Hudson Adds Nonlubricating Pump to "Peerless" Sprayers

Drive mechanism of the new "Ten-O-Matic" pump, from H. D. Hudson Manufacturing Co., is enclosed in a transmission chamber which runs in a bath of oil, the firm announces.

New pump thus operates without the use of packings, cups, sliding pistons, or similar wearing parts, and eliminates the need for daily lubrication, Hudson reports. All "Peerless" power sprayers of 10 gpm output will include the "Ten-O-Matic" as standard equipment, a company spokesman revealed.

After a 10 hour break-in period, oil in the transmission is changed only once every 100 hours, or once a season, whichever comes first. All parts of the pump with which chemicals come into contact are made of metals and synthetics of extremely high corrosion resistance, the firm adds.

New pump will maintain constant volume up to 10 gallons per minute at pressures up to 400 lbs. without noticeable dropoff from slippage or leakage, Hudson claims.

Sprayers with the new "Ten-O-Matic" pump come in 150-, 200-, and 300-gallon sizes, Hudson reports, and are available on skids for use on a truck or trailer, on wheels with a hitch for truck or tractor drawbar, and with front-end casters and hitch for tractor or truck towbar.

For more information on the new pump, write H. D. Hudson Manufacturing Co., 589 East Illinois St., Chicago 11, Ill.

**XL Turf Special**

**28-7-14**

**Water-Soluble Fertilizer**

Provides better control of growth, texture, and color. Starts to work almost instantly, feeding through the blades and roots of grass. Can be applied at critical periods of growth without burning. Compatible with most common insecticides and fungicides.
