**HOW TO HANDLE  
A WATER SHORTAGE**

**How Mowing Affects Turf**

# Pennfine Perennial Ryegrass.

If it's got a weakness, nobody's found it.  
But we have heard about some new strengths.

The Pennfine story gets better as it goes along.

Four years ago, the agronomists at Pennsylvania State University finished their work on Pennfine. And the professional turf community put this remarkable fine-leaved perennial ryegrass to work on golf courses, athletic fields, sod farms, parks, cemeteries and public grounds across the country.

Clean-cutting Pennfine

Other fine-leaved ryegrasses

## The ultimate test.

Now, after thousands of grounds maintenance pros have used Pennfine, nobody's reported a real weakness. All the characteristics the Penn State agronomists

selected for—unsurpassed mowability, excellent disease resistance, exceptional decumbency, persistence under diverse management conditions, fine texture and compatibility with Kentucky Bluegrass—have proven out in the real world. That's the ultimate test.

Dr. Joe Duich of Penn State inspecting a new application for Pennfine: Independence National Historical Park, Philadelphia.

In fact, Pennfine has performed even better in some areas than anticipated. It's proven to be more tolerant to both shade and heat. It's shown excellent rust resistance on the West Coast. And, although Pennfine showed good to excellent disease tolerance in university trials, its disease tolerance appears to be even stronger in actual use.

Pennfine production fields in the Pacific Northwest where a major effort is underway to meet growing demand for seed.

## Increased production.

From the very beginning, there's been only one problem with Pennfine: not enough seed to meet demand. And that problem is just about solved with substantially increased production. We can't make you a flat promise. But, if you order fairly soon, you should be able to get Pennfine seed in the quantity you want.

On the other hand, maybe you're still not convinced. In that case, we'll send you a test kit with enough Pennfine seed for you to develop a 100 sq. ft. test plot. And you can try to find a weakness on your own turf.

Either way, whether you seed Pennfine this year or just test it, we think you'll be impressed by the results.

- Let me know how I can order Pennfine Perennial Ryegrass.
- I'm still not convinced. Send me a Pennfine Test Kit.

# Editorial

There will be an overwhelming and paralyzing increase in government regulations of all aspects of weed control, not only in the use of herbicides but in alternate methods as well, according to Dr. Boysie E. Day, professor of plant physiology, University of California at Berkeley. He spoke at the Southern Weed Science Society Meeting earlier this year in Dallas, and we share some of his thoughts here.

An increasing burden of regulatory busy work is today necessary to get a new product registered and this is a deterrent to the development of research workers . . . The national policy on pesticides is to progressively accumulate all significant decisions about pesticides into government hands . . . Greater government control over herbicides will not better the human safety factor because the hazard in weed control has always been associated almost entirely with machines, and regulatory activities are not aimed at alleviating these hazards . . . For greater effectiveness, procedures of weed control must be adapted to local and regional conditions, and this will never be done on a national scale . . . The effect of restricting herbicide use leads to switching from one chemical to another less efficient one which in the end leads to larger doses, not reduction in use of herbicides . . . \$71.5 million will be spent to support the Environmental Protection Agency pesticide program through next March, and this money would be more judiciously spent on research.

Dr. Day's summary is that in the future the regulators will join with the regulated to defend procedures they have established and gained vested interest in. By that time, the staggering costs of regulation will have pruned the industry down to a comfortable half-dozen international companies, and the academic community and other agencies will have been successfully isolated from the decision-making processes. Pesticides will then have become in effect public utilities moving with glacial slowness without a harsh word spoken. All decisions will be made with a minimum of publicity by quiet negotiations between government and corporate bureaucracies on the basis of unpublished industry research.

# PRO4 Diamond Shamrock DACTHAL® herbicide

## Gentle on grass. Tough on weeds.

Dacthal prevents crabgrass. It's death on *Poa annua*. All in all, it drives 17 troublesome weeds right off the course!

Yet Dacthal is so gentle it can be used on nearly all turf grasses and 120 flowers and shrubs. Just follow label instructions.

Apply Dacthal in early spring to control most annual grasses and many annual broadleaf weeds. A second application in late summer knocks out late-germinating grasses such as *Poa annua*.

Gentle Dacthal. Wettable powder or 5%

granules. It's one of the Diamond Shamrock Pro-4 Turf Care pesticides, which include DACONIL 2787® fungicide, DACAMINE® and DACONATE® postemergence herbicides . . . plus Dacthal preemergence herbicide.

Ask your turf chemicals supplier for Dacthal, or contact the Diamond Shamrock sales office nearest you.

# Two pictures are worth

**ROUNDUP.<sup>®</sup>  
AN EXTRAORDINARY  
HERBICIDE THAT'S  
TOO IMPORTANT TO  
BE OVERLOOKED.**

If you're responsible for maintaining the condition and beauty of landscaped grounds, you've certainly got your hands full. You have to divide your time, and your crew's time, between planting, feeding, irrigating, spraying, pruning, cutting, digging, mending—the list is endless.

Roundup herbicide by Monsanto can simplify one of your most important responsibilities: weed control.

Until Roundup, controlling tough weeds like bluegrass, Bermudagrass and quackgrass usually meant repeated applications of many different herbicides. The cost in time alone could be considerable. And there was no assurance of success.

Roundup will do the job right the first time around. With one application at the proper stage of growth, it controls, not just knocks down, many of your toughest weeds. By going right to the root of the problem.

Always read and carefully follow the Roundup label instructions.

Circle 126 on free information card

**BEFORE ROUNDUP TREATMENT.**

# a thousand words.

AFTER ROUNDUP TREATMENT.

Not a soil sterilant, Roundup is sprayed directly on actively growing weeds. It's absorbed by the leaves, and then translocated to the other parts of the weed—including roots and rhizomes.

Because Roundup destroys both above ground and underground reproductive tissue, the weeds you treat stay controlled. And you'll usually see results in less than ten days.

What's more, Roundup has no residual soil activity. And you know what that can mean for your landscaping program.

With this kind of effectiveness, Roundup can take the place of many chemicals you're now using.

Roundup. It can control many of your toughest weeds the first time around with no soil residue. And it can also simplify your herbicide inventory.

For more information on Roundup, write Roundup, Monsanto Agricultural Products Company, 800 North Lindbergh Boulevard, C3NJ, St. Louis, Missouri 63166.

# Government News Business

The Environmental Protection Agency has postponed to June 30 the effective date of the recent ban on further production of most pesticides containing mercury. Administrator Russell Train delayed the effective date of the ban at the request of several producers of mercurial pesticides. The ban originally was effective February 17. The producers reportedly asked for the delay to allow federal courts time to rule on several lawsuits challenging the ban.

More light-duty trucks are to be subject to tighter emission standards under new proposals by the Environmental Protection Agency. The number of pick-up trucks, vans, utility vehicles and off-road vehicles that must meet federal exhaust emission limits will increase by over 50 percent in 1978 under the proposal. In addition, the emission standards for these trucks would be reduced to levels comparable in stringency to those scheduled for 1977 cars.

Building awards rose in January to \$6.39 billion -- a 25 percent leap from a year earlier, which is good news for sod growers and others related to the turf and green industry. Residential building contracts rose 40 percent in January to \$2.16 billion. Also, it appears home mortgage rates may be a bit better this spring. The reason is that thrift institutions are loaded with money to lend. As a result, many real estate experts expect to see mortgage rates dropping at least a quarter percentage point and perhaps a half-point by the time spring house buying gets into full swing. However, any rate downturn may be temporary. Many mortgage lenders see rates inching back up later this year.

Another increase in the minimum wage is coming fast. This time Congress will tie the wage standard to a formula assuring automatic increases from now on. The most likely outcome of informal committee sessions is the wage floor, which rose from \$2 to \$2.30 an hour in January, will be hiked possible to \$2.75. Also, the floor will be indexed to provide automatic boosts. Despite Ford Administration opposition, the bill will move fast. The Senate Labor Committee is already primed to act quickly once the House legislation is passed.

The U. S. Department of Agriculture has issued a full registration to Charles R. Freers of Muscatine, Iowa for his chemical treatment for the prevention and arrest of Dutch elm disease to the states of Missouri, Iowa, Illinois and Indiana. Freers said he expects other states will be registered for his product soon.

According to latest figures published by the Bureau of Mines, sales of horticultural perlite grew 19 percent in 1974. Usage increased from about 21,180 short tons in 1973 to 25,370 short tons in 1974. The two-year growth for sales is about 100 percent.

Labeling for Aquazine algicide, a selective chemical that controls nuisance algae and submerged weeds in ponds without affecting all groups of algae or higher plants in the aquatic environment, has been registered by the Environmental Protection Agency according to manufacturer, Ciba-Geigy Corp., Greensboro, N. C. The algicide is a photosynthesis inhibitor thus making it safe to non-photosynthetic organisms including zooplankters, fish and other aquatic animal life.

# CUSHMAN TURF RUNABOUT

Designed to save you money, when you buy it and when you use it.

The Cushman Turf Runabout provides basic transportation and light hauling capacity at a budget price. So you don't have to tie up a golf car that could be on the course earning a profit.

The Turf Runabout has the speed and versatility to increase your man's efficiency. It can move him and up to 1000 pounds of equipment from job to job quicker. So he'll spend less time walking, more time working.

And the Runabout is powered by an 18-hp, air-cooled OMC

engine for plenty of power, reliability, and ease of service. Wide, turf tires go easy on the grounds and front end shock absorber suspension goes easy on the rider.

The Cushman Turf Runabout. The rugged, versatile turf taxi that saves you time... and money. See your Cushman Turf dealer soon for a demonstration or write:

# HOW TO HANDLE A WATER SHORTAGE

You would think the exclusive, internationally known Valley Club of Montecito, Calif. would not have a problem in the world. At least not a serious one. It has what must be one of California's most beautiful golf courses, which lies along the gently rolling foothills of the Coast Range very near the Pacific Ocean. Clusters of magnificent oaks and sycamores line the undulating fairways of the 100-acre course, which is modeled after St. Andrews of Scotland. The Valley Club course is never crowded, its 350 members being well-to-do, influential people who insist on privacy and the freedom to play golf far from crowds.

The rich rural community of Montecito which adjoins Santa Barbara enjoys one of the most favorable climates in the country. Coastal moisture, plus cooling summer fogs and an average of 17 inches of rainfall annually. When the temperature reaches 80 to 85 degrees, Montecito's residents imagine they are having a hot spell.

This idyllic countryside does have a problem, one shared by the Valley Club and the community of Montecito. Both are suffering from a sudden shortage of water, a moisture famine that is likely to become more severe. Water is rationed. Violators face fines and even jail terms. At present homes cannot be built in the area, which is served by the Cashuma Dam reservoir to the

west. The region has been developing rapidly and there is heavy use of water for agriculture.

Golf superintendent Don Lokey of Valley Club is facing the problem head-on. He saw the possibility of a water shortage more than two years ago while planning a new irrigation system for the course.

"We asked that the design of our new system include the ability to cut back to meet such a shortage," he recalls. "But we didn't think it would come this quickly."

Now Lokey has been handed the not entirely welcome opportunity to test his theory that "golf courses in general get too much water." He will try to find out how little water he can get by with without having bad looking turf. The research project should be of considerable interest to golf superintendents everywhere.

Lokey's first step is calibrating all parts of his new irrigation system so that he will be able to control accurately its water output and can link the output accurately to the meter reading. He must know this, he emphasizes, in order to learn how little water he can use to maintain his green golfing pastures. Among the devices he is using to get his answers are calibrated cups, like rain gauges.

Lokey, who originally was an ornamental horticulturalist and became a golf superintendent by acci-

dent, has an engineering turn of mind. He came to Valley Club more than three years ago to help plan the new irrigation system. The decision to replace a golf course irrigation system is a major one. But it wasn't too difficult to make in this case. The old, patched-up system was wearing out and getting too unwieldy.

It had been installed in 1929 and was designed on the old principle, Lokey recalled, "that you watered only tees, landing areas just before the greens, and the greens. There was very little sprinkler coverage and you relied a lot on the coastal dampness."

As it became necessary to water more and more of the course, including the fairways, extensions were added to the old cast iron pipe system. All kinds of sprinkler heads were used. Gardeners worked night and day to maintain watering schedules. Labor and water costs mounted. Then came early warnings of a possible water shortage. A new, much more efficient irrigation system became mandatory.

"To get the accuracy in the system that we considered necessary," Lokey said, "we asked all manufac-

*A battery of rotor pop-ups operating on the sixth fairway at Valley Club in Montecito, Calif. Each fairway has its own separate automatic controller.*

# Meet the NEW TMS "Strong Boy"

JOHN L. SULLIVAN...the BOSTON "STRONG BOY"

"I can lick any man in the house" was his famous cry. That he could, reigning as undefeated king of the heavyweights from 1882 to 1892. An indefatigable fighter, he took on all comers.

A new hydraulic dump bed designed for use on pick-up trucks--1/2, 3/4, or 1 ton size. The TMS "Strong Boy" can hoist three tons and haul 52 bushels (equivalent to 65 cu. ft.) Optional side boards increase capacity to 87 bushels (or 109 cu. ft.)

The TMS "Strong Boy" has strong competitive advantages both in price and quality construction. No wonder it is sweeping the country in different industries for a variety of uses.

Both large and small contractors have found the TMS "Strong Boy" does many jobs that

once required tying up expensive equipment or many hours of high-priced labor.

Farmers, ranchers, and lawn maintenance experts use it for quick, easy loading and unloading of fertilizer, feed, etc.

The TMS "Strong Boy" has twin cylinder hydraulic lift, a 14 gauge steel body and a double-hinged tail gate. It is equipped with a sliding gate (9" high, 12" wide) and spreader chains.

turers we felt were reputable to send us samples of their sprinkler heads. We said we'd like to test them.

"We took each head and set it at the manufacturer's recommended pressure. Then we took a vessel, turned the head upside down in it, got a stopwatch, and turned on the water to the recommended pressure. We watched to see how many gallons came out.

"One of the heads missed its mark by 25 percent! How can a de-

sign engineer for an irrigation system take those specs and be successful?

"From the tests," he said, "we selected our system. The selection was based on the performance of the company's head. It produced the amount of water it was supposed to."

Then the company was given the task of designing the irrigation system. It was decided that 1,228 sprinklers would be required to ade-

quately cover the course. There was much discussion over how far apart to space them. This is interpreted as the irrigation ratio. Common but poor installations have ratios as high as five to one Lokey said. This means that for every inch of water you put on the dry spots, in a typical pattern of four sprinklers, you must put five inches on the rest of the turf. Many systems are four to one, which is not much better.

The ideal, according to Lokey, is one-and-a-half to one. But that's about impossible to achieve with the present design standards. The new system at Valley Club is two to one. A group of four sprinkler heads farms corners of a rectangle 60 by 70 feet on a side.

Lokey would like the spacings to have been closer than 60 by 70 feet, but he acknowledges that his two to one system is surprisingly effective.

The Formost Construction Company of Venice, California, contracted to install the new system and was able to do so without shutting the course down. Plastic pipes were laid throughout, the largest mains being eight inches in diameter and the smallest, four. The pipe was laid three feet deep. Some of the digging was rugged. Many rocks had to be removed.

The new system was designed by Rain Bird Sprinkler Mfg. Corp., Glendora, Calif. to irrigate more than 100 acres of turf. Pressure is maintained by a booster pump with a capacity of 1,350 gallons per minute. It is expected to boost 75 psi water from the main Cachuma line to 105 psi, but Lokey admitted he has not yet achieved this goal.

When the rationing program was instigated after the new irrigation system had been installed, it sounded at first as if the Valley Club would be getting a generous allotment of water. The amount was to be based on the amount of water used over the years. This turned out to be less than bountiful. The meter on the old system had been faulty. And, as Lokey explained, when water meters go awry, they don't give you less water than they record, but most often much more.

Thus the Valley Club historically used more water than it is now allowed — which is 200 acre feet a year. It's apportioned into three-

Valley Club superintendent Don Lokey testing moisture level with a moisture sensing instrument to determine water required for the next irrigation cycle.

# THE 44-INSECT INSECTICIDE.

# SEVIN® CARBARYL INSECTICIDE

## For trees, ornamentals, and turf.

One solution versus 44 problems. Those are pretty good odds.

Especially since you can't always be sure which insects will threaten the valuable trees, turf and ornamentals you protect. And people enjoy.

This broad-spectrum control with SEVIN® carbaryl insecticide takes some of

**STOP! ALL PESTICIDES CAN BE HARMFUL TO HEALTH AND THE ENVIRONMENT IF MISUSED. READ THE LABEL CAREFULLY AND USE ONLY AS DIRECTED.**

the chance out of your job.

Its versatility also lets you cut down on the need for a large chemical inventory.

Why use an array of different brands with different instructions, if you can do the job effectively with a single product? You'll enjoy less nozzle changing, chemical switching and tank flushing. All good reasons to rely on dependable SEVIN.

Use it in any of its available forms to suit your needs - choose from wettable powders, flowables and liquid SEVIMOL® 4.

And SEVIN is compatible with many commonly used fungicides, miticides and other insecticides.

With the increased awareness and concern for protecting the environment, it's nice to know that SEVIN is biodegradable.

And, when compared with many other insecticides, SEVIN ranks low in toxicity to people, animals, birds and fish.

PLANTS	INSECTS CONTROLLED

Is your new bluegrass plagued with weeds?

# FYLKING IS PURE.

The famous Swedish beauty, Fylking Kentucky bluegrass seed contains no annual bluegrass (*Poa annua*), bentgrass or short-awned foxtail. Strict controls and countless inspections guarantee the physical purity and genetically true seed typical of Fylking Kentucky bluegrass. These procedures make your seed dollars go farther. Fylking is one of the lowest priced elite bluegrass seeds on the market.

Fylking, used as the backbone of your seed mix, will produce a lawn that will make you proud. Fast germination and growth, development of a dense, compact rhizome and root system, make Fylking a natural choice. Low-growing, low-mowing (low as 1/2 inch), more disease, drought, smog and traffic resistant. Fylking is persistent, brilliant green from early spring to late fall.

