Soil technology fills porosity gaps

Isolite is described as a breakthrough in soil modification technology which offers a permanent solution to soil management headaches, says its manufacturer, New Golf Concepts, Inc. of Westminster, Colo. Isolite is a porous ceramic granule of uniform size with about 70 percent pore space throughout each granule. With no "dead-end" pore space, stored moisture is directly available to the plant, the company says. Isolite also does not break down in soil.

According to New Golf Concepts, lack of porosity is a main culprit in problem soils used as a growing medium. An "ideal" soil, says the firm, contains equal mixtures of solids and pore space. In clay soils, solid particles create a large surface area to which a thin layer of water adheres tightly. Plants often cannot extract water from the soil solution because attraction is so great and the water is unavailable. Result: poor plant growth. Also, clay-rich soil is more susceptible to compaction in high traffic which decreases macro-porosity.

By contrast, sandy soils abound in macro pores, which leads to drought-like conditions. New Golf Concepts says a golf green can be an excellent example of a soil which is too sandy to retain enough water to sustain healthy plant growth without constant irrigation and management.

Adding the product to the rootzone can achieve the needed balance between micro- and macro-porosity. Also, Isolite adds bacteriological temperature and water buffering especially important in sandy soils.

Read what supers say about this bentgrass

After 12 years of research and testing at Penn State University, PennLinks creeping bentgrass was marketed as a deep-rooting species which provides a grainless putting surface.

"PennLinks Tried and True Testimonials" is a compendium of testimonials from superintendents in the U.S. and England on the quality of PennLinks creeping bentgrass.

Tee-2-Green Corp., of Hubbard, Ore., says PennLinks sets new standards for upright growth, putting surface quality, wear tolerance and turf establishment.

Tee-2-Green also markets PennCross, PennEagle and PennWay Blend creeping bentgrass.

Creeping red fescue now on the market

Fine Lawn Research now offers Flyer, a new variety of creeping red fescue.

The company says Flyer produces a fine, dense, deep green turf which received overall quality ratings in the 1984 National Fine Leaf Fescue tests.

The firm says the variety is particularly suited to blend well with Kentucky bluegrass and enhances turf-type tall fescues and perennial ryes.

Turf-type tall fescue low growing, low maintenance

Rebel Jr. from Lofts Seed, Inc. is darker than other turf-type tall fescues, says Dr. Richard Hurley, VP and Research Director for the firm.

Rebel Jr. has a darker green color, offers moderately low growth with excellent performance in full sun or moderate shade and needs low to medium maintenance, says the company.
The variety adapts to a wide range of environments and is resistant to insect and disease damage.

Kentucky bluegrass ranks among the best

From Jacklin Seed Co. comes Suffolk Kentucky bluegrass, a variety which consistently ranked in the upper third in quality ratings of 72 like varieties, reports Jacklin.

Suffolk is a new, moderately low-growing, medium dark-green variety which has high test results in resistance to fusarium blight, powdery mildew, leafspot and dollar spot.

Three seed varieties enter the market

Three top-rated seed varieties from O.M. Scott & Sons Co. will hit the market as part of the Scotts ProTurf product line.

The varieties are: Sonesta seeded bermudagrass, Aztec tall fescue and Brigade (formerly Melody) hard fescue. Sonesta will have limited availability this fall. The company says based on National Turfgrass Evaluation Program results, the variety will be the highest quality seeded bermuda on the market.

Aztec, an improved tall fescue, will be marketed next year. Dark green and fine textured, the variety received high ratings in national trials in 1988 and 1989.

Brigade will also be on the market in 1992. Ranking fifth out of 93 entries, the hard fescue placed well in national fine fescue tests.

Starter fertilizer lends a hand on greens, tees

Lebanon Turf Products recently introduced Country Club 10-18-18 AOS starter fertilizer which the company claims assures successful seeding and even nutrient distribution.

Country Club 10-18-18 AOS (aerification, overseeding, starter) contains the 1-2-2 ratio including 35 percent organic nitrogen, 2.2 units water insoluble nitrogen for safe and sustained feeding and 100 percent sulfate of potash.

Lebanon Turf Products says the fertilizer may be used effectively in aerification and topseeding, providing sufficient amounts of phosphorus and potassium while keeping available nitrogen at a manageable level. Spoon feeding cool season turf in overseeding situations is possible.

Tall fescue blend fills need in Southeast

Confederate brand tall fescue blend addresses the needs of the Southeast turfgrass market, according to Turf-Seed, Inc.

The blend contains Olympic II, Apache and Monarch plus the newly-released Safari. Since Confederate is a branded blend, the company says it will be upgraded with newer, improved varieties as they become available. The Safari component has improved brown patch resistance that is important to the Southeast region.

Confederate has a dark green color, and a moderate growth habit, which Turf-Seed says makes it adaptable and quick to establish.

Bermudagrass seed in many quantities

Numex Sahara bermudagrass is now available in one-, three-, five- and 50-pound bags and a 25-pound pail, manufacturer Farmers Marketing Corp. announces.

Numex Sahara is a seeded, turf type bermudagrass with fine leaf texture, dark green color and uniform appearance, the company says. The variety shows superior drought avoidance characteristics and is recommended for lawns, sports fields, fairways, tees and roughs.
