MSU gets $30,000 grant for tree program

The Michigan Department of Natural Resources (DNR) has given Michigan State University researchers a $30,000 grant for tree and forestland improvement throughout the state. The annual renewable grant will aid MSU and the Michigan State Cooperative Tree Improvement Program (MICHCOTIP) in increasing forest productivity.

Dr. James Hanover, MSU forestry specialist and program coordinator, and researchers are trying to accomplish this through cultural and genetic improvements. Part of the effort involves developing superior hybrids which mature more quickly than ordinary trees. To date, MSU has developed special varieties of fast growing spruce, poplar, aspen and birch. Seeds from their varieties are being used to start plantations throughout Michigan.

The researchers are also testing cultural practices of fertilization, herbicide trials, spacing techniques and nursery production of hybrid varieties. These studies are conducted on cooperators' lands throughout Michigan to determine optimum growing conditions for certain species. MICHCOTIP was formed in 1974 as a cooperative effort to work on the problems of Michigan forestlands and urban trees. Members include MSU, DNR, universities and private companies from around the state. Members pay a yearly fee to participate in, and receive research benefits done through the program.

Part of the total research program is MSU’s work on accelerated-optimal-growth (Accel-O-Gro) for rapid tree production. In Accel-O-Gro, trees are grown under greenhouse conditions, and through use of light and temperature controls growth is continuous and not affected by seasonal fluctuation. Trees can then be grown to the desired size much faster than regular nursery practices. Researchers can also determine more quickly the superiority of weaknesses of species grown under these conditions.

These techniques will be applied to all aspects of Michigan forestry — including street tree improvement and commercial and state forestland operation.

For more information about MICHCOTIP from Hanover write: Department of Forestry, Michigan State University, East Lansing, MI 48824.

PRODUCTIVE

Proven by owners for line clearing efficiency, and preferred by operators for precise tower control and bucket positioning. HI-RANGERS are No. 1 in utility and contractor preference for insulated aerial man-lifts. Patented HI-RANGER "3D" one-hand control, hydraulic tool line options, chip boxes, and other features may benefit your operations. Write for "4F-5F CATALOG".

SINCE 1950
HI-RANGER
Aerial Towers meet the American National Standard for Vehicle-Mounted Elevating and Rotating Work Platforms ANSI A80.2-1983, as required by the Williams-Steiger Occupational Safety and Health Act of 1970; Part 1910.41, Occupational Safety and Health Standards, Section 1910.413; Part 1926. Safety and Health Regulations for Construction, Sections 1926.556, 1926.650 (b), and 1926.955 (e), as applicable.

GOODALL

The Goodall Fillies

Introducing the 36 inch cut Goodall Rear Discharge mower. A new design deck allows close trimming on both sides, helps prevent windrows and gives you a clean manicured cut (not that just-cut look). The new variable speed drive gives a wider range of ground speeds. The 3 gallon fuel tank and Hi-Way front caster wheels are standard equipment. This new mower is designed for fine lawns and rough areas. The finger tip control gives the same easy handling and hillside stability and maneuverability as the other Goodall Self-Propelled models. Also available is a new 52 inch rear discharge mower.