For a purely beautiful, tough turf, specify Fylking Kentucky bluegrass. Available at your local wholesale seed or sod distributor.

**FYLKING  
KENTUCKY  
BLUEGRASS**

U.S. Plant Patent 2887

Another fine quality product  
of Jacklin Seed Company.

Fylking plants started from "original" breeder's seed in sterile greenhouse media are transplanted to fumigated soil in isolated breeders block for seed increase.

Individually harvested, progeny seed from each original "mother plant" is cross tested for genetic purity. Physical and genetic purity are carefully maintained by constant evaluation, chemical spot roguing and physical removal.

month blocks that cannot be carried over. If they could, Lokey is certain he could work more effectively with the rationing schedule.

"I sympathize with the water department," he declared. "We'd voluntarily curtail our present amount of water rather than let the community run short — even though it's painful. And it is painful."

Lokey and his club committees have taken the rationing philosophically.

"We've had shortages before and survived them," he said. "And we can do it again. During one shortage only the tees and greens were watered."

Lokey is convinced that with the new, more efficient irrigation system and tensiometers he can make it. He has the advantages of humidity, little evaporation, and a variety of fairway grasses that have been allowed to grow and mingle as they wish — bluegrass, bent and Bermudas. They grow in Montecito beautifully. There also is some native annual bluegrass that does very well. The greens are all of seaside bent; they were planted forty years ago. The grasses don't require heavy watering because of the mild climate.

After it was installed, Lokey began calibrating the new system immediately so that the water output would agree with the meter reading. He makes daily checks of the amount of water used.

"We're coming pretty close to knowing how much water we're putting on," he commented. "Our rain gauge-like calibration cups are helping."

As far as depth of watering, Lokey isn't interested in getting it eight inches deep. His turf doesn't have roots down there. But he is interested in three inches, and wants to keep things moist at least to that depth. The Montecito soil is good at holding moisture, unlike the sandy soils of many desert golf courses.

At present, the watering periods are two cycles of 20 minutes each every other night. The whole course gets this amount, which in summer is about .84 of an inch a week.

"I can go our right now and find a dry spot, put tensiometers on it and get virtually zero," Lokey says.

*Clubhouse complex at Valley Club in Montecito, Calif.*

"On a couple of them now I'm getting five centibars. I can get along beautifully with 20."

There are indications that he can reduce his water. But he doesn't want to cut back to the point where he's creating dry spots.

"On the average course where you find a dry spot, you just turn up more water," he said. "That's just a cover-up."

To make certain he stays well within his ration quota, Lokey has turned off sprinklers at the edge of fairways and in the roughs. Of the total of 1,228 sprinklers, he has cut off 286, explaining: "I'd rather have an area completely dead and try to balance the rest of the system so the parts that are watered look good."

As for the course's many great trees, they do better without watering. In fact, over-watering the course fosters the growth of fungus at the base of the tree trunks. Lokey's men are careful to keep the base of the trees as dry as possible.

"All courses have dry spots," Lokey said. "And when the greens committee jumps on a superintendent for this, he turns on more water. That ends the dry spots for a time, but it over-waters the course. Pretty soon you're standing with mud on one leg and dust on the other. The big problems are underpressure of water and over-spacing of sprinkler heads."

The spacing of heads of the key

to a successful irrigation system, according to Lokey.

Many system designers will space the heads too far apart so that they can bid a lower price for the system. It's the competitive thing.

He thinks golf management is willing to pay a higher price for well-spaced heads if the sales people would explain to them that they would save in the long run on water and labor. Clubs don't want to have to try to cover up for a poor system by over-watering. The original cost of additional sprinklers and pipe is soon made up in savings in water. And where water is scarce, there is additional incentive for an efficient water system because it saves water. The irrigation equipment is excellent and can perform much better with well planned installations.

Lokey thinks the locations of sprinkler heads should be determined with transits, instruments that civil engineers use. This isn't done. The common practice is to line up the sprinkler sites with the eye and plant flags on the selected sites. Sprinkler heads located by that method invariably are off by a few feet and that can upset the pattern, he said.

One thing appears certain. The Valley Club's irrigation system will be one of the most efficient in the country when Lokey completes his research project. And not many systems will be as well understood. □

# Japanese Beetle Parasite Found in the Northeast

As was reported in the January news section of WEEDS TREES & TURF, a new nematode parasite has been discovered in the Northeast. The parasite is being studied as another possible natural method to control the insect. Since the January report pictures of the parasite attacking the larvae of the beetle have been taken at the U.S. Agriculture Department's Japanese Beetle Laboratory at the Ohio Agricultural Research and Development Center in Wooster, and the pictures are published on this page.

Apparently, Japanese beetle larvae become infected by the merimithids in late summer. Laboratory entomologist M. G. Kelin said the merimithids emerged in March from larvae collected in October and held in cold storage until January. Parasites emerged in mid-May from larvae collected in April.

The thread-like merimithids, about nine inches long, could be observed coiled inside the collected larvae. At the time of emergence, individual grubs showed little sign of life except feeble movement of the mouthparts. A single merimithid normally emerged from each grub, although as many as three parasites were recovered from one host. Most of the host larvae had completed their third moult when the merimithids emerged.

*The merimithids, about nine inches long, could easily be observed coiled inside the larvae since they extended from the middle region to the second-last abdominal segment.*

*Most of the nematode was found dorsally, though several strands were visible on the ventral side.*

*The merimithids emerged either through the intersegmental membrane of the first body joint of the legs or through the mouth of the larvae.*

# "Time is money in my book, so I feed trees with Jobe's."

Jack Fannin  
Superintendent  
Congress Lake Club  
Hartsville (Cleveland),  
Ohio

"Jobe's Spikes are clean and easy to use. They're a great time saver, so they're a money saver, too. Even inexperienced help can feed trees fast with Jobe's. There are no bags to lift or ingredients to mix. No drilling.

"We used them on Crimson King maples and Snow Drift crabapples. The trees had shown inconsistent growth for the past five years, so we applied 5 spikes to each tree the first week in November. By spring, we could measure the difference.

"Another advantage of Jobe's Spikes is very little loss through leaching. There's little if any run off in heavy rains. The fertilizer stays on target. Best of all, with Spikes we can keep exact records of how much fertilizer each tree receives over a given period of time, eliminating 'by gosh and by golly' methods."

Jobe's Tree and Shrub Spikes are easy, economical and effective. One spike per inch of trunk diameter feeds a tree for a full year. All you do is drive the Spikes into the ground. Tests at Purdue University have proven Jobe's as effective as drilled fertilizer. Write for the complete report.

Save time and money. Order Jobe's Spikes through your jobber or order direct. \$30 per case (105 spikes) prepaid. Minimum order, 5 cases. \$25 per case for 15 or more cases.

# Why TERSAN® fungicides give you **Total**

**LEAF SPOT** (*Helminthosporium* spp.) on bluegrass.

**DOLLAR SPOT** (*Sclerotinia homoeocarpa*) on bentgrass.

**TYPHULA BLIGHT** or Gray Snow Mold (*Typhula itoana*) on a fairway.

**LEAF SPOT** on bentgrass (melting-out stage).

**LARGE BROWN PATCH** (*Rhizoctonia solani*).

**TYPHULA BLIGHT** or Gray Snow Mold, close-up view.

**RUST** (*Puccinia graminis*) on bluegrass.

**FUSARIUM BLIGHT** (*Fusarium roseum* and *Fusarium tricinctum*).

**PYTHIUM BLIGHT** or Cottony Blight (*Pythium* spp.).

**TERSAN LSR** Turf Fungicide controls Leaf Spot and Rust. It is also effective against Large Brown Patch.

**TERSAN 1991 and TERSAN 75** effectively control Dollar Spot and Large Brown Patch. TERSAN 1991 controls Fusarium Blight.

**TERSAN SP** provides outstanding control of both Typhula Blight and Pythium Blight.

# Turf Protection.

You're faced with a lot more than one or two turf disease problems. That's why you need the DuPont TERSAN program. It gives you protection against just about every disease your course will ever encounter.

But you get more than proven, effective control with the TERSAN program. You get economical control as well. You use just the treatment that works on a given problem. There's no waste. No extra expense. You pay only for the specific treatment to control a specific disease.

And it's more effective. Because you zero in with prescription precision on specific diseases. You use one right treatment applied at the right rate at the right time to achieve the most effective control.

So, if you want to keep your course greener for less money, use the TERSAN

turf disease control program. It's the best way to obtain total turf protection against most disease problems. For complete details, contact your chemical supplier—or mail in the coupon.

*With any chemical, follow labeling instructions and warnings carefully.*

# How Mowing Affects Turf

The effects of mowing (height, frequency and equipment adjustment) on turfgrasses are usually detrimental. The results are reduced roots, rhizomes, carbohydrate storage and increased succulence. Aesthetic quality however, improves because of increased shoot density if height is lowered within the tolerance range of the species. Mowing is necessary to maintain a groomed appearance. Use of the turf dictates mowing management. Successful turf managers adequately compromise the physiological status of the plant with the demands of the clientele utilizing the facility.

**Cutting height.** Cutting height can be defined as the distance above the soil surface at which the turf is clipped. Turfgrasses vary in their tolerance to cutting height. Growth habit and location of leaf primordia dictate the height at which a species will best respond. Bentgrasses, for example, have leaf primordia located near the soil surface, while the primordia of tall fescue are about one inch above the soil.

Cultivars of the same grass also exhibit different tolerance to height of cut. The improved cultivars of Kentucky bluegrass (Pennstar, Merion, Fylking, Baron and many others) tolerate closer mowing than Delta, Kenblue and Newport. Although the location of leaf primordia is a partial explanation, leaf angle is probably more important in explaining these cultivar differences. Improved cultivars have leaves that, once they are fully expanded, are almost parallel to the soil surface. During mowing, these leaves are clipped only a slight amount each time and consequently they are able to maintain photosynthesis on a unit area basis and continue to produce carbohydrates. This minimizes the utilization of reserve carbohydrate for new leaf growth and allows root and rhizome growth to continue. By contrast, when cultivars that have upright leaves are mowed closely, little leaf area remains and utiliza-

tion of reserve carbohydrate is required to produce new leaves. While these new leaves are being produced the photosynthesis per unit area is reduced as is root growth. Turf resistance to environmental stresses (particularly drought and heat) is closely related to carbohydrate status and root growth.

**By Thomas L. Watschke  
Associate Professor  
Turfgrass Science  
Penn State University**

The top to root ratio of all turfgrasses is altered as the height of cut is lowered. The closer the cutting height is to the soil surface, the shorter the root system becomes. A foliar priority for reserve carbohydrate is the most commonly cited reason for the decline in roots. Clipping may also affect the concentration and translocation of root growth regulators that are synthesized in leaves.

Rhizome and stolon growth do not have as direct a relationship with defoliation as root growth. A lowering of cutting height within the tolerance range for a given species can actually increase growth of vegetative propagules. For example, it is a common practice to mow closely during the early establishment of creeping bentgrass to increase stolon growth. Kentucky bluegrass and creeping red fescue have rhizomes that provide a source of new plants when the turf becomes injured. Continued close mowing can reduce rhizome production and reduce overall sod strength. This can lead to poor footing which can cause serious problems, particularly on athletic fields.

Succulence of turfgrasses can be increased when the cutting height is lowered. A succulent condition, combined with reduced rooting places the plant in a weakened condition. Resistance to stress and dis-

ease attack thus becomes lowered at a time of the year when turfgrass pathogens are most active. Consequently, the severity of turf diseases is increased for a given plant species when it is maintained at the lower end of its clipping tolerance range. Increased succulence of tissue also increases the demand on the root system for adequate moisture to maintain turgidity. Therefore, wilting occurs more readily when turf is clipped closely. The simultaneous conditions of reduced rooting and increased succulence requires intensive irrigation management to maintain turfgrass quality.

Some turfgrasses, particularly low growing types like the bentgrasses and Bermudagrasses can be adversely affected when the cutting height is too high. Puffiness and thatch accumulation often occur which diminishes turf quality, returning these low growing turfs to their proper height must take place over a fairly long period of time to avoid scalping.

Not all effects of mowing are deleterious. Closer mowing within the tolerance range of a species can stimulate tillering and consequently increase shoot density. Increased density improves appearance, provides a more playable turf, and is a positive response to mowing. This response is positive only as long as the height is still within the tolerance range for the species. This phenomenon often becomes an important management tool to manipulate plant competition. Tall fescue competition can be reduced in a Kentucky bluegrass stand if the mowing height is lowered to near the limit of the bluegrass tolerance. This may be particularly valid when accomplished just prior to winter.

Another example of the effects of mowing on plant competition would be a mixed stand of Kentucky bluegrass and annual bluegrass. When mowed closely, *Poa annua* will increase in shoot density, while Kentucky bluegrasses will decrease. Although the Kentucky bluegrass will continue to produce

## Rainmakers since 1933

For 42 years, the expert on the green has been Rain Bird. It's the name that has come to mean the most complete line of quality equipment available, backed by the kind of reliability you've come to depend on. And to insure the maximum

return on your design, landscape and maintenance investments, we're always standing by with solid service support.

When you won't sacrifice 42 years of quality, leadership and service, call on Rain Bird. Rainmakers since 1933.

# How to protect your turf from the world's toughest critic: the golfer.

With this formidable array of armament on your side, you have a broad spectrum turf management program that can ward off just about any attack from weeds or fungi or golfers.

And you can manage it all with surprising economy. Chipco® products protect the green of your turf without straining the green in your budget.

Just try any one of them, and you'll want the entire arsenal. Because once you use a Chipco anything, you'll soon be using Chipco everything else.

**Chipco Buctril®** gives early control of broadleaf weeds in newly planted grasses for sod or seed production.

**Chipco Turf Herbicide MCP** controls clover, chickweed, knotweed and other surface creeping weeds and is safe and effective for use on most bent grasses.

**Chipco Turf Kleen** is a broad spectrum herbicide that controls broadleaf and surface creeping weeds with a wide margin of safety around trees and shrubs.

**Chipco Spot Kleen** is a systemic fungicide for control of dollar spot, Fusarium blight, stripe smut, large brown patch and copper spot.

**Chipco Thiram 75** prevents and controls snow mold, large brown patch and dollar spot. Used with Spot Kleen, it offers a complete disease control program.

**Chipco Microgreen Liquid** prevents chlorosis which results in long lasting deep green color, more root growth and less desiccation.

**Chipco Turf Herbicide D** is a general purpose broadleaf herbicide ideally suited where economical control is desired.

**Chipco Spreader Activator** is a quality adjuvant to increase the efficiency and effectiveness of turf chemicals.

**Chipco Crab Kleen** gives economical and selective post-emergence control of crab grass, chickweed and other grassy weeds in established turf.

Rhodia Inc., Agricultural Division, Monmouth Junction, New Jersey 08852

rhizomes, the *Poa annua* will maintain a competitive advantage above the ground.

Leaf texture is also affected by mowing. Unclipped turf of any species has wider leaf blades than when it has been mowed. In general, the closer the mowing the finer the texture. Finer texture is desirable in most cases. The fine textured leaves of close clipped bentgrasses have better putting quality than would the leaves of unclipped bentgrass. Annual bluegrass leaves become quite fine textured when mowed at putting green height. High cut turf has wide leaves which provides good light interception. However, since closer mowing can increase the number of shoots per unit area, any disadvantage associated with reduced width would be offset.

**Frequency.** Frequency and cutting height are interrelated. Generally, as the mowing height is lowered, frequency must be increased to maintain quality. Mowing frequency is primarily dictated by shoot growth rate.

To avoid scalping, the frequency must increase when growth rate increases. As a general rule, no more than one-third of the foliage should be removed. When frequency does not change commensurate with an increased shoot growth rate, each mowing will remove an excessive amount of leaf tissue. The plant is then given an unnecessary physiological shock. Defoliation of three-fourths of the leaves can result in almost complete root growth stoppage for as long as two weeks. Reserve carbohydrates are translocated and utilized for new

shoot growth. With severe scalping, root growth not only stops, sometimes there can be considerable root death. When this occurs, the turf stand will not tolerate stresses and is more disease susceptible.

Turfgrasses vary considerably in their shoot growth rate. Tall fescue and ryegrasses can have a rate nearly three times more rapid than bentgrass. Frequency, however, is usually increased on the bentgrass because of the closeness of cut, particularly on golf greens. Nitrogen fertility greatly increases the shoot growth of all turfgrasses. At times changes in the nitrogen fertility program can manipulate plant growth rate and affect mowing frequency.

Generally, the effects that mowing frequency have on turf are the same as those previously cited for mowing height. When mowing fre-

The effects of mowing on the photosynthesis ( $P_s$ ) per unit area of upright type Kentucky bluegrasses (A) compared to those more decumbent (B).

The effect of close mowing on reserve carbohydrate depletion in upright (A) and decumbent-type Kentucky bluegrasses (B).

The effect of mowing height on root growth.

The effect of mowing height (in the tolerance range for a species) on shoot density.

quency is increased, the shoot growth rate will usually decrease. The advantage of this reduced shoot growth rate with more frequent defoliation is that the amount of leaf removed each mowing is small, and the clippings will fall down through the leaf canopy. This can eliminate the necessity of catching clippings. These small pieces of leaf clippings are approximately 70 percent water and easily decomposed compounds. Consequently, decomposition occurs rapidly and only contributes a small amount to thatch.

**Mower adjustment.** Adjustment for rotary mowers only refers to blade sharpness. Dull rotary mower blades tend to shred grass leaves rather than cut them. The fiber content of the vascular system (veins) is high and resists cutting, and consequently will shred. A severe reduction in aesthetic quality will result because the exposed shredded veins dehydrate and turn brown. These bruised, shredded leaves are not only unattractive, but provide points of entry for pathogens.

Reel-type mowers that are not

sharp can result in a "banding" of leaf blades which distracts from the appearance. Reel mowers that are sharp, but out of adjustment, do not cut cleanly, leaving a ragged edge. Misadjustment can also result in "rippling" of the overall canopy

which is unattractive even though the cut may be satisfactory. Turf that has a high leaf fiber content (ryegrasses and tall fescue) must be cut with sharp, properly adjusted equipment to insure optimum appearance. □

# How to "bank" or transplant trees more profitably

The answer is simple . . .

