Fusarium Blight Resembles Dollar Spot Disease

Dr. George A. Bean, turf pathologist in the University of Maryland's Department of Botany, revealed that symptoms of Fusarium blight—a disease infecting Windsor, Kentucky bluegrass and Merion are somewhat similar to those of dollar spot disease.

Fusarium blight, like dollar spot, causes lesions—one to many per leaf—with white centers surrounded by light brown margins. Lesions usually extend across the width of the leaf, causing a general appearance of circular light tan areas in infected sod.

The two diseases differ, however, in that blight-infected areas can increase in size until they run together, while dollar spot areas rarely get larger than 4 to 5 inches in diameter and seldom coalesce. Also, with Fusarium blight a few healthy bluegrass plants occasionally remain in the center of an infection circle, giving it a "frog eye" look.

Appearing in early June and remaining sometimes through September, Fusarium blight infects the warmest sections of lawns (such as those near sidewalks or driveways); according to Bean. Slopes with southerly exposure are more severely damaged than others. Of the grasses it infects, Merion is hardest hit.)

Tersan-Om fungicide treatments can prevent or reduce the disease severity, says Bean. Management programs that maintain healthy turf should help in reducing if not preventing its occurrence.

**Insect Report**

WTT's compilation of insect problems occurring in turfgrasses, trees, and ornamentals throughout the country.

**Turf Insects**

- **CHINCH BUGS**
  - **Blissus spp.** (Blissus spp.)
- **A FLEAMOPPER**
  - **Spanogonicus albofasciatus**
- **Arizona:** Heavy in 12 Tifgreen Bermudagrass lawns at Tempe, Maricopa County.
- **A GROUND PEARL**
  - **Margarodes meridionalis**
- **Arizona:** Heavy in 12 Tifgreen Bermudagrass lawns at Tempe, Maricopa County.
- **RHODES-GRASS SCALE**
  - **Antonina graminis**
- **Arizona:** Adults medium on red and blackjack oak foliage in Lee, Randolph, Macon, and Chambers Counties.
- **SOD WEBWORMS**
  - **Utah:** Larvae damaging lawns at Logan, Cache County.

**Tree Insects**

- **COOLEY SPRUCE GALL APHID**
  - **(Adelges cooleyi)**
- **Ohio:** Galls in moderately damaging numbers on several spruce in ornamental planting in Portage County. Infested spruce in Cuyahoga County.
- **PAINTED MAPLE APHID**
  - **(Drepanaphis acerifolii)**
- **California:** Adults medium on silver maple trees at Ventura, Ventura County.
- **BLACK TURPENTINE BEETLE**
  - **(Dendroctonus terebrans)**
- **Alabama:** Larvae and adults damaged shade pine trees in Lee County; several large lawn trees dying.
- **ELM LEAF BEETLE**
  - **(Pyrrhulina luteola)**
- **Nevada:** Adults emerging from hibernation in infested areas of Lincoln County; damage unusually heavy at Caliente and Panaca areas and generally light at Pioche. Light on elms in Esmeralda County north of Tonopah, Nye County. Esmeralda County is a new county record. **Texas:** Activity heavy in Dallas, Hunt, Hopkins, Franklin, and Titus Counties. **Oklahoma:** Late instars, probably third generation, light on Siberian elms in Akese River area; defoliation moderate to heavy.
