always the danger that they may break during storms and cause extensive damage to the building. This danger may be substantially reduced by properly installed supporting cables.

In attaching cables to branches, screw hooks with lag threads are generally used; never is the cable wrapped around the branch. Skill and experience are needed to locate the cables in the tree so they will function most effectively.

Dowpon Chemical Lawn Edger

A chemical can now be used to accomplish one of the more difficult chores of lawn management, reports J. P. Fullmer, Clemson University horticulturist. Checking on the use of Dowpon as a lawn edger, Fullmer finds users are said to be highly pleased with this herbicide.

"Edging with Dowpon is now one of the easiest jobs," Fullmer says.

To chemically edge unwanted grass from walks, driveways, trees, and flower beds, a compressed air knapsack sprayer is used. This sprayer should be used exclusively for herbicides since residual weedkilling chemicals remaining in the sprayer could injure or kill plants if you were to use it for other spraying jobs later.

Mixing two tablespoons of Dowpon for each gallon of water makes an effective solution. Direct spray on unwanted grass enough to wet the leaves and avoid runoff, Fullmer recommends.

Two applications are required to give a satisfactory kill. A second spraying 7 to 10 days following the first will give good results. Applications may have to be repeated during the growing season.

Dowpon may be used to edge grass around some trees and shrubs. But since the material does injure some plants, Fullmer makes no blanket recommendation. Applicators can obtain more information about Dowpon by writing to The Dow Chemical Co., Midland, Mich.

Take a good look at the Fitchburg feed plate. It's patented—no other chipper has this feature. Because the feed plate is spring-activated, it "gives" and automatically adjusts to size of wood, up to the machine's rated capacity. Result: No sudden shocks to rotor assembly, engine can be run on lower r.p.m., chipping is smoother, quieter and faster.

No hard-to-control fly wheel. The spring-activated feed plate makes a fly wheel unnecessary. No waiting for fly wheel to speed up, no worries about safety, bearing troubles, or clutch strain. Compare the ease and efficiency of a Fitchburg with any other chipper!

ALSO COMPARE THESE OTHER FITCHBURG FEATURES:

- **RUGGED CONSTRUCTION, PRECISION-ENGINEERING.** Bearing seats are precision-bored in heavy duty, trouble-free bearing holders.
- **SAFETY STOP SWITCH** (standard equipment). Stops all moving parts within seconds—gives your crews greater protection.
- **LARGE, HINGED, WAIST-HIGH FEED APRON.** Protects operator from cutters, feed apron can be closed when chipper is not in use, saves space in storage.
- **SOLENOID SWITCH** (optional equipment). Motor can be idled between feedings. Saves fuel and engine wear.
- **PATENTED QUICK-OPENING 2-WAY CHUTE.** Operator directs chip flow, front or side with flick of wrist. Easy access to steel alloy blades.