**Vermeer Tree Spades.** Ask anyone who owns a Vermeer, and he'll probably tell you he bought it for two reasons. **First, because of the tremendous demand for "instant shade"**. More and more nurseries, landscapers, tree farms and developers are using Vermeer machines to fill orders on large trees, or to "bank 'em" for peak demands.

**Secondly, since Vermeer Tree Spades require less labor, you actually save money.** With any of five, patented Vermeer

models, you can "bank" or transplant trees up to 6" in diameter in minutes. Hydraulically-operated steel "spades" do all the work gently and neatly. Find out why more trees are transplanted by Vermeer Tree Spades than all other machines combined. Write, or better yet, call "The

Diggin' Dutchman" for complete information and a FREE demonstration. There's a Vermeer machine to fit your operation.

# Entomologists Continue Study Of Turf Pest *Ataenius Spretulus*

Extensive damage to golf course turf in the East and Midwest has been the result of the appearance of a new, small white grub, *Ataenius spretulus*. The new turf pest has caused considerable damage to fairways, greens and tees in areas ranging from Illinois to Michigan to New Jersey.

Dr. Kent Beckman, turfgrass specialist for TUCO, Division of the Upjohn Co., at Kalamazoo, Mich., told WEEDS, TREES & TURF the grub attacks the tender feeder roots of grass and usually works about a half-inch below the soil surface. "Damage first appears as localized dry spots," he said. "And many turf managers have made the mistake of irrigating the dry-appearing areas without investigating below the soil surface."

Dr. Beckman received his B.S. in forestry at the University of Washington, and his Ph.D. at Oregon State University majoring in biology, plant pathology and biochemistry. He has been involved in turf research for 12 years.

The grub pest particularly likes *Poa* and bentgrass turf, although it has been found in bluegrass and other grass species, he said.

He said the grub has probably existed in some areas before, but was usually identified as something else. He says particularly during the last three or four years that which was described as dry spots may have in reality been the results of the *Ataenius* grub. The grub's sudden wide-spread appearance was attributed largely to ideal weather conditions and a general lack of insecticide programs on fairways and cutbacks in other areas due to economic strains. Entomologists are currently studying the new pest in an effort to learn more about it. Turf conference programs recently have had many programs on the grub, and research on the grub is currently in the process of being funded.

"The adult is a small, black beetle that winters in grass clippings, debris and other such materials," Dr. Beckman said. "The adults come out of hibernation in the spring, lay their eggs in the turf, which hatch into their destructive larvae stage by late June and early July. The adult beetles can fly, so they are able to spread rapidly. If growth conditions are favorable, such as with warm and moist weather, the adults emerging in July will again lay their eggs for a second generation to follow in August."

He said the tiny, white grub is about the same thickness and length of a sharpened pencil lead. He adds that it also has a brownish head and a dark posterior like that of more common white grubs.

"Damage may first appear to be turfgrass wilting about the size of a golf ball which can spread to cover several square yards," he said. "And although it only takes about 30 grubs per square foot to begin

damaging turf, as many as 50 per square inch have been found." Early control is important and special care must be made to insure a complete kill as resistance to various insecticides has been observed.

"Damage from the grub appears in July or August, so one should begin looking for the pest in three-day intervals during the middle to latter part of June," he said. "If a dry-appearing area is spotted, positive identification can be made by pulling up small patches of turf. Turf that has been invaded by the tiny grub will peel back like carpet, he said, and the grubs can be seen working from the soil surface through the first half-inch of the soil."

Because the grub has demonstrated a resistance to some insecticides, control in some areas has been erratic.

"High populations of the grub have been found in areas that had been previously treated with dieldrin, heptachlor and chlordane," he said. "Resistance to these cyclodiene insecticides has been found on courses in Ohio, Connecticut, New York and New Jersey."

"One of the best materials available for controlling the pest is Proxol 80 SP," Dr. Beckman said. "It is essential to get the chemical through layers of thatch to where the grubs are working in order to obtain control of white grubs and the mini-grubs are no exception. Water will carry the material down to the grubs which explains why water-soluble products have proven so effective."

He said the chemical should be applied at 3 3/4 ounce per 1,000 square feet, or equivalent per acre, either early in the morning or late afternoon, followed by thorough irrigation of the turf which carries the material down to the grub feeding zone. He advises inspection 12 to 24 hours following chemical applications to insure that desired levels of control were obtained. □

Dr. Beckman

STRAIGHT TALK FROM YOUR DITCH WITCH MAN

**"My job is helping you do your job!"**

"All equipment dealers talk about service after the sale. Let me tell you what service means to me. Selling and servicing Ditch Witch equipment is my *only business*. The way I see it, my job is helping you do *your* job. I do that by providing the quality equipment you need and helping you maintain it. Ditch Witch equipment is built to last. It's basic design makes routine maintenance easy. But, like any construction equipment, it sometimes requires repair service. I maintain a full inventory of Ditch Witch parts and a staff of professional factory-trained service personnel who are ready to serve you wherever and whenever you need them. At Ditch Witch, we tell it to you straight!"

**Call (800) 654-6481 Toll Free** for the name of the dealer nearest you.

Professional Ditch Witch sales personnel know their product line and the needs of customers in their territory.

Ditch Witch dealers minimize your down-time by providing rapid parts service.

The factory-trained service department is ready when you need it — in the shop or in the field.

*Ditch Witch . . . equipment from 7- to 195-HP.*

# to get rid of

## TRIMEC is number 1 because:

- Controls the widest range of broadleaf weeds.
- Gets "hard-to-kill" species without repeated applications.
- Gives wide margin of safety to lawn grasses.
- Minimum hazard from root absorption to flowers and ornamentals, deciduous and coniferous.
- No vapor action after application.
- Effective weed control at wide range of temperatures.
- Sequestered to overcome water hardness problems.
- Treated areas may be seeded within two weeks.
- Non-flammable and non-corrosive in use.
- Product stable for several years but subject to freezing at temperatures below 32° F.

## It kills these weeds, and more:

- |                       |             |             |
|-----------------------|-------------|-------------|
| Common Chickweed      | Bedstraw    | Pigweed     |
| Mouse-Early Chickweed | Bindweed    | Plantain    |
| Lambsquarter          | Clover      | Purslane    |
| Milford (Yarrow)      | Dandelion   | Ragweed     |
| Morning Glory         | Dichondra   | Smartweed   |
| Shepherd's Purse      | Ground Ivy  | Sunflower   |
| Spotted Spurge        | Heal-All    | Thistle     |
| Carpet Weed           | Henbit      | Wild Garlic |

# TRIMEC

## broadleaf weeds

### Provides maximum safety

TRIMEC, properly applied, is harmless to grasses, trees, flowers and ornamentals because root chemical absorption is minimal. All components are biodegradable.

### And it costs even less!

TRIMEC's cost-per-acre of weed control is less than any other broadleaf herbicide for two reasons: First, a single application usually does the job, saving labor, and (2) the light chemical dosage required reduces the material cost proportionately.

TRIMEC's efficiency results from the synergistic (more-than-additive) power of its 2,4-D, MCPP and Dicamba ingredients, balanced in our exclusive, patented formulation. **NOTE:** For sensitive grasses, a *Bentgrass* formula is available.

“ I've used Trimec Bent for quite a while and it takes care of almost all my broadleaf weeds, particularly English Lawn Daisy, which is a tough one to get rid of. In problem areas I spray spring and fall. Touch-up work is done in the spring.

**Ron Zwiebel, President**  
Chem-Care Lawn Service of Alabama, Inc.  
Birmingham, Alabama.

... of all the broadleaf weed controls that I have tried, I think TRIMEC is the finest broadleaf herbicide on the market today.

**Keith Dones, Agronomist**  
Department of Parks  
Louisville, Kentucky

TRIMEC has been thoroughly field tested and proved in all parts of the United States, in all kinds of weather. Its effectiveness in cool 50°-range temperatures is firmly established, allowing early-spring and early-winter use. TRIMEC is the best available weed control for golf courses, lawns, cemeteries, along highways, on sod farms, in public parks — wherever immaculate turf must be maintained. *The one best way to be convinced is to test it. Test it yourself.* TRIMEC, the king of broadleaf herbicides.

For information and prices, see your local authorized TRIMEC distributor.

# He Treats Trees Like People

Jimmy J. Harrod Sr., who owns and operates C & H Tree Experts in Fort Worth, Texas, is a warm-hearted, down-to-earth arboriculturalist who treats trees and plants like they were people.

One of the few people still around today who believe a handshake is as good as a contract, Harrod punctuates his almost constant dialogue with colloquialisms that will sometime hit you between the eyes like a migraine. He will tell you, for instance, that the best way to get rid of bag worms is "with a hammer and sidewalk," but he will further explain the proper sprays to use if you prefer.

Harrod has worked in a supermarket, operated a root beer stand, washed dishes, sold tobacco, and been a sky diver and a personnel consultant. He got his first taste of arboriculture while attending the University of Heidelberg as a foreign exchange student. He started out by taking general courses just to get an education. It was during his sophomore year that Harrod met the forest master of Germany's Black Forest.

"This old man knew those trees just like they were his kids," Harrod told WEEDS, TREES & TURF. "When they had a wind storm, they got someone out there raking leaves and cleaning it up. It is really a cared-for place." But it was not until some years later when he met who

---

*'Why aren't you in the tree business? You have the education for it, and you can sell a row boat to a desert rat.'*

---

was to be his future partner in business that he realized there was money to be made treating trees.

"I got to talking to this guy one day and he started putting his terminology on me. I just talked back in the same language. He said, "Why aren't you in the tree business? You have the education for it, and you can sell a row boat to a desert rat." So a partnership was formed six years ago. Harrod since

has acquired all interest in the company.

"I sold nearly everything I owned to buy equipment, spending it for chains, saws, ropes, spurs, climbing gear and insurance," he said. "I even sold my wife's Volkswagen." Today, his equipment is worth around \$60,000, including trucks, chippers, a company car, two different spray rigs, a jeep, \$3,000 worth of chain saws, and \$1,000 in hand saws. At times he has had as many as 15 men working for him. "The personnel factor is one of the biggest problems there is. If I had the key people I could get more business than I could take care of. A lot of guys are going out of business because they can't get help.

"But they have to do it my way," he said. "There is a proper way to do the work. Some people leave brush in the yard or stuff in behind shrubs. We don't do that. If we take it off, we rake that yard when we are through. If the chipper makes a mess in the street, we sweep the street up."

Harrod attends professional conferences "just to pick the minds

# Why let algae limit your pond use?

OPEN THE WAY TO  
A PROPER ALGAE-FREE  
POND ENVIRONMENT WITH

# HYDROTHOL<sup>®</sup> 47

Without proper control algae can:

1. Restrict or clog irrigation equipment
2. Reduce water holding capacity of the pond
3. Create an imbalance in fish population
4. Limit swimming enjoyment
5. Tangle fishing lines

Hydrothol controls many types of algae. It helps reduce maintenance and lower operating costs while improving the aesthetic value of the pond.

Hydrothol is easy to apply in either liquid or granular formulations. It is effective and fast acting.

Before using be sure to read  
and follow directions  
 and precautions on  
the label of the product.

of the older members who have been in trees so long they are bent over like gorillas." He said, "I like to find out what they did way back when there wasn't all the modern equipment and chemicals around to combat disease of trees. I like just listen-

*Harrod attends professional conferences 'to pick the minds of the older members who have been in trees so long they are bent over like gorillas.'*

ing to them." And he makes good use of the information obtained from these conferences.

Harrod's concern today is for the consumer. "The consumer is getting ripped off by the so-called garden supply centers around the country," he said. He feels there are no competent employes in these centers to give proper advice to the consumer with a garden problem. "If you go into a discount center and

*Cement, divided with felt soaked in creosote, fills about five feet of the main trunk of this old oak tree. Harrod says the tree has been healing for about 25 years.*

look at the quality of plants and ask pertinent questions about certain diseases, see if you can get an answer. If you buy a spray, take it home and apply it and it doesn't work, the tendency is to go back and buy something else. No one can explain proper sprays or methods at these places," he said.

One problem encountered by Harrod is when he sprays a tree, the customer expects the trees or plants to be free of insects for the entire year.

"With the rains we had last year, for example, that is impossible" he said. "They want us to come out and spray one time, and they they want us to come back and spray 10 times more for free. We cannot do that. You need to spray from three to eight times a year, with normal weather."

Some clients expect Harrod to come out to their homes with a one-shot solution that is going to make a tree that has been dead three weeks come back to life. "And we cannot do that. On the other hand, some call me in time to save a tree, but they want to know if I can guarantee

that I can save the tree. That is just like asking a doctor if he can guarantee saving a life."

He does not claim to be a miracle-worker. "I know my limitations," he said. "All I want is

*Colloquialisms that hit you between the eyes like a migraine — the best way to get rid of bag worms is 'with a hammer and a sidewalk.'*

to have the best service available to people who really have a problem — to go out and do all I know — prune their trees properly, feed them properly and shape them." He says he may not have all the solutions to plant problems, but if he doesn't, you can bet he knows where to go to get the right answers. "I want to retire knowing that I have done the best I could have possibly done," he said. □

# Take Away Spray Worries. Add Exhalt 800.

"Our members expect the course to be in top playing shape at all times. This year, I made no changes except for adding Exhalt 800 to our regular sprays. That change made a real difference. Hard-to-maintain places are in better condition; in fact, so are all greens and fairways. I'll continue using Exhalt 800. I'm convinced."

Robert DePencier, Golf Course Supt.  
Westchester Country Club Rye, N.Y.

"Two years ago, I began testing Exhalt 800 with my fungicide sprays. The results were so conclusive—in a period of severe disease pressures on healthy turf—that I now include it in my regular spray applications. Our greens and fairways never looked better or played as well."

Ronald C. Boydston, Golf Course Supt.  
Rockland Country Club Sparkill, N.Y.

Your pesticide keeps working longer, when you add Exhalt 800 Sticker Extender to the solution.

Even if it rains after only an hour!

Each particle of the pesticide is encapsulated. Held in contact with each leaf, where it can continue to do its job. It even flexes as the grass grows, to give you better protection. For a longer time.

There's another benefit as well. By giving you longer control periods with your pesticide, we help give you better control over your budget. No need to re-spray after an unexpected shower.

Easy to use. Mix 1 pint per 100 gallons of pesticide solution.

Easy to clean. Rinse equipment with water while it is still wet. Residue won't damage equipment or clog it when next used.

Exhalt 800. The Sticker-Extender that gives you Protection-Plus. Minus worry.

Sticker-Extender

# Fertilizing Economically

Soil condition, environmental conditions, management program and turfgrass requirements are as important as cost per unit of fertilizer.

By Dr. James A. McAfee  
Texas Agricultural Extension Service  
Renner, Texas

When discussing the economics of a fertilizer program, we usually spend most of our time talking about cost per unit of fertilizer. While this is an important point, there are several other factors which affect the economics of your fertilizer program. Factors such as soil condition, environmental conditions, management program, turfgrass requirement, etc., will all have a large effect on how efficiently your fertilizer is being used. This is one of the major points I would like to cover — getting the most efficient use of the fertilizer applied. Learning to combine the best buy cost wise along with maximum efficiency is what every turf manager should strive for.

The chemical, physical, and available nutrient level of the soil in which the turfgrass is grown will have a large effect on your fertilizer program. Of the soil chemical factors, soil pH (soil reaction) will play a big role in how efficiently the applied fertilizer is being used by the plants. Soil pH is a term used to express the acidity or alkalinity of the soil. A pH of 7.0 is considered neutral, while anything below 7.0 acid and anything above 7.0 alkaline. Soil pH is expressed in logarithms. What this means is that a pH of 6.0 is ten times as acid as a pH of 7.0 and pH of 5.0 is one hundred times as acid as a pH of 7.0. This is why it is so important that the pH is not allowed to become

highly acidic. At this point, it takes considerably more time and limestone to neutralize the soil. (Amount of lime applied to adjust pH should always be based on results of soil tests. Most states have facilities for conducting these tests.)

Acidic or alkaline soil conditions affect nutrient uptake in many ways. Under acidic soil conditions, much of the phosphorus in the soil is unavailable for plant use. The phosphorus ion forms highly insoluble complexes with iron and aluminum ion which cannot be absorbed by the plant. Root growth, especially root hairs, is greatly limited under acidic conditions. This reduces the amount of roots for nutrient uptake. Acid soils leads to thatch build-up. Activity of microorganisms which break down thatch is reduced under acid soil conditions.

Under both alkaline and acid soil conditions, the activity of soil microorganisms which are involved in nitrification, ammonification, nitrogen fixation, and other nutrient transformations are reduced. This includes release of nitrogen from ureaformaldehyde as well as the organic complexes in the soil.

A good means of illustrating the effect of soil pH on fertilizer efficiency is the following example: At a pH of 5.0, 33% of N-P-K in a complete fertilizer is not available for plant use. At a cost of \$180 per ton for the complete fertilizer, 33% of the money spent or \$59 per ton is

wasted. By simply maintaining the soil pH at correct level, this waste can be greatly reduced.

Physical condition of the soil will also have an effect on nutrient absorption by the turfgrass. Root growth is restricted under soil compaction. Some nutrients, especially phosphorus, are very immobile in the soil. Roots have to intercept these ions and with restricted root growth, chances of intercepting a phosphorus ions is reduced.

Waterlogged and/or compacted soils reduce plant respiration. Nutrient uptake is an energy process and plant respiration is necessary to produce the energy required for nutrient uptake. Therefore, under waterlogged or compacted soil conditions, efficiency of fertilizer use is reduced because of restricted root growth and reduced plant respiration. Provision for proper soil drainage and good cultivation practices (aerification) can thus help to increase efficient use of applied fertilizer.

