work with you.  
6) Slow down your first quarter payments. Many purchases are made during the first quarter, but the payment for these purchases can be scheduled for the second and third month of the second quarter. Suppliers will work with you when you negotiate these payments in advance, rather than after you have purchased the items. Often, the interest a supplier charges for extending payments is slightly higher than the interest a bank would charge, but you do not use your line of credit up at the bank when you can negotiate this type of payment plan. Ask for a deferred or extended payment terms, and you will be surprised how accommodating some of your suppliers can be. Prior payment performance will be the basis upon which a supplier will decide if they are willing to carry your bill for a deferred payment system.

Snow thrower safety: don’t put your hands where you shouldn’t

- The biggest chance you have of injuring yourself while operating a snow thrower is by putting your hands where you shouldn’t.

More than 4,000 people require emergency room treatment every winter because of injuries from snow thrower-related accidents, reports the Consumer Products Safety Commission. These injuries are usually to the fingers, hands and arms.  
George R. Thompson, III, director of corporate communications for Briggs & Stratton Corporation, offers these snow thrower safety tips:
- Stop the engine before attempting to unplug the machine.  
- Use a wooden block to clear a clogged passage. “Even if the snow thrower is turned off, operators must make sure all moving parts have completely stopped before they attempt to unplug the machine,” says Thompson.  
- Read and understand all operating instructions. 
- Don’t touch hot mufflers, cylinders or fins.  
- Don’t fill the gasoline tank while the engine is running. Allow the engine to cool before adding fuel.

The marketing plan

As the Cheshire Cat told Alice, it doesn’t matter what road you take if you don’t know where you want to go.

by Rudd McGary, Ph.D.

- A big misconception in many green industry companies is that advertising equals marketing. But advertising is only one part of the marketing matrix.  

The idea that advertising can make up for other marketing inadequacies is a fallacy. When several companies I know severely curtailed or eliminated their advertising for a whole year, the overall effect was actually positive. They saved money on advertising and, in addition, attracted new customers through other means.

Marketing plans usually take at least a year to fall into place, since they contain many parts. Impatient management is the greatest impediment to a marketing plan’s success.

Here are some key elements to a successful marketing plan:
1) The consumer—What does the customer want to buy? How much will they pay for it? How are you going to determine this information?

One of the factors in planning is that not everyone buys lawn care, nor tree work, nor design/build services, nor irrigation. Each segment of the population buys different services in different ways.

Ask the consumer what he/she wants. It’s always best to ask in person, second-best to ask by phone, and third to ask by mail.

2) Control—If you’re going to spend money in advertising/promotion, you should have a way of determining whether or not you get a return on the money you’ve invested.

3) Sales staff and management—You need to understand what the sales force is to do, how it is to be managed, and how the rest of the marketing activities fit in with the sales force actions.

4) Mix of services—Have a clear focus. I’ve worked with many companies that have branched into areas that don’t exactly fit into their original mission. The classic line is that “we went into (fill in the blank) because we had someone who could do it.” Make sure your customers want it first.

5) Outside influences—How will reports on 2,4-D affect the lawn care business? Will a down economy do to the buying patterns for services? Regulatory, economic and environmental issues are as important a part of planning considerations as any of the internal issues.

6) Owner needs—What is satisfying to the owners of the company? For instance, in a small company, the owner is probably also working; in a publicly-held company, there may be thousands of owners peering
