FALL FERTILIZATION FACTS

FALL is the season for heaviest fertilization of COOL-SEASON GRASSES such as bluegrass, fescue, and bent. Weather conditions are right for maximum development of crown, rhizome, and stolon; soil moisture and temperature are best for efficient use of fertilizer; grass has less competition from weeds and traffic.

FERTILIZER choice should be Nitroform® organic nitrogen. It provides slow, steady feeding right up until temperature stops growth. Non-leaching, Nitroform stays in the soil to get turf off to a good start in the spring.

FACTS for fall fertilization with Nitroform... apply ½ of annual rate (12-20 pounds/1,000 square feet) to cool-season grasses. Apply ½ of annual rate (12-30 pounds/1,000 square feet) to warm-season grasses.
