Grasscatcher sweeps all debris up and away
The Grasshopper Company has a new grasscatching system for its zero-turn-radius mowers. The Quik-D-Tatch has been designed to deliver powerful vacuuming action, even in adverse conditions. Wet grass, pine straw and dethatching debris are all easy prey of the Quik-D-Tatch.

The unit operates directly from the mower deck drive, and can be removed or installed without tools in seconds, by simply pulling one pin. An optional air/full signal indicator automatically sounds an intermittent signal when the hopper is full or when airflow through the rear screen is restricted.

Grasshopper grasscatchers are available in two styles, the 8 cubic foot Model 7 slide-in bag catcher and the 13 cubic foot Model 15 lever-activated metal hopper.

The 8 cubic foot bag catcher is available as either a single or twin bag, and one person can easily dump clippings directly into a pickup bed or container.

Plastic filters designed to minimize pressure loss

The filters are designed to minimize pressure loss, with internal flow direction along the longitudinal axis of the cylinder. This direct flow principle causes the filtered particles to collect at the end of the cylinder where they can easily be flushed out through a 3/4-flushing ball valve. The filters are designed to work with water pressure to 100 PSI.

The filter achieves a high degree of filtration through the use of a polyester weave screen in a molded cylinder. O-rings insure perfect sealing, and the filter can be dismantled with a hand turn of the cylinder housing. Pepco has a complete line of water conservation products.
