prepackaged mixtures. Most of the materials discussed are sold by several manufacturers, often under different trade names differing in formulation and concentration. Therefore, no rates are presented here. READ and FOLLOW carefully the label directions on the herbicide container. Applying rates too low may result in inadequate control, while applying rates too high may cause turfgrass injury. The following herbicides are available for the selective removal of broadleaf weeds from cool season turfgrasses.

2,4-D is the oldest and most widely used herbicide and provides broad spectrum weed control in turfgrass. This chemical is particularly effective for control of weeds with taproots such as dandelion, broadleaf plantain, mustards, and shepherd’s purse. Amine formulations are most commonly used. However, the low volatile ester form of 2,4-D is often recommended for control of wild garlic and wild onion. Some weeds not controlled well by 2,4-D are white clover, chickweed, purslane, and ground ivy.

MCPA is chemically-related to 2,4-D and may be used as a substitute for 2,4-D in prepackaged mixtures. MCPA is not a broad spectrum herbicide as is 2,4-D and its use alone (i.e., not mixed with another herbicide) is not usually recommended.

MCPP is most effective in the control of several perennial or winter annual weeds such as chickweed and clovers.

DICAMBA controls many different weeds, several of them are not easily controlled by 2,4-D or MCPP. Of particular importance are the summer annual weeds that have a prostrate growth habit, including knotweed, purslane, and spurge. Dicamba however, does not control plantains.

DICHLORPROP (2,4-DP) AND TRICLOPYR are sold in prepackaged mixtures with 2,4-D and provide broad spectrum weed control.

TUESDAY, DECEMBER 9, 2008

Credits, Credits, Credits!
We’ve packed our Tuesday schedule with pesticide applicator credits and your favorite speakers, so start off Expo with quality education and the credits you need to maintain your professional license!

9:00-11:30 AM CORE SESSION 5 Credits: CORE
9:00-10:30 Understanding a pesticide’s mode of action is the first step toward selection, effectiveness and safety
Dr. Steve Hart, Rich Buckley and
Dr. Albrecht Koppenhöfer, Rutgers Univ.
10:30-11:30 Pesticide Core Jeopardy: A game-show format to review pesticide safety and handling
Mike Oleykowski, Fisher & Son

12:30-2:30 PM 3A SESSION 4 Credits: 3A, 6B, 8C, PP2
12:30-1:30 Significant insect pests & other nasty beasts in the NJ landscape
Rich Buckley, Rutgers Univ.
1:30-2:30 Controlling weeds in ornamentals is not as difficult as you might think.
Dr. Jeff Derr, Virginia Tech Univ.
Let’s talk about controlling Invasive Weeds
Dr. Jeff Derr, Virginia Tech Univ.

2:45-4:45 PM 3B SESSION 4 Credits: 3B, 6B, 8C, PP2
2:45-4:45 Doing more with less: Developing a pest control program that will help you grow better grass... and better businesses.
Dr. Jim Murphy, Dr. Steve Hart, John Buechner

12:30-4:00 PM GOLF SESSION Nutrients, the Golf Course and the Environment 1 Credit: 5, 3B, 6B, 8C, PP2
Last year, golf attendees asked us to pull together a program that touches on the environment, fertility, and the golf course. We’ve assembled a powerful lineup of speakers who will address those issues... and in this time of spiraling fertilizer costs, awareness of fertility choices can not only help you grow a healthy golf course but also keep your budget in line.

12:30-1:15 What’s up with all of the weeds in your ponds?
An IPM approach to Pond Management
Dr. Steve Souza, Princeton Hydro
1:15-2:00 Foliar Fertility- a splash on the grass
Dr. Roch Gaussoin, Univ. of Nebraska
2:15-3:00 It’s not easy being green:
An organic approach to Golf Course Management
Jeff Carlson, Vineyard Golf Club, MA
3:15-4:00 How to Manage the Organic Matter in your Golf Greens... and why!
Dr. Roch Gaussoin, Univ. of Nebraska

4:00 - 7:00 PM GRASS ROOTS, INC. presents:
Golf Mix and Mingle Cocktail Reception
Thanks to Ken and Keith Kabik, Grass Roots Inc. once again is sponsoring a 3-hour cocktail reception for golf attendees. Many of you have told us that this is the social highlight of Expo, and that you enjoy greeting old friends and meeting new ones while enjoying the fabulous Kabik hospitality. Thank you, Grass Roots, for providing this opportunity to eat, greet, and network!

WEDNESDAY, DECEMBER 10, 2008

9:00 AM - 12:00 PM GENERAL SESSION
In addition to giving you some insight into the amazing science going on at Rutgers, this session will include a new version of Dr. Jim Murphy's management slide show. Our keynote speaker is a nationally known speaker who will provide us with a view of our industry's future. This year's general session is a must attend event!

9:00-9:05 NITA Annual Meeting
9:05-9:10 Official welcome from Rutgers University
9:10-9:40 Rags to Riches: Turf Management in 2008
Dr. Jim Murphy, Rutgers Univ.
NITA Environmental Stewardship Award Presentation
9:45-10:1 Location, location, location... what turf species – and mixtures- go where?
Dr. Bill Meyer, Rutgers Univ.
NITA Member of Year Award Presentation
NITA Recognition Award Presentation
10:20-10:4 Mating Disruption of Turf Pests- Sex and the City?
Dr. Albrecht Koppenhöfer, Rutgers Univ.
10:45-11:10 10 things you never knew about the Rutgers Turf Program... a peek behind the scenes
Dr. Stacy Bonos, Rutgers Univ.
11:10-11:45 What Lies Ahead for the Green Industry?
David Crowe, DC Legislative & Regulatory Services
11:50-12:00 NITA Hall of Fame Award Presentation

12:00 - 1:00 PM LUNCH sponsored by STORR TRACTOR COMPANY
One of NITAs—and Rutgers' greatest champions is MaryLou DesChamps and the Storr Tractor Company. Once again they've sponsored your lunch, allowing you plenty of time to get back into the sessions for the education and credits you desire. Thanks MaryLou!

1:00 - 4:00 PM USGA GOLF SESSION
2 Credits: 3B, 6B, 8C, PP2 1 Credit: Core
1:00-1:30 USGA Year in review
Adam Moeller, USGA Agronomist
1:30-2:00 Understanding the different pesticide chemistries currently used in the golf industry
Dr. Mike Fidanza, Penn State Univ.
2:00-2:30 Annual bluegrass weevil problems in 2008... let's look at their biology, ecology, and monitoring.
Ben McGraw, Rutgers Univ.
2:30-3:00 Chemicals update... what's new on the label
Dr. Rich Hurley, Rutgers Univ.
3:00-3:30 Resumes, interviewing, and power points: How best to impress and be selected
3:30-4:00 Trees and turf: A peaceful coexistence
Dr. Roch Gaussoin, Univ. of Nebraska