Another means for more efficient use of fertilizers is by selecting the proper fertilizer analysis for your area. The fertility level for N-P-K will vary for different soils. Research has found that more turfgrass plants used on golf courses grow best at N-P-K ratio of 3-1-2 to 4-1-2. Application of supplemental nutrients should be based on supplying this ratio to the plants. Also, if soil tests indicate high to very high

# HOW TO MAKE A TOUGH JOB A LITTLE EASIER...

Whoever said that turf maintenance is easy never had a hundred acres of weed-infested grass to take care of. It's a tough job, no matter how you look at it. But we've got two herbicides that can help cut that tough job down to size. One is Ansar<sup>®</sup> 529 H.C., an effective MSMA liquid plus surfactant. Grasses like zoysia, bluegrass,

and bermuda are tolerant. But to crabgrass, nutsedge, and dallisgrass, it's deadly. The other herbicide is Phytar<sup>®</sup> 560, a non-selective liquid "trimmer" for complete top kill along sidewalks, fences, sand traps, and other hard-to-mow areas. For an effective, complete weed control program, simply ask for Ansar and Phytar. See, we've made your job a little easier already.

## ANSUL

The Ansul Company, Marinette, WI 54143. As with all registered agricultural products, read and follow label directions carefully.

levels of phosphorus and potassium on those areas where clippings are not removed, then nitrogen only may be applied. Thus by determining soil fertility level through soil tests, a turf manager may be able to save money on purchase of his fertilizers. All fertility programs should be based on results of soil tests. The difference in cost for supplying 4.0 lbs. per 1,000 sq. ft. on fairways for 18 hole golf course using ammonium nitrate vs. 18-18-18 at present prices is approximately \$1,300. If soil levels of phosphorus and potassium are high, this money could be saved or diverted to another project.

A turf manager should be aware of the different types of fertilizer carriers available and how they work. This is especially true for the three nitrogen carriers. These carriers work differently and to obtain the most efficient use of them, a turf manager must be aware of their characteristics.

First class of nitrogen carrier is the inorganic nitrogen carriers. Two examples of this type of fertilizer are ammonium nitrate and ammonium sulfate.

Important characteristics of this type nitrogen carrier are: (a) high water solubility, (b) rapid response, (c) high foliar burn potential, (d) short response, and (e) less cost per unit N.

Application of large amounts of these fertilizers should be avoided on soils high in sand content. This could lead to a high degree of leaching. However, under most fairway conditions, loss of nitrogen due to leaching is reduced considerably. Also, application of these fertilizers should be avoided when leaves are wet or on hot humid days. These fertilizers should always be watered in thoroughly after application to reduce the chance of foliar burn.

Due to the short response period, lighter and more frequent applications of these fertilizers will be required. While labor costs will be higher for these type nitrogen fertilizers (more applications), the lower cost per unit N will more than offset this difference. The difference between ureaformaldehyde vs. ammonium nitrate at 4.0 lbs. per 1,000 sq. ft. on bermudagrass fairways for 18 hole golf course is approxi-

mately \$3,000. Research has shown that with proper application of ammonium nitrate the same quality turf can be grown with the synthetic organic or natural organic fertilizers.

The second source of nitrogen carriers used on turf is the natural organic nitrogen carriers. Activated sewage sludge is an example of this type of carrier. Some of its characteristics are: (a) dependence on soil temperature, (b) low water solubility, (c) medium release, and (d) higher cost per unit of N.

These fertilizers need a soil temperature above 55° for soil microorganism activity to break down organic complex and release the nitrogen. In early spring when Bermudagrass needs nitrogen for early growth, release of nitrogen from these fertilizers is very slow due to reduced microorganism activity in the soil. These soil microorganism are most active at 90°.

With the low water solubility and reduced foliar burn potential, larger amounts of fertilizer can be applied per application. The response period for these fertilizers is intermediate between the inorganic carriers and the synthetic organic carriers. However, under high soil temperatures, nitrogen can be released at a fairly high rate by some of the natural organic carriers. Over application of these materials in summer months could lead to excess growth problems.

The third class of nitrogen carriers used on turf is the synthetic organic nitrogen carriers. There are basically two kinds: (a) primarily water-soluble, and (b) primarily water-insoluble. An example of water soluble synthetic organic nitrogen carrier is urea. This carrier reacts much like the synthetic inorganic nitrogen carrier. Ureaformaldehyde and IBDU are examples of the primarily water insoluble carrier. These compounds are considered slow release nitrogen sources.

Fertilizers containing ureaformaldehyde and IBDU are what we often refer to as specialized fertilizers for use in high maintenance turf. These fertilizers were developed after many years of research and offer several advantages. Some of these advantages are:

(a) reduced risk of foliar burn, (b) better spreadability, (c) less fire hazard, and (d) longer residual response. While the cost per unit N is much higher for these fertilizers, advantages listed above must be taken into consideration when selecting a fertilizer.

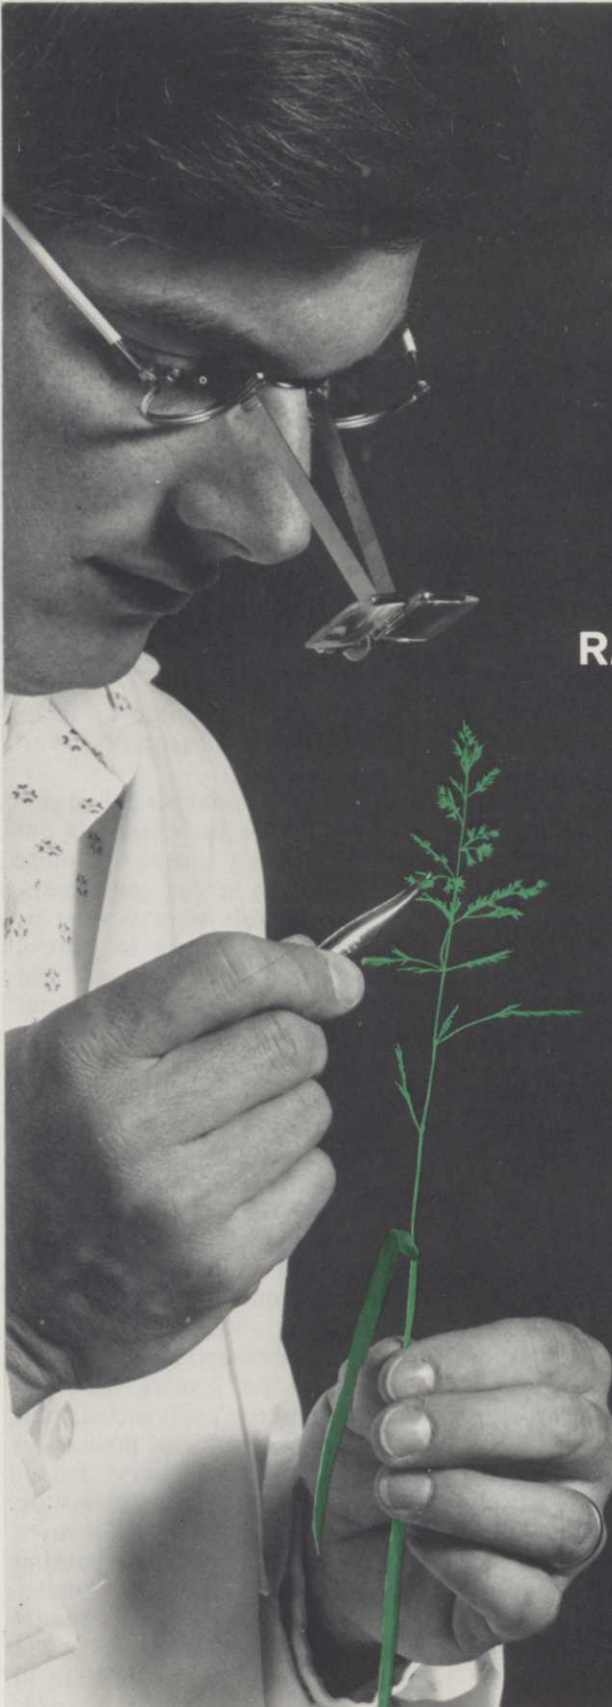

Release of nitrogen from IBDU and ureaformaldehyde is different and the turf manager should be aware of this difference. Ureaformaldehyde is dependent upon soil microorganism activity for release of nitrogen while IBDU is dependent upon a water hydrolysis reaction and is not as dependent upon soil temperature. This means that IBDU will be released in cold as well as warm temperatures while ureaformaldehyde will only be released during warm weather, soil temperature above 55°.

Another important characteristic for the ureaformaldehyde's is that the effective use of these fertilizers is dependent upon the build-up of relatively large reserves of insoluble nitrogen in the soil. To get maximum use of these fertilizers may require several years of application.

Selecting the proper fertilizer for use will depend on several factors. Turfgrass quality desired, environmental conditions, cost, cultural practices, and growth rate desired will all influence the turf manager's choice. He must be aware of the different characteristics for fertilizer carriers in order to obtain maximum efficiency from his applications. In most cases, more than one type of nitrogen carrier is used. Maximum fertilizer efficiency will depend on using the proper fertilizer carrier, at the correct rate, and when needed by the plants. As one can visualize, this is not an easy task.

Listed below are three important factors for providing a sound, economical fertilizer program:

- (1) Provision of good chemical and soil conditions for proper nutrient uptake by plants.
- (2) Awareness of the different fertilizer carriers and how to use them properly.
- (3) Applying supplemental fertilizer at the correct ratio, rate and time. □

There was no sleeping on  
the job in the creation of  
a MAN MADE bluegrass!

**SOMEBODY STAYED UP  
NIGHTS TO PRODUCE**

**Adelphi**  
KENTUCKY BLUEGRASS

**RATED OUTSTANDING for overall  
performance in 10 years of  
testing at Rutgers University**

Adelphi Kentucky Bluegrass is, truly, the product of many sleepless nights. The nature of bluegrass is such that hybridization can be achieved ONLY AT NIGHT and, there's no telling what time of night will be the right time.

So, aside from expertise and dedication, many patient night hours went into mating the parents of Adelphi. The result...ADELPHI KENTUCKY BLUEGRASS (U.S. Plant Patent No. 3150)... was well worth it.

ADELPHI, the first marketed, "Man-Made" Kentucky bluegrass has proven itself... with outstanding overall performance ratings in tests against as many as 60 new varieties... in New Jersey, Ohio, Michigan, Tennessee, Colorado, Rhode Island, Illinois and Washington.

ADELPHI is becoming a favorite of professional turfmen and home gardeners as well. For good looking and natural, richer, darker green color throughout the growing season... excellent density... good disease resistance and tolerance to moderately close mowing, it's "Man-Made" ADELPHI... A FIRST IN TURF.

**ADELPHI has been chosen by the Plant Variety  
Protection Office, U.S.D.A., as A STANDARD  
FOR DARK GREEN COLOR to which all bluegrasses  
applying for plant protection will be compared  
for color classification.**

(Use of this statement does not indicate any  
approval or recommendation of Adelphi by the U.S.D.A.)

**Try it. This grass shouldn't  
give YOU sleepless nights!**

# Guaranteed Results Build Custom Applicator's Business

Referrals are the best salesman for Weeds, Inc., Yeadon, Pa. The company works on the principle that if you do a good job and stand behind it, soon you will have an outstanding reputation. The organization is one of the nation's largest commercial applicators with offices also in Baltimore, Richmond, Elizabeth, N.J., Pittsburgh, Toledo and St. Louis.

"We guarantee our work for the whole growing season and automatic follow-up checks are done to see how well the spraying treatment did," explains Earl Antes, co-owner with John Woronick.

The firm specializes in commercial industrial spraying such as railroad yards, railroad rights-of-way, oil tank farms, and inventory areas.

"We have found many firms try to do their own spraying with poorly trained personnel," states Antes. "Sometimes they don't even know what material they have been using. They will often show us a half-empty drum with a skull and crossbones painted on it but don't have the slightest idea what is inside."

Antes believes companies are just now becoming interested in having professionals handle their spraying needs on a year-to-year basis under contract. He says OSHA as well as environmental concerns seem to be encouraging this interest.

For the first year and a half of employment, Weeds, Inc., employees are considered to be under training. After that, they can accept ma-

job responsibility for their work and require less supervision. "We employ our people full-time, year-around," explains Antes. "Seasonal or part-time help means more risk because your personnel won't have the necessary training to do a trustworthy job. We want to provide the best possible service, fully guaranteeing our work, and it takes well-trained people to achieve this."

Though Weeds, Inc., has a sales staff, the basis for the rapid growth of the company is referrals. "We have plans to expand into the South and are already doing some work in Florida," says Antes.

"Companies find out about us from other companies, so the word is spread and our business just keeps growing." Some of the Weeds, Inc., employees are both salesmen and applicators. They sell during the winter months and operate the spraying units during the growing season.

Antes said the firm is getting very good results with a relatively new non-selective herbicide. "It is consistent and very reliable. We think it is the best thing for Johnsongrass and other deep-rooted perennials. Before using this new herbicide, the firm relied heavily on various systemic herbicide combinations to control perennial growth. Antes said the herbicide does an excellent job of eliminating problem perennial weeds either before or after soil sterilants are applied. He said by using the herbi-

cide on perennials, follow-up treatments have virtually been eliminated.

He said the initial per gallon cost is higher than other chemicals but that at the rate it is used it is more economical on a per acre basis. "Other chemicals were costing us \$125 to \$130 per acre to control Johnsongrass," says Antes, "But this herbicide's cost is only about \$55 to \$65 per acre."

Antes says his firm has never had any problems with application or safety. "It is a reliable and consistent product which we appreciate because of the guarantee we have on our service." Its low level of toxicity makes it much less hazardous to humans and animals than many other weed control materials.

Roundup, Monsanto Co., is cleared for non-agricultural or industrial uses for 2 years. It can be used on non-crop areas such as railroad, pipeline, highway, power and telephone rights-of-ways; petroleum tank farms and pumping sites; roadsides, storage areas, fence rows, manufacturing plant sites; parking areas; airports; and other similar uses. It will control many annual grasses and broadleaf weeds at the rate of one to 1 1/2 quarts in 20 to 30 gallons of water per acre as a broadcast spray. It will control many perennial grasses and broadleaf weeds at the rate of two to four quarts in 20 to 30 gallons of water per acre as a broadcast spray, the company told WEEDS TREES & TURF. □

# JOHN DEERE MAKES TRACTORS FOR JOBS OF ALL SIZES. BECAUSE YOU CAN MAKE MONEY ON JOBS OF ALL SIZES.

There's no such thing as a tractor that's right for any size job. If it's big enough for golf course maintenance, it's probably too big for most residential work.

That's why John Deere Tractors come in a wide range of sizes. So you can have John Deere performance and dependability going for you on any job.

Take the new John Deere 2040. It has a 40\*-hp diesel engine, 8-speed constant-mesh transmission, and plenty of hydraulic power to handle any attachment you might need. Including a 6-foot, center-mounted rotary mower. The 2040 was designed to do the big jobs faster and easier.

For work that doesn't require a tractor as big as the 2040, there's the hydrostatic-drive John Deere 400. It's powered by a twin-cylinder, 19.9-hp engine. And there's a 5-foot, center-mounted rotary mower that's designed to match the 400.

To do small jobs economically and efficiently, John Deere offers you the 200 Series lawn and garden tractors. You can choose from 8-, 10-, 12-, and 14-hp models, all with variable-speed drive to change ground speed without stopping or shifting gears. Rotary mowers are available in either 38- or 46-inch widths.

With any size John Deere Tractor, you also get the John Deere tradition of expert service, parts availability and flexible financing.

For any job that comes along —big, small or in-between—John Deere has a way to do it. Profitably.

\*Maximum PTO horsepower measured at 2,500 engine rpm (factory observed).

# Merchandising Is the Key For Fresno Custom Applicator

Tom Heffernan, owner of Custom Weed Control in Fresno, Calif., specializes in solving weed control problems for business and industrial concerns. He leases all spray applicator equipment, buys his own chemicals and even does his own bookkeeping. He believes in keeping a close watch over every aspect of his year-old firm, and utilizes some unique merchandising ideas to get and maintain business.

Heffernan started first by sending out a mailer to over 1,000 potential customers in a four-county area around Fresno. He got a very respectable 12 percent return, with over half of the leads becoming his first customers.

Since then, Custom Weed Control signs erected on completed projects have resulted in a call a week from each sign, but most important, his satisfied customers have been talking up the results they have seen with Heffernan's services.

A good example of how Heffernan works is the case of a new customer, Dunrite Manufacturing Company in Fresno. Dunrite, a light industrial manufacturing firm located in the sprawling urbanized area, had been trying to comply with city government requests to rid a patch of expansion-area acreage of unsightly weeds.

Russian thistle, lambsquarters, puncturevine and numerous other weeds and grasses had been infecting the troublesome area. So, when

Fells trees

controls provide  
easier operation.

Automatic oiler  
with manual  
override.

Anti-vibration  
system reduces  
operator fatigue.

Reversible cutting bar  
combined with  
sprocket-nose construction  
improves bar life and  
cutting efficiency.

Centrifugal clutch  
permits engine to idle  
without rotating chain.

Piston-ported engine  
improves starting,  
idling and acceleration  
and gives constant  
cutting power.

Front and rear handles  
placed for best balance,  
comfort and control.

## This lightweight can really cut it.

Here's a genuine lightweight chain saw that comes up with the muscle a professional needs. It'll slice through underbrush, knock down 32" trees and cut logs fast and easy. This lightweight Skil will handle just about any cutting job that comes your way.

When it comes to having all those features that get the job done fast, it's a heavyweight. Packed with extra value. Durable, too—it keeps working all day, every day. This is the power-packed lightweight that should be working for you and your crews!

**SKIL**<sup>®</sup>  
1616 Chain Saw. The powerful lightweight.

Signs erected on completed projects have resulted in a call a week from each sign.

Heffernan has his 3/4-ton pick-up rig equipped with a 320-gallon fiberglass tank, drift-control nozzles with remote controls, a brush nozzle attachment giving him a 35-foot swath with hydraulically controlled booms mounted on the front.

hydraulically controlled booms mounted on the front of the rig. He has found the unit gives him needed flexibility to go from small patch area jobs to ditch banks and large farm acreages.

