Arborists Change Membership Rules
At Winter Meeting Held At Tampa

Arborists no longer need to be members of the International Shade Tree Conference in order to join the National Arborist Association. This change was made during the regular winter meeting of the national group. Meeting at Tampa, Fla., tree care operators also set up two new membership categories. The board of directors may now approve associate memberships for organizations who supply or service tree care companies. Another category was established for privileged members. The board, by a two-thirds vote may extend this type membership to any retired NAA member of the arboriculture profession.

Another noteworthy change in by-laws of the group, according to Clarke W. Davis, NAA executive secretary, was the decision to henceforth hold their annual meeting each February, rather than during the regular August meeting of the ISTC.

In the board session, previous mail approval for 21 new member firms was reaffirmed. Board members approved a final draft for their lightning protection standard, established a new committee to prepare a statistic questionnaire, and approved a motion enabling the group’s executive committee to set the location for future winter meetings.

**EDP Possibilities**

In the formal program sessions, the group invited a specialist to discuss the feasibility of computers for tree care companies. James W. Polk, First Data Corporation, Tampa, Fla., outlined the 3 current methods for electronic data processing available to a company. Computers can be purchased or leased, he said. But the most practical step for many smaller businesses is a third method which is use of a custom computer service.

Data service bureau centers offer a service in which they write programs to handle the various jobs desired by a company. They provide professional data processing counseling, help upgrade business procedures, set up cost accounting, and other services needed by a client. They can prepare economic surveys, develop market analyses, and make feasibility studies. Such custom services can also staff and operate a client’s own owned or leased equipment.

Polk warned arborists that electronic data processing is not a program which can be attempted on a crash basis. Rather, he said, it needs careful consideration and time. Management needs to become acquainted with the capabilities of the system and its possible uses. As of now, Polk said, there is no
set formula for obtaining a profit by using a data processing system. Profits, he stressed, are derived from application of sound management principles, adequate planning, proper organization, and controlled execution.

Union Procedures Aired

How to react when the union knocks at your door was the subject of Daniel R. Coffman, Jr., Jacksonville, Fla., attorney. Coffman spent a good portion of his time telling arborists what wise management does before the so-called knock on the door. There is a crying need, he said, for management to become more knowledgeable and sophisticated on employee relations.

Coffman reported that he himself was well versed in the union guidebook written for union organizers. He further said he had discussed union problems in organizing with a union business agent.

Briefly, according to the union agent, chances of getting workers to organize are poor if employees are convinced that the company is not taking advantage of them. Other factors hurting unions in their efforts to organize workers are: employees who have pride in their work, good performance records kept by the company which show that employee efforts are recognized and appreciated, a lack of highhanded treatment or discipline, no claims of favoritism which has not been earned through work performance, and supervisors who have good relationships with subordinates.

Coffman's union contact said his first advice to a non-union employer who wanted to stay non-union would be to get rid of supervisors who refuse to practice good day-to-day human relations in directing their employees. Also, he suggested getting rid of all borderline defensive-type employees who have forgotten (or never learned) how to give their employer a good day's work without gripping. This direct union advice, Coffman said, confirms an old saying that the best union organizers are "first-line unqualified supervisors."

The first-line supervisor, Coffman said, is the keystone of good employee relations. He gives the company its image, whether good or bad. Coffman asked arborist employers to question their own operation. Do you, he asked them, have a method of supervisory selection which considers education, prior training, experience, and leadership ability? Succeeding questions from Coffman to arborists were: do you provide supervisors with adequate training in company policies, practices, and human relations; do you maintain an adequate margin between the supervisor's pay and that of his subordinates; and do you promptly follow up a supervisory selection to determine if it was a correct one?

Supervisors, Coffman said, must realize that they have a function other than getting the work out. They must know their men, and the men must feel free to communicate with them when they have problems or grievances.

Workers want security, Coff-
Clean up roadsides, ditches, or any noncrop land with MBC. MBC is a nonselective herbicide—spread or spray it on and it kills top growth almost on contact, leaches into the soil to attack roots, sterilizes soil for at least a season.

MBC completely eliminates Johnson grass, bur ragweed, hoary cress, and other troublemakers.

Also for low-cost control along roadsides or on smaller areas such as fence lines and around power-line towers, try Hooker Sodium Chlorate. It gives you control over all weeds and protects against their return for up to two years.

For more information on these powerful killers, write Agricultural Chemicals, Hooker Chemical Corporation, 405 Buffalo Avenue, Niagara Falls, N.Y. 14302.