In servicing his customers, Heffernan makes follow-up calls (he even uses dummy billings to let customers know he was there servicing the account) and takes photos of the work both to remind his customer what the results have been and to use with other prospective customers.

His efforts have paid off. Beginning the second year of operation many of his customers have also requested the same service.

Other Heffernan accounts, amounting to over 3,200 acres controlled in just his first 10 months of business, include many other small to large businesses and industries, subcontracting pre-paving weed control jobs for road builders, to maintaining year-round vegetation control for utility substations, tank farms and irrigation control districts. His reputation is so good that he now even gets leads from large pest control firms whose accounts are interested in chemical weed control.

Although he's limited his working area to a four-county area around Fresno — "that's almost more than I can handle," — he is now seriously thinking about franchising his business operation to handle the great number of potential customers for total vegetation control in northern California.

Heffernan brought with him to his new business 27 years of experience as a crop chemical weed control specialist, a retailer of farm chemical spray equipment, and head of the West's largest railroad applicator firm.

Tom Heffernan believes the secret to his successful business is based on:

- Ownership operation
- Solid knowledge of the technical and practicabilities of weed control
- A total feel for business management and customer relations
- Picking the right location
- And most importantly, staying localized enough to make the right decisions on time. □

Heffernan's mailer advertising his Custom Weed Control services came in the mail, Dunrite officials called him to take measures that would get their weed control problem "done right."

Like he does with all his customers, Tom first went out and surveyed the weed growth present on the lot. He then supplied a job proposal to the Dunrite firm indicating his suggested weed control program, projected results, and a cost quotation for year-round weed control.

On approval from the Dunrite officials of his proposal, Heffernan went to work. After preparing the ground, Tom selected Spike from Elanco Products Co., Indianapolis, Ind., which he applied with his 3/4-ton pick-up truck spray rig.

Heffernan has his rig equipped with a 320-gallon fiberglass tank, drift-control nozzles with remote controls, a brush nozzle attachment giving him a 35-foot swath with

# Best design for better penetration.

We make two heavy-duty aerators. The Ryan **Renovaire** has 12 tine wheels that operate in pairs. Unlike other models, they swing a full 18 inches to follow the contours of your land and ride over rocks instead of being damaged by them. Weight can be added to each pair for deeper penetration.

The Ryan **Tracaire** is an economical, rigid axle aerator. It's available with 9 or

**RYAN**  
TURF-CARE  
EQUIPMENT

12 tine wheels and has a 3-point hitch to force the tines into the turf.

Both models are fast and easy to use. Each can be used with interchangeable open spoon, closed coring, and slicing tines. And you can order a 12' by 10' dragmat as optional equipment.

The large area aerators from Ryan. We've designed them simply to work well. And built them to stay that way. For more information see your Ryan distributor or write: OMC-Lincoln,

a Division of Outboard Marine Corporation,

Primary supplier of secondary plant nutrients

# New Products

A tree replanter accessory for loaders and tractors has been introduced by Del Zotto Mfg. Inc. The "Hydra-Brute" features a curved-spade design that makes maximum use of available hydraulic power. Other features of the unit, according

to the manufacturer, include an ability to be attached or detached in minutes, quick-couple to available hydraulic-accessory circuits, operate at maximum without outriggers or other accessories, exert more than four tons of pressure to dig in the hardest earth, ball a tree for basket or burlap sacking and load or unload trees from truck-bed heights.

An edger attachment is new for the "Hustler" mower from Excel Industries, Inc. The edger is fast, clean, quiet, easy to use, maintain and store and can be mounted on the mower deck, according to the manufacturer. Because the edger does not hang over the trimming

side of the deck, it is safer than most power edgers, the company said. The broom/scraper attachment for the edger makes trimming tough grasses and weeds easy.

New tee markers on the market from Lesco Products are made of cyclolac plastic, the same material used for

football helmets. The markers are standard five-inch diameter and cemented with epoxy glue. They float and come in red, white and blue colors.

TRIM-IT, a new weed-cutting, grass-trimming machine, utilizes a flexible filament of nylon and stainless steel. It offers total safety — and

gets up close to all jobs. It cuts and trims under benches, bushes, in vines and ground cover, around grave markers, sand traps, chain link fences and any area where operator needs upclose trimming. It operates vibration-free.

A new technical booklet containing complete application and handling information on Sevin 4-Oil carbaryl insecticide is now available from the manufacturer, Union Carbide Corp. The bulletin describes the product's uses, chemical and physical properties, toxicology and special characteristics of importance to users. Sevin 4-Oil is a new oil-based dispersion of Sevin carbaryl insecticide which provides longer residual insect control and affords certain application advantages, according to Union Carbide.

Metal chemical containers for insecticides or herbicides should be

crushed, according to the National Agricultural Chemicals Association. Richway Products is now manufacturing a can crusher that crushes all kinds of metal containers. The unit operates hydraulically and flattens a five-gallon can down to about two inches in a single stroke.

A backhoe/loader, the 580C Construction King, is new from J I Case Co. The unit incorporates a

number of features to improve productivity and serviceability, according to the manufacturers. Two of the most significant are a shock-absorbing unitized main frame and a componentized power train, which permit servicing of individual components without disturbing the rest of the drive line.

# How to make your board see the value of new turf equipment.

Convincing your Board of Directors that new turf equipment is a necessary and sound investment can be one of your most difficult tasks. They don't always see the benefits behind such a purchase.

And as good businessmen, they won't commit the money until they're sold on the expenditure. So when it comes time to face them, here are some of the things you should point out.

## Point #1: The Duffer Demands More.

Today's golfer is more sophisticated than ever before. He has seen, and many times played, some of the finest courses in the world. He recognizes the value of a good course. And if yours is sub-par, he'll go elsewhere.

With this more sophisticated golfer comes the need for more sophisticated golf course maintenance. Heavy player traffic has increased the work required to keep the turf in top condition. So jobs that were once optional are now

mandatory. Where spiking a green used to be sufficient, today it also needs deep aeration.

All this dictates the use of specialized equipment that wasn't available ten or even five years ago. Equipment that will enable you to build and maintain a top flight course, and help avoid special turf problems that could prove extremely costly.

## Point #2: Machines Do More.

In the past decade, the price of labor has tripled. The same number of men must do more work in less time to give you the same value for each labor dollar invested. Mechanized equipment allows you to trim hundreds of unnecessary man-hours. One man can now cut more sod in an hour than six men used to cut in six hours. Or that same man can aerate 18 greens in a few hours instead of a few days.

New engineering concepts coupled with precision machinery means he'll do a consistently good job. You get better results and fewer occasions when a job must be redone.

And your turf equipment is depreciable; something your labor is not. You get an accounting break over a period of years. At the end, it's like owning a piece of free machinery. One that will continue to save you money long after you've paid for it.

Which brings us to the third point.

## Point #3: Longevity Makes Them Worth More.

Equipment life should be a prime consideration when you select a manufacturer. The longer a machine works, the more it does,

and the less maintenance it requires, the better your investment. And here's where we'd like to put in a little plug for Cushman and Ryan turf equipment.

Both lines of machinery are built to last . . . and last. It's not unusual to see a piece of Cushman or Ryan equipment still doing it's daily chores after ten or fifteen years of use. We believe the idea of "planned obsolescence" should be obsolete.

But performance is just as important as longevity. A Cushman Turf-Truckster and its accessories give you the capabilities to transport, spray, spike, dump, aerate, and top dress . . . all from *one* power source.

Ryan offers a machine for almost every turf task. Equipment that does a better job, in less time, and with a minimum of maintenance. For over 30 years, all Ryan equipment has been built with three goals in mind: quality, performance, and innovation.

If "A Day With the Board" is in your future, we'd like the opportunity to tell you more about the full line of Cushman and Ryan Turf equipment. Write to us and we'll send you our catalogs, full of detailed product information. Information that may help you open a few eyes to the value of new turf equipment.

Owners of the John Deere 8430 and 8460 4WD tractors can now mount and use the Waldon 10 1/2-inch dozer

blade with the new mounting kit available from Waldon, Inc. The unit features solid mounting to the tractor frame, direct hydraulic cylinder hook-up, reversible and replaceable cutting edge and dual cylinder operation.

Circle 711 on free information card

A serrated 16-inch disc harrow is now available for Economy Trac-

tors, according to the manufacturer, Engineering Products Co. The harrow and other rear-mounted tools are attached in minutes by means of a standard three-point hitch. It is not necessary to remove front-mounted tools when using rear-mounted tools.

Circle 712 on free information card

Rear-mount grass mower featuring a gear-box drive has been introduced

by Sun-Mastr Corp. The unit was specifically designed for use with smaller tractors in the 16 to 30 PTO horsepower range. The unit also features drop-design blades.

Circle 713 on free information card

# Servis machines are built with one simple idea in mind.

If you're familiar with the name, Servis, you know that we've been manufacturing rotary mowers, cutters and shredders, box scrapers, landscape rakes and rear-mounted blades for a long time. Since 1946 to be exact.

Interestingly enough, some of the first equipment we put in the field is still being used today. That's dependability.

And that kind of dependability is no accident. Servis equipment is designed to do specific jobs. And to do them better than anything else. It's also designed to last.

Take construction. Servis frameworks are unibody constructed to provide extra frame strength. And the high-stress areas are reinforced with heavy gauge tubing.

## To be the best.

In addition, all of our rotary cutters feature safety devices to protect the tractor and cutter drive trains.

The gears and gear box shafts used on our machines are precision machined to increase strength and durability, and reduce noise.

And Servis is one of the few lines of equipment that offers you an option of blade carriers on rotary cutters. The Cyclone (dish-pan type) for cutting up to 3" brush. And the Gyro ("A" frame type) for cutting heavy 4" brush.

Of course, this is only part of our story. The point is that Servis builds a complete line of equipment with one simple idea in mind. To be the best.

So whether you've got 4" brush to cut, stalks to shred, ditches to dig, soil to move or land to level, see your Servis dealer. He's got the equipment you need.

For more information about the Servis line, contact your nearest authorized Servis dealer, or write: Austin Products, Inc., **SERVIS** Dept. 2-75 S, P.O. Box 1590, Dallas, Texas 75221.

**We build equipment the way we do because you wouldn't settle for less.**

AUSTIN PRODUCTS, INC. An Austin Industries Company

A chain saw scabbard that will accommodate gasoline and hydraulic power saws with blades up to 36 inches

ches has been introduced by Hastings Fiber Glass Products. Made of the non-conductive reinforced fiber glass, the scabbard mounts readily on trucks and buckets for quick and easy access to the saw. The scabbard has an overall length of 36 inches with the top opening measuring 3 inches by 5 3/4 inches.

Circle 714 on free information card

A new elm that is as beautiful as the American elm but immune to Dutch elm disease is being offered to nurserymen, land developers and landscapers by Sheerlund Forests. The Sheerlund elm — botanically known as *Zelkova serrata* — is a majestic, useful tree for homes, parks, golf clubs, cemeteries and other locations. It offers a wine glass shape and grows up to three feet a year.

## You can't beat a boom for precision.

When you're spraying 3 gal/1000 sq ft of a touchy chemical mix, you need all the control of volume, direction and coverage you can get. And you can see the precision you get with our 1010 utility vehicle sprayer above. It treats a green with care. 19 nozzles on 10" spacings give 15 ft of even coverage and controlled pressure drives the chemical into the problem zone. With stainless steel tank and mechanical agitation. Plus optional hose and gun for spot spraying and tree work. For tees, greens, fairways and around the clubhouse, for fungus, weeds and insects, we have a full range of boom sprayers. And labor-saving air sprayers for turf and tree care. But most important, we have the machines that provide the spray power to meet every professional turf need. Call your local FMC Dealer or call Jack Custer at (501) 935-1970, FMC Corporation, Agricultural Machinery Division, 5601 E. Highland Drive, Jonesboro, Ark. 72401.

**FMC** Environmental  
Equipment

A sod harvester manufactured by Princeton Mfg. Co. is the subject of a new bulletin published by that company. The company's "Tow-Boy" is designed to harvest 16-inch wide sod where vegetative regrowth is required or where weight due to thickness of cut or sand conditions requires small pieces of handling, for the Model 4816. Model 4020 cuts 20-inch wide slabs 40 inches long.

Circle 721 on free information card

Lor-Al Corp. offers the concept of self-nursing in fertilizer application with development of the model 3200 SN Easy-Rider. The heavy-duty diesel applicator mounts a two-compartment, 16-ton dry body or a two-compartment, 3,000-gallon liquid body on a tandem chassis. Features of the self-nursing concept are high load capacity with compartmented bodies and high speeds over the road and in the field.

Circle 722 on free information card

Modular shelves for mobile storeroom vans have been introduced by Knaack Mfg. Co. The shelves are constructed from 18 ga. steel, welded throughout with one-piece

steel back riveted in place for maximum rigidity and convenience. Bin dividers are optional and all shelves install singly or stack.

# THE GREEN MACHINE

This is the machine that revolutionized the turf industry . . . the machine that seeds or sprigs, fertilizes, waters, sprays, and mulches in one easy operation . . . the BOWIE HYDRO-MULCHER.

Its performance and reliability are unequalled. Its capabilities have created a whole new industry of lawn and turf, ground cover and erosion specialists. The BOWIE HYDRO-MULCHER is the daddy of them all . . . the green machine!

## EXCLUSIVE BOWIE HYDRO-MULCHER FEATURES:

- Only proven unit for both sprigging and seeding with cellulose fiber mulches.
- Can mulch, fertilize and seed or sprig half an acre in eight minutes.

- Has enclosed shredder bar for shredding full bales of cellulose fibers.
- Has centralized tower control with no hoses.
- Has triple agitators for faster mixing and eliminating sediment build-up.
- Uses pump only for spraying, so pump lasts longer.
- Has spray mist and other accessory nozzles for such uses as insect control, tree spraying and fire fighting.
- Six models — from 350 to 3,000 gallon capacity.

# Don't kill it. Control it.

MAINTAIN® CF 125 is the growth retardant that thinks like a gardener. It works with nature, not against it.

MAINTAIN effectively slows the growth rate of grass, shrubs and trees. That means less mowing, trimming, edging and pruning. And that means you'll be cutting down on maintenance costs.

Just about everything MAINTAIN touches grows slower. (How much slower depends on the kind of weather and greenery you've got.)

Your maintenance people won't have to go out on a limb, either. MAINTAIN can be sprayed where machinery can't go. Up steep slopes, around guard rails, along fences.

Besides keeping a green thing from

**U.S. BORAX**  
A MEMBER OF THE RTZ GROUP

getting out of hand, MAINTAIN practically puts a stop to pesky broadleaf weeds.

In your business, nature running wild can increase the chance of fire or damage. So you can spend a lot of money on maintenance, use a soil sterilant to eliminate vegetation, or use a growth retardant to control nature and keep things green.

Naturally, it makes more sense to use MAINTAIN.

Contact your U.S. Borax distributor or your nearest U.S. Borax office.

### Arizona Turf Conference Headed by Lofts' Ledeboer

Dr. Fred B. Ledeboer, director of research, Lofts Pedigreed Seed Co., Bound Brook, N.J., will headline the Arizona Turfgrass Conference scheduled for May 5 and 6 at the Doubletree Inn, Tucson, Dr. William R. Kneebone, University of Arizona turf scientist and program chairman, has announced. Ledeboer will discuss cool season grasses.

Other speakers include Clyde Elmore, extension weed scientist, University of California, Davis, who will discuss weed control for ornamentals; and Jack D. Butler, extension turf specialist, Colorado State University, Fort Collins, Colo., who will serve as conference keynoter.

Also, Thomas J. Meeks, regional director for the U.S. Golf Association, Far Hills, N.J., will describe "Getting a Golf Course Ready for a Tournament." Kneebone says the banquet speaker is Andy A. Bertoni, of the W. A. Cleary Corp., who lives in Northville, Mich.

### Landscape Association Names Five Design Award Winners

Residential design awards were presented to landscape architects and installing firms for outstanding work by the National Landscape Association at the recent Landscape/Garden Center Management Clinic in Louisville, Ky.

Awards in the complete residence category were given to Green Bros. Landscape Co., Inc., Smyrna, Ga.; and to Chazz Cox Associates and Gateway Gardens, Inc. in Winter Park, Fla. In the multi-family residence category the top award was presented to Wayne Mucci Associates, Lake Forest, Ill.; other awards were given to Foley-Koch Landscaping, Inc., Mt. Prospect, Ill. and Moore's Landscape and Nursery, Glenview, Ill. In the active use area category an award was presented to Concepts, Inc., Ridge, N.Y. In the entrance category, Chazz Cox Associates and Gateway Gardens, Inc. took honors.

### Activated Charcoal Use for Turf Studied

Two University of Delaware researchers have found that activated charcoal can be used to correct weed control chemical mistakes in application and other problems.

Dr. William Mitchell, professor of plant science, and Barry Hesseltine, researcher assistant, have found that activated charcoal or the "black eraser" can often "tie up" spray residues and let a turf manager safely proceed with a new seeding or sodding. Some of the most popular herbicides used for pre-emergence crabgrass control will also prevent the establishment of new turf for a period of two to three months after application.

Mitchell and Hesseltine say that if, after treatment with a crabgrass killer in April, it is decided that the turf needs reseeding, mistakes can be erased by spraying about seven pounds of activated charcoal on each 1000 square feet. A new seeding can be made the same day without damage from the crabgrass killer residue.

The researchers also found that herbicide residues can slow up the growth rate of newly installed sod and in some cases actually prevent the sod from bonding with the underlying soil.

Activated charcoal was effective in eliminating this potential cause of sodding failure. The research conducted by Mitchell and Hesseltine was reported at the recent Northeastern Weed Science Society meetings in Boston. Tests involved several herbicides and lawn grasses. The tests showed tall fescue to be more tolerant of some herbicide residues than either perennial ryegrass or Kentucky bluegrass.

Mitchell stressed that since a large percentage of the cultivated sod used for home lawns contains cultivars of Kentucky bluegrass, it is important that the presence of herbicide residues be considered. He said it has been shown that where a residue problem exists, it can be minimized or eliminated by use of activated charcoal.

### Dr. Watson Receives Award From USGA Green Section

The Green Section of the United States Golf Association has given its top award for distinguished service to Dr. James R. Watson, vice president of customer relations and chief agronomist for Toro Co., Minneapolis.

Dr. Watson, honored for his contributions to turf research, is the 16th recipient of the award which is made annually. He has conducted research on adaptability of species and strains of turfgrasses, fertilization practices, snow mold prevention and techniques for the winter protection of turfgrasses. His turfgrass adaptation studies led to the development of new cultivars in Bermudagrass and creeping bentgrass for sports turf.

He is a contributor to several standard texts on turfgrass science and has also written many articles on turfgrass care and management.

### Housing Developments Hold Course Market Key

While the golf course market will always constitute an important business for Toro Company, Minneapolis, its prospects for reestablishing its high past growth rate will depend in part on an easing of interest rates and the trend toward golf

## All-Pro Tingelhoff Applauds Natural Turf

The conversion back to natural turf at Miami's Orange Bowl represents a "substantial victory" for the National Football League Players Association, according to all-pro center Mick Tingelhoff of the Minnesota Vikings.

He said the association opposes artificial turf because its hard-asphalt base and slippery surface produce more knee injuries than natural grass fields. He predicted NFL owners will never again replace natural grass with artificial turf.

"I hope the switch back to natural grass in Miami heralds a new trend," the Viking star said at a luncheon sponsored by Cushman-Ryan turf care equipment during the 47th Golf Course Superintendents Association of America conference in Minneapolis. The 35-year-old Viking player, whose team plays its home games on natural turf, said artificial playing surfaces also can shorten a player's career. He said the hard surfaces subject legs to a "merciless pounding" and result in bruises and similar nuisance injuries.

"Asphalt really wears you out and it can wreck your legs," Tingelhoff told more than 120 turf equipment dealers. "There is no way you can recover from your injuries within a week. I don't know of a

player, trainer or team physician that likes artificial turf."

The former University of Nebraska All-American said artificial turf surfaces "are faster" than natural grass. But he said even small running backs, who rely on speed, dislike artificial turf fields. "What good is speed if you ruin your knees falling on a hard surface?" he asked. "The greater the speed, the more force there is upon impact. It is a matter of basic physics and every running back knows it."

However, Tingelhoff admitted, it is impossible to prove artificial turf has ended or shortened anyone's NFL career. "The association would definitely put artificial turf to an end if we could," he said. "But I don't know how we could prove it." He said Robert Kennedy Memorial Stadium in Washington, D.C. has the best playing surface in professional football. The field has Nugget bluegrass on a 20-inch base largely formed of sand and peat. Irrigation drainage and heating are controlled by small underground lines plus a water pump inside the stadium.

"The surface is very porous and soft," he said. "It is actually softer than natural turf surfaces, so therefore, fewer knee injuries result. And the field actually drains faster than artificial surfaces."

courses in new housing developments.

In the company's annual report recently released, it was noted that increased marketing emphasis is being given by the company to other high-growth areas; the commercial markets for the Turf Products Division and the commercial and agricultural markets for the Irrigation Group.

The report said the golf course market accounted for 13 percent of Toro's sales in 1975, for irrigation products and turf maintenance equipment. With a decline in the construction of new courses from about 450 to 150 last year, Toro feels the existing golf course market represents the principal short-term opportunity for Toro's irrigation and mowing equipment.

### Nelson Is New President Of Landscape Contractors

Duane Nelson, a landscape contractor in Spokane, Wash., has been installed as president of the Associated Landscape Contractors of America at its recent annual meeting in Phoenix, Ariz.

Also installed were Dick Brickman, Theodore Brickman Co., Long Grove, Ill., president-elect; Ronald A. Ahlman, Lawrence & Ahlman, Dundee, Ill., vice president; William C. Byers III, Landscape Industries, Inc., Smyrna, Ga., vice president; William Thornton Jr., Thornton Industrial Landscape Contractors, Cincinnati, Ohio, treasurer; and Vernon D. Smith, Millcreek Gardens, Inc., Salt Lake City, Utah, secretary.

## Nine Outstanding Dealers Honored by Cushman-Ryan

Nine firms have been named outstanding dealers by Cushman-Ryan turf care equipment, Lincoln, Neb.

Officials from the dealerships were presented plaques by Frank McDonald, Cushman-Ryan sales manager, at a luncheon during the 47th annual Golf Course Superintendents Association of America in Minneapolis. The annual award is based on marketing, sales and service achievements.

Dealers honored were Gulf Shore Turf Supply, Inc., Pensacola, Fla.; Fallis Turf Equipment, Ltd., Richmond, British Columbia; Morin Equipment, Ltd., Ste Foy, Quebec; Duke Lawn Equipment, Ltd., Burlington, Ont.; Westward Power Equipment, Edmonton, Alberta. Cushman Motor Company, Inc., Minneapolis; Toro Pacific Distributing, Gardena, Calif.; Krigger & Company, Inc., Pittsburgh; and Tennessee Electric Motor Company, Nashville.

Dr. Fred V. Grau, president of the Musser International Turfgrass Foundation, presented a check to Dr. Harry Niemczyk of the Ohio Agricultural Research Center, at the recent GCSAA turf show in Minneapolis. The money will be used to help support a graduate student at Ohio State University. Ben Warren of Warren's Turf Nursery is treasurer of the foundation.

# BUILT LIKE A ROCK

...Only Stronger!

"Bunton lawn-turf equipment is built to take a beating... it's tough! It's built to cut grass, even in the hard to get to places. Even a shove off the back of a truck can't damage the heavy-duty 12 gauge steel frame and cutter housing." So listen to Rocky Graziano... send for more information today... with Bunton, you can't lose! Available from 8-inch to 52-inch cut.

Diamond Shamrock

## DACONIL 2787® pours it to nine fungus diseases

 Broad spectrum Daconil 2787 fungicide controls nearly all of the fungus diseases found on golf greens, tees and fairways, as well as many ornamentals.

And now it is available in convenient flowable or wettable powder form.

Excellent turf tolerance permits use right on through the hot, summer months. Used successfully on over 25 species of grass... established turf or new seedings. Daconil 2787 is highly effective against *Helminthosporium* in the spring and fall.

For professional turf care over your entire golf course, follow the Diamond Shamrock Pro-4 system: Daconil 2787 fungicide, DACTHAL® preemergence herbicide, DACAMINE® and DACONATE 6® post-emergence herbicides. You'll see beautiful results.

Contact your turf chemicals supplier, or write the Diamond Shamrock sales office nearest you.

## Process Turns Cattle Manure To Odorless Soil Conditioner

A new process to improve the biological conversion of cattle manure into soil conditioner has been developed by the BioCon Division of Searle Agriculture Inc., Hereford, Texas. The product from the process is being introduced to the lawn and garden industry under the brand name "Tilleez". The soil conditioner is sold in bulk to golf courses and other quantity buyers.

Company officials told WEEDS TREES & TURF the conditioner improves the tilth and fertility of soil without creating the problems of odor, burning and weeds usually associated with manure. The conditioner is produced by a new plant in the Texas Panhandle which biologically converts manure from cattle feedlots into humus for garden and lawn use.

The process, developed after years of experimentation, eliminates offensive odor, even when the

conditioner is wet. The process also dissipates the heat generated by decomposition and substantially reduces weed seeds and other harmful organisms, company officials said. Basically, manure from feedlots is pulverized and deposited in vats at the plant. In the vats, air is forced through the manure to stimulate digestion by aerobic bacteria.

Decomposition of the manure by aerobic bacteria is what makes the conditioner virtually odorless, dry or wet, according to Dr. William C. Hackett, division general manager. Aerobic bacteria — microorganisms that thrive in air — can digest manure without producing the odor that occurs when anaerobic bacteria — bacteria that live without air — perform the decomposition, Dr. Hackett said.

In less than a week, the composting — which would have taken nature a year to perform unaided — is completed in the vats, and the conditioner is ready for bagging. Elimination of offensive odor is only

R. Wayne Mezitt, vice president and general manager of Weston Nurseries, Inc., Hopkinton, Mass., will head the convention committee for the American Association of Nurserymen's 101st Annual Convention and Trade Show July 10-14 in Boston.

one of the advantages which the process imparts to the conditioner, company officials said. Heat generated during decomposition, which causes manure to burn vegetation, is dissipated from the conditioner in the vats. Exposure to that heat substantially reduces weed seeds and other harmful organisms in the manure before they can reach the soil.

## Wholesale Nursery Growers Choose Taylor as President

The Wholesale Nursery Growers of America recently held an election at its winter membership meeting in Arlington Heights, Ill.

Re-elected to serve for one-year terms were: Robert Taylor, Concord Nurseries, North Collins, N.Y., president; Hubert Nicholson, Commercial Nursery Co., Decherd, Tenn., vice president; Ben Davis II, Ozark Nurseries Co., Tahlequah, Okla., secretary-treasurer; and Bill Scarff, Scarff's Nursery, New Carlisle, Ohio, director-at-large.

Re-elected for two-year terms were Martin Usrey, Monrovia Nursery Co., Azusa, Calif.; Hans Hess, Hess' Nurseries, Cedarville, N. J.; Austin Kenyon, Greenleaf Nursery Co., Park Hill, Okla.; and Edward Porter, Triangle Nursery, McMinnville, Tenn.

# Put it on!

With USS Vertagreen Tournament Plus you're within easy reach of having the best fairways you've ever seen. This premium fertilizer is formulated especially for fairway turf and is granulated and sized for uniform application with rotary and drop spreaders. Forty-eight percent of the nitrogen content is derived

from synthetic nitrogen sources—mostly urea-formaldehyde.

With an analysis of 19-5-9 it is formulated with sulfate of potash and contains guaranteed amounts of calcium, magnesium, sulfur, zinc, manganese, boron, copper, and chelated iron. Everything your fairways need

to stay strong and healthy.

USS Vertagreen Tournament Plus is just one of many products your USS Vertagreen distributor has for fairway turf. He's also got the right product for your greens. See him today—he'll show you how to put it on.

See your Vertagreen distributor.

## Salt May Seriously Damage Landscape Plants and Trees

When roads are icy, salt trucks can look very beautiful. But what deicing salt does to landscape plants is often not so pretty. Symptoms of salt injury to evergreens include drying and browning of needles. Die-back and witch's broom-like growth occurs on deciduous species like red oak, beech and crabapples.

"Some ornamental plants are more tolerant than others to flying salt spray or salt on the soil," Harold Davidson, extension horticulturalist at Michigan State University, told WEEDS TREES & TURF. "When you are choosing plants for locations near salted streets or highways, it is a good idea to choose those that are known to be salt tolerant."

Honey locust, Norway maple, blue spruce and Austrian pine are some of the best trees for areas where salt spray is a threat. Japanese maple, box elder, white spruce, red pine, white pine, Scotch pine and English yew are very susceptible to damage by salt spray. Oaks are also likely to be injured, David-

son said. Most shrubs are susceptible to salt injury, including most of the barberries, dogwoods, euonymus, honeysuckle, firethorn, elder, viburnum and coralberry. Most grasses, vines and ground covers, on the other hand, are at least moderately tolerant.

## California Insect Expert Explains Elm Disease Control

A University of California-Riverside professor of entomology and expert on tree insects says if your elm tree has been attacked by the elm bark beetle, you still can fight the insect if there is no disease.

First, water adequately. Trees suffering from drought are much more susceptible to beetle attack. Next there is chemical control: a methoxychlor spray. This is much less toxic than DDT to man and wildlife, he told WEEDS TREES & TURF.

"Look for general tree symptoms first," he said. "If the tree looks weak; if its leaves are not so green as they should be; if you find

grass that looks like paprika in the cracks, crotches and around the base of the tree — you probably have the bark beetle. Then examine the bark; the brownish beetle makes holes one-eighth inch in diameter, or less; beetle larvae and pupae inside the bark are about the size and appearance of rice grains.

He said the beetle is most likely to strike by early April, with the peak in late April. A large second brood might appear in mid-June and peak in late July. A smaller, third brood will peak in early September. Sprays should be applied in early April and mid-June.

If the elm bark beetle has already attacked in great numbers and infected the tree with Dutch elm disease, however, there is nothing to do but cut the tree down, bury or burn its parts and spray surrounding elms. "The problem is," he said, "people do not want to cut down trees because it is expensive. If they do cut the tree down, they do not want to burn the wood until winter. This is exactly the wrong thing to do, because this firewood lets the beetle emerge from the wood and carry the disease to other trees."

# THE UNDERCOVER WEED KILLER.

Weeds and roots under asphalt paving can cause tremendous damage. But you won't know they're doing it until it's already done. That's why you need CASORON, the Undercover Weed Killer.

CASORON is approved for use under asphalt, whether it's a recreational court, a golf path, or a parking lot. Applied over the subgrade, CASORON soon begins to emit a weed-killing vapor. This gas is trapped under the asphalt, forming a long-lasting protective blanket against weed breakthrough. Straying roots from ornamental plants bordering asphalt surfaces can't damage the surface because CASORON is a "root-inhibitor." The tips of the ornamental roots stop growing when they come in contact with the CASORON-treated soil, and no harm is done to the ornamental.

CASORON is also perfect for weed control around all kinds of ornamentals and trees. Use it in parks, beside buildings, along highways, in cemeteries, or almost anywhere to eliminate the need for costly, time-consuming close trimming and mixing. It effectively kills more than 65 perennial and annual weeds without harming ornamentals or sterilizing an area for future planting.

## SOLO ENDS YOUR SPRAYER HEADACHES

Tired of sprayers that corrode, drip...  
Seals that dissolve... Valves that shrink  
or swell?

The SOLO all-plastic sprayers stand up to all  
agrichemicals in water or oil solution. Including  
your most exotic weed and brush killers.  
No rubber or metal comes into contact with  
the formula.

Made for commercial use, by the world's  
oldest and largest manufacturer of portable  
high-concentrate mist blowers, SOLO's  
manually-operated sprayers are still attractively  
priced for the semi-pro and casual markets.

HANJET  
455

The HAN-JET-455 is an  
all-purpose sprayer for  
gardening, weedkilling,  
sanitation and many other  
outdoor and indoor applica-  
tions. It weighs a mere 3  
lbs and sprays its entire  
1.3-US-gal. contents after  
just one pumping.

The famous JET-PAK-425  
is surely your best buy for  
all casual-to-professional  
spraying jobs at any de-  
sired pressure from 0 to  
90 psi. Ten pump strokes  
deliver one quart of liquid.  
Ideal for no-drift herbi-  
cide spraying at low pres-  
sure. Used extensively in  
the tropics for more than  
ten years — a product of  
mature design and ex-  
treme reliability.

SOLO supplies a wide line of sprayers,  
blowers, chain saws, tillers and other  
types of outdoor power equipment. We  
invite dealer and distributor inquiries on  
all of these products.

## Toro Holds Parts Seminars In Management for 23

Twenty-three persons were awarded  
certificates by the Toro Co., Minne-  
apolis, Minn. at the completion of a  
training seminar in parts manage-  
ment and inventory control.

The sole woman attending was  
Gloria Reynolds, of Adams Equip-  
ment, Inc., Baltimore. Zaun Equip-  
ment, Inc., of Florida, sent three  
men, one from each of its branches:  
Carl Jeise, of Jacksonville; Dick  
MacDonald, of St. Petersburg; and  
Kevin Quinn, of Orlando. Minne-  
sota Toro, Inc., had two repre-  
sentatives: Alex Donaldson, of  
Edina; and Rick Gwynn, of Crystal.  
Two Canadians in attendance were  
Alex Cormack, of Turf Care Prod-  
ucts, Lt., Markham, Ontario; and  
Alain Forest, of Agri-Tech, Inc.,  
Boucherville, Quebec.

## New York State Arborists Elect Wickey as President

Richard Wickey, park supervisor  
for Garden City, N.Y. was elected  
president of the New York State Ar-  
borists Association at its recent an-  
nual meeting.

Three vice presidents were also  
elected: 1st vice president Jake  
Bruinooge, Bruinooge Tree Service,

of Spring Valley, N.Y.; 2nd vice  
president Samuel Blakley of S. G.  
Blakley Tree Co., Mt. Vernon,  
N.Y.; 3rd vice president Leo G.  
Cook, Goodell Tree Service, of  
Vestal, N.Y.; James W. Taylor,  
James W. Taylor Tree Surgery of  
Walden, New York was reelected  
secretary-treasurer.

On the board of directors, past  
president Carl Lundborg of Bartlett  
Tree Experts, Westbury, N.Y. will  
serve a one-year term, as will Philip  
Brogan of Lewis Tree Service,  
Syracuse, N.Y. For two-year terms,  
Raymond Smith, Davey Tree Ex-  
pert Co., of Buffalo, N.Y. and Jon  
Hickey, Parr & Hanson of Hicks-  
ville, N.Y. For three-year terms,  
Jack Flanagan, Tree Preservation  
Co. of White Plains and Robert  
Mullane, Landscape Foresters, Ltd.  
of White Plains, N.Y.

Margaret Herbst, with head-  
quarters at 101 Park Avenue, New  
York, N.Y. 10017 was reappointed  
executive secretary.

Wickey has worked for the past  
17 years as park supervisor in  
Garden City. Before this position,  
he served in the Nassau County  
Park Department for eight years. He  
has been active with the Asso-  
ciation since 1958.

He is a graduate of the Long Island  
Agricultural and Technical Institute  
at Farmingdale.

# Can Natural Turf Compete With Artificial Turf?

It can if it's certified  
Manhattan Perennial Ryegrass

Charles A. Sprague High School in Salem, Oregon was completed in 1972, including this fine athletic facility. Their choice of football turfgrass was Manhattan "Turf type" Perennial Ryegrass. Manhattan quickly established a lush green turf, evident in the above photograph.

With proper maintenance, Manhattan has held up well through three of Oregon's rainy fall seasons and has retained its rich appearance and all-weather playability. For more information on Manhattan and the Sprague High School football field story, write to us at the address below.

## Manhattan is a Natural.

Developed by Rutgers University, New Brunswick, New Jersey, grown in Oregon under rigid certification and quality control. MANHATTAN TURF TYPE PERENNIAL RYEGRASS is a superior turf grass with many advantages for nearly every application.

## Sprinkler Irrigation Group Publishes License Guideline

The Sprinkler Irrigation Association has announced the publication of its *Landscape Irrigation State Licensing Guideline*. Developed by the SIA's landscape irrigation committee, the guideline is a study of the need for state licensing programs, the formulation methods of actual legislation, an evaluation of existing legislation and its specific application to the industry, consideration of the licensing of landscape irrigation consultants and an outline of methods of obtaining industry support and informing the public and legislatures of needs for the legislation.

The Guideline is available from the SIA office at 13975 Connecticut Avenue, Silver Spring, Maryland 20906 at a cost of \$4.00 per copy. The 72-page booklet contains the following sections:

Introduction, terminology, statement of need, protection of potable water supply, protection from the public from injury or damage, protection of consumer interests, protection from financial liability, conservation of power and water, guidelines for the development of a state licensing law with model

legislation and notes and commentary and a summary.

The basic portion of the guideline, the model licensing law, is presented in a format that is both useful and easy to understand. The actual suggested wording of legislation is contained on the left hand pages with explanatory notes and comments as to its implications and necessity, along with room for personal notes, on the right hand page.

As a guideline, all possible material pertaining to a state licensing program has been included. All points presented are actually a part of licensing laws in effect in at least one state at the time of preparation. Even though selective deletions may be required in a given state to meet specific local requirements, an effective licensing law may be formulated from the guideline if sufficient material is judiciously incorporated to serve the needs of any given state.

Extensive review of the material was made to insure that it included the most up-to-date information available from states having existing licensing laws, answered problem areas as they might have developed in these states and also met basic legal requirements as well as appropriate governmental regulations.

The guideline, which has been three years in the development, was reviewed by Leo B. Hoschler, registrar of contractors for California; John Kayetan, state registrar of contractors for Arizona; John Heidman, member of the Texas State Board of Landscape Architects; F. J. MacDonald, executive vice president of the American Institute of Landscape Architects; and Malcolm D. MacArthur of the firm of Lee, Toomey and Kent, legal counsel to the SIA.

Earle H. O'Dell (left) of Chesapeake, Va., and Houston B. Couch of Blacksburg, Va., were honored at the 16th annual Virginia Turfgrass Conference held recently in Fredericksburg. O'Dell, secretary-treasurer since 1969 of the Virginia Turfgrass Council, received the R. D. Calk award honoring the council's first secretary-treasurer and Couch received the Tolly H. Quinn service to industry award. O'Dell, praised for his role as secretary-treasurer, is assistant manager of the turf and garden division of Todd Co., Chesapeake. Couch, a professor of plant pathology at Virginia Tech in Blacksburg, was cited for his work with turf diseases.

Meet the "Untearable" Mr. Tu-Tuf

the big name in PURR-WICK barrier liners is . . .

# tu-tuf<sup>®</sup>

CROSS-LAMINATED POLY SHEETING

it ensures the **QUALITY** of the system!

Spreading Sand over Tu-Tuf barrier on model green, 6 compartments, showing drainage pipes in each compartment.

## Why is TU-TUF Cross-Laminated Recommended over Regular Poly?

Because PERFORMANCE is what counts, and Golf Superintendents have much more at stake than the small cost difference between low density poly film and TU-TUF Cross Laminated barrier sheeting.

- Standard Poly cracks in folds and creases . . . *TU-TUF does not.*
- Standard Poly shows early disintegration under weather conditions . . . *TU-TUF is long lasting, weather stabilized.*
- Standard Poly can never be pin-hole free . . . *TU-TUF Cross-Laminated is pin-hole free.*
- Regular Standard Poly has only a fair water-vapor transmission rate . . . *TU-TUF is up to 10 times better.*
- Regular Standard Poly has virtually no snag or puncture resistance . . . *TU-TUF has outstanding resistance to both.*
- Regular Standard Poly is limited in widths and length . . . *TU-TUF is made to prescribed size, thus eliminating waste and cutting down labor costs.*

Without question, the Barrier sheeting to be used is the very heart of a successful PURR-WICK installation. Don't take chances with an inferior poly film...get the recommended barrier material...**TU-TUF** Cross Laminated.

### From "UNPLAYABLE" TO PLAYABLE LIES

Looking down the perennially water soaked unplayable fairway at Battle Creek Country Club, work has begun to eliminate a condition that has plagued members for years. The 300,000 sq. ft. area employed TU-TUF Cross-Laminated barrier material.

TU-TUF being unrolled down the fairway from a golf cart. Lengths and widths are available to order.

Tu-TUF also ideal for Weed Control, Ice Skating Rinks, Equipment Covers, Temporary Enclosures.

## Volume on Street Trees Published by Penn State

Street trees, used properly in an urban environment, provide lasting benefits to man. But, a tree planting plan in which details are ignored — either in the development or actual establishment — usually ends in disaster.

The Pennsylvania State University's College of Agriculture has published a book, *Street Trees*, designed to assist those who take part in planning and carrying out tree beautification programs in urban areas.

"This book has been prepared for use by shade tree commissions and professional horticultural firms who plan and carry out tree planting and maintenance," said Dr. Roland R. Daniels, Penn State assistant professor of environmental horticulture and author of the publication.

Topics include site selection, variety selection, site preparation, planting, and care and maintenance following planting. Included in an appendix are a checklist of current street plantings and analysis of potential planting sites; proposed specifications for selecting, planting, and maintenance of street trees within developments; general speci-

Newly elected officers of the Midwest Regional Turf Foundation are from left, Danny Quast, Milwaukee Country Club, president; Dr. W. H. Daniel, Purdue turf specialist, re-elected as executive secretary; and Kermit D. Delk, Springfield Country Club, Ohio, vice president. Over 700 attended the Foundation's conference last month at Purdue.

fications for deciduous shade and flowering trees; standards of workmanship for tree care and maintenance; and suggested contract specifications for establishment and maintenance of street plantings.

Two other features are a tree hardiness zone map of Pennsylvania and an outline of characteristics of all trees suitable for planting in the state. The book may be purchased for \$2.00 plus six percent Pennsylvania sales tax. Make check or money order payable to The Pennsylvania State University and send with your name and address to STREET TREES, Box 6000, University Park, Pa. 16802.

## Frank's Nursery Sales Inc. Expects To Boost Sales 15%

Frank's Nursery Sales Inc. said it expects 1976 sales to be about \$60 million, up 15 percent from \$52.3 million last year.

The increased revenue will come from 62 stores it will have operating at year-end, compared with 54 units a year earlier, the company said. During the year, Frank's said, it plans to open 11 stores, including two garden centers it is acquiring from Anderson's in Columbus, Ohio.

## Improved Quarter Margins Reported by Toro Company

Toro Company, Minneapolis, has reported sales of \$35.8 million and earnings of \$751,000 for the second fiscal quarter ended Jan. 31. Sales for the similar period of the preceding year were \$37.4 million and earnings \$849,000.

Sales for the first six months ended Jan. 31 were \$56.8 million, a decrease of 13.4 percent from the \$64.4 million registered for the same period of the preceding fiscal year. Net earnings for the first half were \$98,000, compared with \$941,000 in the first half of fiscal 1975.

## Sales Up 50% Last Year, Echo Chain Saw Reports

The Echo Chain Saw Division, Kioritz Corp. of America, Northbrook, Ill., has announced sales for the 1975 fiscal year were up over 50 percent in a recent statement by Donald A. Bartelt, director of marketing.

"While the chain saw industry, in general, was off approximately six percent during the past 12 months, our sales were up dramatically for the third consecutive year since the Kioritz Corporation of America was established," he said.

# Mixed or Straight, just add water.

That's it! Par Ex fertilizer mixes with IBDU® release nitrogen nice and slow and easy. They give your grass a full, but gradual, feeding of nitrogen up to 12 weeks—minimum. IBDU—exclusive with Par Ex turf fertilizers—is a primary source of water insoluble nitrogen (W.I.N.). Activated by soil moisture, not temperature, IBDU's release rate is constant, slow, just right for grass.

Straight 31-0-0 Par Ex IBDU gives you a really slow release of N, plus benefits you don't get from ordinary slow release nitrogens; namely, total availability in a single growing season, earlier green-up in spring and longer lasting green in fall.

Par Ex fertilizer mixes with IBDU are uniformly made to give you the correct balance of water soluble nitrogen, water insoluble nitrogen, phosphorus and potassium for your specific turfgrass needs.

So order Par Ex Professional Products. The only brand that offers IBDU . . . mixed or straight.

## Crownvetch—Seed or Plants?

Until 1946, no seed or crownvetch was commercially available. Plantings had to be done slowly and laboriously and expensively with crowns, according to well-known agronomist Dr. Fred V. Grau.

When Grasslyn, Inc. brought forth hulled, scarified seed of crownvetch in 1946, it amounted to a revolution in establishing erosion-control groundcover on slopes. For the first time, this ground-hugging legume could be established by the low-cost method of seeding, Dr. Grau told WEEDS TREES & TURF.

Until the advent of Penngift crownvetch seed, Pennsylvania had specified rooted plants of honeysuckle. Now virtually all of the crownvetch established on the slopes of the thousands of miles of highways is done by hydroseeding. This is a process that was pioneered in 1939 by Dr. Grau and the late C. N. (Doc) Keyser on the first section of the Pennsylvania Turnpike. It

consists of a water slurry of seed, limestone, fertilizer and other ingredients. The slurry is sprayed on a rough slope and mulched with straw, wood cellulose fiber or various kinds of nets. Planting of plants or crowns continued for a time because old habits are hard to break. Soon the economics of seeding on raw subsoil slopes dictated the demise of the slow, expensive plant-planting method, Dr. Grau said. Ironically, Grasslyn was the only firm producing both crowns and seed, but consistently their management recommended seed, even though the sale of plants would have been more to their advantage financially. "But don't you get coverage faster from plants?" some ask. The answer is no, Dr. Grau said. A crown or potted plant may take four to eight weeks to get rooted down and to start spreading. The bare soil between the plants meanwhile is subject to erosion. A recent hydroseeding job in New York State was done in late June. Specifications were prepared by Dr.

Grau. Two months later, when he saw the slope, there was 100 percent cover of crownvetch and companion grass. The legume was six to eight inches tall and appeared to be six to eight months old.

He said specifications writers would do well to seek the source of accurate information before putting a spec out to bid. The first consideration is "no topsoil." Next come adequate lime and the correct analysis of fertilizer. Third, and of extreme importance, is excess inoculant. Fourth is adequate mulch and the right kind for the circumstances.

## New Rain Bird Distributor In West Is Polson Company

Rain Bird Sprinkler Manufacturing Corp., Glendora, Calif. has appointed Polson Company as its new franchised turf distributor for the state of Washington and parts of Idaho and Montana.

Polson manager John Bangert said his company's new irrigation facility in Seattle, Wash. is now opened and handles all of the contractor's needs.

# The Davis Difference.

The Fleetline 14+4 fits convenience and performance into snug digging sites and tight budgets.

Take the struggle out of installing sprinkler systems, CATV cable and other small but strenuous trenching jobs.

Small trenching jobs can be backbreaking. So look to the budget-minded trencher with big-machine features — the Fleetline 14+4.

Four-wheel Hydra-Static drive and coupled Dana axles provide tractive power that assures straight trenches. And from the comfort of your seat, you can dig from 4" wide, 40" deep to 12" wide, 26" deep (102 mm wide, 1016 mm deep to 304.8 mm wide,

660 mm deep) at infinitely variable speeds to match soil conditions.

And don't worry about tight, cramped areas or rough, uneven ground.

Hydraulic articulation with four-way pivot teams with one-hand Mono-Stick control of speed, steering, instant forward/reverse and braking to provide easy, sure maneuverability.

These and other performance features plus a choice of options make the Fleetline 14+4 the

economical trencher that's rich in performance. See the difference total design makes at your Davis dealer.

Or, call Davis toll-free, 800/835-3016.

## Headquarters Sales Group Created by Scott's ProTurf

Jack Cantu, O. M. Scott & Sons vice president and general manager of the Pro-Turf Division, Marysville, Ohio, recently announced the formation of a special department to provide products and services from Scott headquarters directly to company lawn, school and cemetery turf managers, as well as to commercial lawn applicators and landscapers.

John Dunham and Jim George will jointly head the department. Dunham has a strong technical turf background with experience in the lawn applicator industry, while George is a former ProTurf sod market technical representative.

Cantu made it clear that the headquarters sales group will limit its activities to direct sales to specified portions of the professional turf market. Golf course superintendents, sod growers and commercial nurserymen will continue to be served through ProTurf's coast-to-coast network of 67 tech reps.

## Johns-Manville Plans Center In New Jersey for Service

Johns-Manville's Ag-Turf Division has announced plans to establish a service facility in northern New Jersey to serve the eastern irrigation market, according to William J. Christman, division general manager.

The new center, which the company expects to have in operation during the first half of this year, will serve as a physical distribution point for the company's complete line of sprinkler products. Johns-Manville, whose sprinkler manufacturing facilities are located in

Turf research at Penn State has been supported by \$9,000 from members of the Penn State Turfgrass Alumni Club over the past four years. Club president Gerald Brennemen of the Longvue Country Club, Pittsburgh, second from left, presented a check for research to the faculty at Penn State during the annual turfgrass conference held recently at University Park, Pa. Faculty shown are Dr. J. M. Duich, left, Dr. D. V. Waddington, receiving grant, and Dr. T. L. Watschke, right.

Fresno, Calif., is opening the center in view of the importance of the eastern market.

"The new service center, in conjunction with our new California brass foundry, should enable us to give better service to the irrigation market on the East Coast than any of our competitors," Christman said. "We recognize the importance of this market, and that is why we are gearing up to do something about it," he said.

A new Johns-Manville red brass foundry, located in Fresno, went on-stream last month. Utilizing electric furnaces, the automated facility will be devoted to the production of sprinklers and accessories. Anticipated production runs will average

500 molds an hour. The foundry cost almost \$10 million.

## Diamond Shamrock Exec Says Growth To Continue

Diamond Shamrock Corporation Chairman, C. A. Cash told the Cleveland Society of Security Analysts recently he expects 1976 results to exceed 1975, when the company recorded net income of \$114 million on sales of \$1.1 billion. However, he noted that, "While we cannot expect to maintain the kind of percentage growth rates we have achieved in the last two years, we do expect to achieve a continuous record of earnings growth."

Reviewing the diversified chemicals and oil and gas company's performance, he noted that since 1970: return on sales doubled to 10% in 1975; return on equity increased to 26% last year; and return on capital employed rose to 15%.

In the new Biosciences and Metals Unit, Cash said the company will have doubled its production capacity for its proprietary fungicides in time for 1978. He attributed the rapid growth of the agricultural chemicals business to research successes such as Daconil and Bravo fungicides and Dacthal herbicide.

## Davey Lawnscape Division Expands Service in Ohio

Davey Lawnscape Service, the lawn care division of Davey Tree Expert Co., Kent, Ohio, has opened two new offices and warehouse facilities to provide expanded service in northeastern Ohio.

Davey's new lawn care service was introduced last year to homeowners and commercial establishments in Portage and Summit counties. In view of the public's initial response and acceptance of the program and demand from adjacent counties, Davey Lawnscape Division is expanding to provide service in Cuyahoga and Stark counties this year.

The service — a professionally applied, full season lawn fertilization, insect and weed control program — was specially designed to fit the grasses and seasonal growth patterns in northeastern Ohio, according to J. Martin Erbaugh, lawnscape general manager.

"Davey Lawnscape Service is four separate, balanced formula, liquid chemical applications which provide the right nutrients, herbicides and insect control ingredients at properly timed intervals to feed lawns and control common weeds and insects," Mr. Erbaugh told WEEDS TREES & TURF.

"The service is provided at a price competitive with what the homeowner or businessman would spend for materials on a do-it-yourself basis, and we will care for all, or just a portion, of the property," added Mr. Erbaugh. "With our service, time is saved, proper application at the right time is assured, and most important, it is done by trained professionals."

Each technician, a graduate of the Davey Institute of Lawn Sciences, operates a spray vehicle equipped with a specially designed applicator. The applicator is designed to assure uniform coverage while minimizing overspray, "drift" and unsightly streaking.

## Superintendents, Sod Farms Aid California Turf Study

The golf Course Superintendents Association of Southern California and Pacific Sod Farms have made donations to the turfgrass research fund of the Southern California Turfgrass Council. The superintendents donated \$700 and Pacific \$500.

## Program Outlines Completed For California Turf Institute

Program outlines for the 1976 Southern California Turf & Landscape Institute, to be held April 28 and 29 at the Royal Inn, Anaheim, have been completed, reports John Van Dam, co-chairman of the educational event which attracted nearly 700 registrants last year.

Sharing sponsorship of the Institute are the University of California Cooperative Extension and the Southern California Turfgrass Council. Co-chairman with Van Dam is Alan Dennis, Council president. Van Dam is a UCCE turfgrass specialist.

According to program coordinator Victor A. Gibeault, extension horticulturist, joint sessions will be held Wednesday morning and Thursday afternoon. Among the topics slated for review are how grasses grow, drought tolerant varieties, pest activity, sodding practices and climaxed with a closing panel discussion Thursday afternoon that will consider problems and solutions associated with intensely used turfgrass areas.

With split sessions scheduled Wednesday afternoon and Thursday morning, registrants will choose between subjects related to plant management or personnel management. One plant session will be devoted to living with kikuyu grass. Employee development, visual aids in training and updating of CETA, OSHA and pesticide regulations are to be feature topics in the personnel management segment.

Among the noted speakers for the 1976 Institute are Drs. James Beard, Texas A & M University; Jack Butler, Colorado State University; and A. L. Turgeon, University of Illinois.

**“... Gravely, long famous for what is probably the world's most rugged small gear-type tractor drive.”** Popular Science Magazine  
May '75

When a leading magazine will make a flat-out statement like that, there has to be a lot behind it. And there is, the unique Gravely transmission.

It's a transmission engineered to combine a high level of performance with great durability. It's eight speeds of positive power with instant reversing action. It's all gear, all steel drive, all reliability...right down to Gravely-built attachments for mowing, snow removal, and gardening.

No other riding tractor gives you that...plus the toughest frame and pivoted front axle in its class; rear-mounted engine for extra traction; rack and pinion steering; choice of 10, 12, 16 or 16.5 HP; and options like hydraulic attachment lift, front and rear PTOs, and more.

Look in the Yellow Pages for your nearest dealer or write for our free catalog. Gravely Division of Clarke-Gravely Corporation, 3504 Gravely Lane, Clemmons, North Carolina 27012.

**GRAVELLY. LIKE NOBODY ELSE.**

## Toro Names Michigan Man Regional Contractor of Year

Bern Flier, president of Flier's Underground Sprinkling, Grand Rapids, Mich., has been named Upper Midwest "Contractor of the Year" by Toro Co., Minneapolis.

## Control of Mole Crickets In Bahiagrass Explained

Mole crickets can create real problems for bahiagrass, according to the Florida Nurserymen and Growers Association. These insects become very active in late March and early April. The female emerges from the ground, she begins to fly hunting for the male and then they mate.

Control of mole crickets is difficult while the breeding season is in progress. As soon as this is over the female may then bury into the soil to deposit eggs. If a soil insecticide is applied, residual in the soil, there is a chance much of the population

will be eliminated. Bahiagrass should be watched for signs of mole cricket runs, the soil will be soft and spongy. In bare areas the runs may be seen.

## Two New Turf Distributors Are Appointed by Rain Bird

Rain Bird Sprinkler Mfg. Co., Glendora, Calif. has appointed two new franchised turf distributors.

Western Industrial Supply, Amarillo, Texas, will serve the Panhandle Texas market area. Ernest Oakley, president of Western, said it will stock the full line of Rain Bird turf irrigation equipment as well as other related equipment. It will also have capabilities in assisting with design, specification and installation of irrigation systems for residences, commercial sites and golf courses.

Irrigation Sprinkler & Turf Co., Division of Perry Supply, Albuquerque, N.M., will serve New Mexico. Paul Clendenin, president of

Irrigation, said it will carry the complete Rain Bird turf line and other related products. The company said it has broad experience in the turf care field.

## International Harvester Co. Profit Slump in 1st Quarter

International Harvester Co., Chicago, said its earnings fell 54 percent in its first fiscal quarter. The company reported profit of \$29.9 million, down from a record \$65.2 million in the year-earlier period. Sales in the period ending Jan. 31 fell slightly to \$1.08 billion from \$1.09 billion the year before.

The company said, however, that its first quarter net rose sharply from the "depressed" levels of fiscal 1975, when Harvester earned \$720,000 and \$1.5 million, respectively, from continuing operations. Harvester also said its first quarter profit was the second best ever for the period.

### 4 RAIN JETS Do a Better Job than 24 Ordinary Sprinklers ...First System Engineered Free

See your problems disappear with the Rain Jet method of water distribution which provides drops, not mist. A realistic gallonage rate, water economy, good penetration, and effective use of fertilizer are achieved by Rain Jet's patented, rotary pop-up, pendulum action.

Because fewer Rain Jets are needed, you install them easily and profitably with far less digging and piping.

Choice of Brass or Adjustable Heads in various patterns — true squares, rectangles, full, 1/2, 1/4 circles. Unusual Shrub Heads fully adjustable from closed to 12-ft. radius.

Over a million satisfied customers worldwide. Write for Free Literature, or Phone Collect (213) 849-2251 — Carl Frasier.

"Showers of Diamonds"®

### FOUNTAINS BY RAIN JET®

ADD BEAUTY PLUS PROTECTIVE LIGHTING. Patented RAIN JET nozzles form dancing patterns of Jewel-like water droplets. Delightful lighted and unlighted! Efficient low-energy design. Complete Fountain and Bowl Assemblies — no plumbing needed. Fountain Heads from \$17.75 for use with existing pools.

See our Fountain Shows at Sea World, Disneyland, Magic Mountain, Marineland, etc... or visit our Factory Showroom. Custom inquiries invited. Send for Full Color Literature, or Phone Collect (213) 849-2251 — Bob Trost.

## Rotary massage®

Shower Bath Head

## USED EQUIPMENT

**FOR SALE: 2 used aerial baskets** — 50 ft. working height, 2 Asplundh brush chippers. Bean sprayer, 35 G.P.M. Vermeer stump cutter 1560. Parkway Tree Service, Milwaukee, Wisconsin. Phone 414 257-1555.

**ASPLUNDH 1971 model L-31** bucket truck mounted on 1971 Chev. carrier powered by 6 cylinder gas engine, equipped with utility body, excellent running operating condition, \$7,500.00. Vilsmeier Equipment Inc., Rt. 309, Montgomeryville, Pa. 18936. Phone 215 699-3533.

**FOR SALE: 52 ft. Skyworker**, 85 ft. Arlo crane, Vermeer tree spaces, late model Hydro-Ax's, other used equipment. Please contact Jeff Gould, P.C. Gould Sales Co., Box 178, Essex, Connecticut 06426. 203 767-1636.

**1969 VERMEER TSS44 tree spade** mounted on 1968 Dodge flat bed 300 truck, excellent condition. Used on private estate and professionally maintained. Asking \$7,000. Rasco, Box 193, Lakeville, Conn. 06039. Phone 203 435-2565.

**FOR SALE: 11 gang Jacobsen Blitzer** gang mowers, steel wheels; sharpened and overhauled, \$2000.00, will deliver. Schneider Turf Farm, R9, Quincy, Illinois 62301. Phone 217 224-1893.

**BEAN 300 series mist blower**. Needs fan but otherwise in excellent condition, \$2,500.00. McGinty Bros., Inc., Long Grove, Illinois. 312 438-5161.

**1975 MODEL 500 HYDRO axe**, brand new, less than 150 hours, has all extra features including air conditioning, over \$44,500.00. Call 914 895-3495.

**PRINCETON HARVESTER**, excellent condition. \$10,000., Maryland Turfgrass Industries, Inc., Box 119, Newark, Delaware 19711. Phone 301 398-6262.

**VERMEER TS-66T on Ford tandem truck** with 6000 miles. Hardly used, mint condition. Call 517 655-1244.

**301 T — ROTOMIST TREE SPRAYER**, excellent, 300 hours, guaranteed. Box 150, c/o Weeds, Trees & Turf, Box 6951, Cleveland, Ohio 44101.

## SEEDS

**SOD QUALITY Seeds** Merion, Fylking, Delta, Park, Newport, Nugget, Adelphi, Cheri, Glade and Baron bluegrasses also fine fescues. Manhattan rye grass. Custom mixing available. Michigan State Seed Co., Grand Ledge, Michigan 48837. Phone 517 627-2164.

## HELP WANTED

**REPS WANTED To call on Golf Course Superintendents**, on State Municipal and

Institutional Park and Landscape Superintendents, as well as distributors selling above trade. We make Tu-Tuf Cross-laminated poly, and leading ground barrier sheeting in the developing Purr-Wick System. Predictions are for growing demand next 10 years. Only reps with good following above fields will be considered. Strictly commission basis. Reply stating experience, number of salesmen, your organization, main lines handled, territory you now cover. Address Chairman, Sto-Cote Products, Inc., Drawer 310, Richmond, Illinois 60071.

**MARRIED NURSERYMAN to manage nursery-growing trees** for one of Colorado's largest nurseries. Residence furnished, salary open, send resume or call 303 936-3493. SaBell's Inc., 5555 W. Ohio, Denver, Colorado 80226. References please.

**HARVEST FOREMAN AND CREW**. Experience on Brouwers Harvester necessary. Year round job in sunny Arizona. Pay on piece rate system. Apply Maricopa Turf, Box 1062, Cass Grande, Arizona 85222.

**ARBORIST WANTED for a challenging position** in one of Colorado's largest nurseries — salary open — send resume or call 303 936-3493. SaBell's Inc., 5555 W. Ohio, Denver, Colorado 80226.

## DEALERS WANTED

**DEALERS WANTED: For a new revised patented method** of installing drain tile without digging. Get rid of isolated wet spots for as low as 25¢ to 50¢ a foot installed. Instant Drainage\* pipe only 12¢ to 25¢ a foot. Ideal for golf courses, planter boxes, football fields — systems presently installed. Call or write for information. Irrigation Supply, 31635 Aurora Road, Solon, Ohio 44139, ask for Dave 216 248-0095.

## POSITION WANTED

**GOLF COURSE BUILDER desires core to lbuild or consider Superintendent position**. 13 years experience, includes construction 54 holes Class "A" superintendent with GCSAA. Can professionally operate heavy equipment necessary for building golf courses. Box 148, Weeds, Trees and Turf, Box 6951, Cleveland, Ohio 44101.

**EMPLOYMENT WANTED 30** — 2-year college horticulture graduate available for management trainee position in turf, nursery, greenhouse, landscaping and garden center sales. Contact: Roscoe Gibson, State Fair Community College, Sedalia, Missouri 65301. Phone: 816 826-7100.

**HORTICULTURIST: Ambitious, energetic, imaginative, reliable, proven managerial skills, diversified experience; available for a challenging position of presonsibility**. Reply Box 149, Weeds, Trees and Turf, Box 6951, Cleveland, Ohio 44101.

## EQUIPMENT FOR SALE

**AUCTION SALE — Henkels and McCoy**, Saturday, April 10th 9:30 AM Strinestown, Pa. 7 miles north of York. Everything sells to highest bidder. Bucket trucks, hydraulic digger derrick, chipper, stumpers, bulldozers, backhoes, loaders, scrapers, pickups, stakes, dumps, etc. Terms: Complete payment sale day in cash or guaranteed funds only. Write for descriptive brochure. Vilsmeier

Auction Co., Rt. 309, Montgomeryville, Pa. 18936. Phone 215 699-5833.

**1973 MITTS & MERRILL Brush Chipper** Model M-7, mint condition, extra set of blades. Used on private estate and professionally maintained. Asking \$3800. Rasco, Box 193, Lakeville, Conn. 06039. Phone 203 435-2565.

## Trimnings

Since 1937, the town of Ridge-wood, N.J. has been applying an old-time remedy for ridding sewer lines of tree roots. The town distributes quarter-inch crystals of copper sulphate which they turn over to house owners in quart-size cardboard containers holding slightly less than two pounds of material.

Instructions call for crystals to be poured into porcelain toilet bowls which are connected by a lead bend to the soil pipe (never into sink which has a thin-walled trap). Flushing and agitating with a plunger makes sure all crystals are carried down the drain and assures no damage or stain to the porcelain.

Twice-a-year treatments give excellent control of roots in tile sewer connections and there is no evident injury to trees or plants whose roots are killed. Back in 1961, the township discontinued the program for one year and found the cost of maintaining sewer lines rose 40 percent. They continued the program, it was reported in a recent newsletter of the American Horticultural Society and excerpted in the *Journal of Arboriculture*.

**The Irrigation Division** of Toro Company has published a 175-page design manual entitled *Residential and Commercial Turf Irrigation Systems Information*.

Intended for use by architects, landscape architects, contractors and other specialists involved in the designed installation of automatic underground sprinkling systems, the manual is a companion publication to *Design Information for Large Turf Irrigation Systems* published in 1972.

The book is available from Toro Irrigation distributors or directly from Order Desk, Irrigation Division, The Toro Company, P.O. Box 489, Riverside, Calif., 92502 for \$6.75, postage prepaid.

**Union Carbide Corp.** has published a free 30-page bulletin describing nematode damage and how to control it with chemicals.

The bulletin is entitled *Nematodes and Their Control* and can be obtained by writing the company at P.O. Box 1906, Salinas, Calif., 93901.

**Increasing pressures** to conserve energy will lead to widespread use of sewage water for irrigation and fertilization, according to James W. Adams, vice president and general manager of the Irrigation Group of Toro Company, Bloomington, Minn.

He said golf courses will be among the first to make extensive use of recycled sewage water but the practice will spread to all types of turf and vegetation management, including agriculture.

"The advantages of on-land disposal of sewage water have been well known for years," he told **WEEDS, TREES & TURF**. "But interest in on-land disposal systems is now accelerating because of the combined effects of water shortages and the energy crisis." The latter, he said, has increased costs for pumping water and for fertilizers derived from oil and natural gas.

With state and federal laws now requiring sewage water disposed into lakes or streams be virtually pure, alternative systems for disposal are becoming more attractive, he said. "And when you consider that the principal pollutants in sewage water are nitrogen and phosphorus — which all plants must have in order to grow — it doesn't make sense to be wasting both water and nutrients, as well as the energy to dispose of them, when it isn't necessary," he said.

**To people**, the brilliantly colored dying leaves in autumn are a source of beauty, but to the tree they mean survival, says Dr. Patricia W. Spencer, University of Illinois horticulturist. Shortly after a leaf begins to lose its chlorophyll (in autumn) it also begins to lose the ability to retain water and remain turgid, she reported in a recent newsletter of the American Horticultural Society.

The membranes surrounding each cell become leaky and no longer act as semi-permeable barriers to solutes in the cell sap. Cellular fluids ooze out of the cells and

flood the intercellular spaces, rendering the leaf translucent, like cooked celery or spinach. This state of affairs does not last long, for the water soon evaporates, leaving the leaf drooping, dry and shriveled. The now-desiccated brown leaf falls from the tree and becomes matted into the ground below.

As autumn rains and winter snows percolate through the matted, fallen leaves, they remove traces of minerals, especially calcium, and return them to the soil, where soil bacteria and fungi feed upon them. The leafy skeletons of cellulose that remain on the surface act as a mulch, holding in soil water and modulating soil temperatures.

By the times the visible signs of this aging appear, the leaf has already undergone a series of events that will lead to its eventual death and the tree's survival. Before it finally falls from the tree, dry and brown, the leaf will have returned more than half of its nitrogen, phosphorus and potassium to the permanent tissues of the tree, plus some magnesium, sulfur and manganese. Calcium, which is not easily removed, is the only mineral element remaining to any degree.

Even evergreens, which remain green and retain their chlorophyll-filled foliage throughout the winter, eventually shed their old leafy growth and undergo a similar reclamation of mineral elements. This reclamation of mineral elements from dying tree leaves, along with concurrent removal of carbohydrates, is not merely an illustration of natural conservation; it is a process absolutely essential to future growth, she said. The report was excerpted in the *Journal of Arboriculture*.

**The American Society of Landscape Architects Foundation** recently published Award Winning Landscape Architecture.

Winning entries in the ASLA Professional Awards Program, for the years 1970 through 1974 have been depicted in photos; drawings have been reproduced; and the comments of the award juries are presented. For information write: ASLA Foundation, 1750 Old Meadow Rd., McLean, VA 22101.

# Here's the new riding mower that thinks it's a walking mower.

Like all of us Jacobsen Distributors, you'll find Earl Cain (of Lawn & Garden Supply Co., Phoenix, Arizona) eager to tell you about Jacobsen's new 70" Triplex mower.

We're all pretty excited about this brand new mower that mows and trims areas like they were done by hand.

Because of its maneuverability

and design, you can move it in close to shrubs and trees for those touchy trimming jobs. Just like a walking model.

The mowers are fully articulated to follow the contours of uneven ground. And the constant-speed reels give any turf a finish a barber could be proud of.

There's a technically advanced hydrostatic drive, with

both forward and reverse, that produces over 7 MPH in transport speed, and up to 4 MPH in mowing speed.

Ask your nearby Jacobsen Distributor about the new 70" Triplex mower. When it comes to mowing and trimming turf areas, it sure beats walking.

## Your Jacobsen Distributors.

Great products deserve great service.

For the name of the distributor near you write: Jacobsen Turf Distributor Directory, 1721 Packard Avenue, Racine, Wisconsin 53403

# Don't pick baron\* KENTUCKY BLUEGRASS

## just because of its rich green color or quick germination...

Pick baron because it meets all your needs.

When comparing bluegrass varieties, a good rule of thumb is... **pick the most versatile bluegrass you can buy.** Naturally you want a grass that has a deep rich color, a grass that has high disease resistance and one that blends well. You expect that. But you may need more from your bluegrass.

**1.** If your need is for a bluegrass that can stand low temperatures... Baron endured -40°C temperatures in University of Minnesota cold hardiness studies. It is recommended for every cold climate state in the U.S. Or, if your need is for a bluegrass that tolerates extremely warm weather... in University of Maryland and Virginia Polytechnic Institute and State University studies, Baron ranked among the top for endurance to hot and humid summer stress conditions.

**2.** If *Poa annua* is a problem, you'll certainly want to look at Baron... University of Illinois studies ranked Baron in one of the top three bluegrass categories for competition against *Poa annua* and other unwanted grasses.

**3.** Wear tolerance studies conducted by Dr. James Beard, formerly of Michigan State University, ranked Baron third among 18 leading bluegrass cultivars tested.

**4.** If you are a sod farmer, you need a quick stand and good sod strength... Michigan State University studies placed Baron in the best group for rapid sod development and superior sod strength.

**5.** If you need to cut Baron Kentucky Bluegrass as low as 3/4" all summer long, go ahead! Baron's low growing blades bend down to a low angle escaping the mower blade... leaving more foliage for a healthier green plant.

**6.** A bluegrass requiring less fertilizer is always welcome. Baron consistently outperforms other bluegrasses in low fertility trials as documented by Michigan State University. Just three pounds of nitrogen per 1000 square feet applied annually in a balanced fertilizer. Substantially better than Merion and other high fertility requiring varieties.

**7.** When you need your supply of Baron, you'll find it's practically just around the corner. Baron is stocked by leading seed houses and distributors located throughout the U.S. and Canada.

**8.** And the price is right. Compare prices of other top bluegrass varieties and you'll be pleased with Baron's price. Pick a bluegrass that meets **all your needs.** You'll pick versatile, durable, and reliable Baron Kentucky Bluegrass. Baron is only available as certified seed.
