Word to the wise:
Watch out for OSHA citations

• "OSHA people are not the kind of people you want to get mad," says Mary Malotke of TechneTrain, Milford, Ohio.

Pursuant to the Occupational Safety and Health Administration’s (OSHA) regulations, small businesses must maintain a safe working place, especially those places that use hazardous substances like pesticides and hazardous equipment like lawn mowers.

Small businesses are subject to unannounced inspections by OSHA teams, and with the inspections could come citations for violations of the rules. The Hazard Communication and Worker Right-to-Know rules are contained in the first part of an OSHA inspection, Malotke notes.

She says that the most common OSHA citations are:
1) no written program
2) no employee training
3) no MSDSs for the chemicals on premises
4) no in-plant container labels
5) MSDS file not up to date
6) no chemical inventory
7) no written chemical hazard determination (program)

Written programs—The key elements to a written program, the most common OSHA violation in the green industry, are:
• what you are and what you do;
• key work areas and their managers;
• the name of the person responsible for the list of chemicals and MSDS file;
• the person responsible for reviewing MSDSs and chemical lists;
• what training includes;
• who handles training;
• how new hazards are assessed; and
• protective and emergency equipment available.

Training programs—Training programs, the second-most common OSHA violation, should include:
• information on the Right-to-Know laws and your company’s program;
• basic information on the chemicals and their physical hazards;
• how to read an MSDS and pesticide label;
• where MSDSs and the written program are kept;
• where special hazards are located; and
• protective and emergency plans and procedures.

Facility requirements—Malotke also says that each facility must:
• list chemicals and where they’re kept;
• label all containers;
• train employees in safe handling procedures; and
• create a safe work environment with safety/protective equipment.

OSHA representatives can help you with questions, but if you ask them to your place of business, they are bound by law to cite any violations they might see.

—Jerry Roche

Hazardous substances checklist

• If your small business deals with pesticides or other hazardous substances, the Occupational Safety and Health Administration dictates that you follow certain rules in handling and applying any such materials.

The rules were established by the OSHA Act of 1970 to help prevent accidents in the workplace, and thus provide for the continuing safety of your employees.

The OSHA, in its publication 2209, issued a list of checkpoints for small businesses in their handling of hazardous substances. Here is that list:
• Are employees trained in the safe handling of hazardous chemicals?
• Are employees aware of the potential hazards involving various chemicals?
• Is employee exposure to chemicals kept within acceptable levels?
• Are eye wash fountains and safety showers provided in areas where the chemicals are handled?
• Are all containers labeled for their contents?
• Are all employees required to use personal protective clothing and equipment when handling chemicals?
• Are flammable or toxic chemicals kept in closed containers when not in use?
• Is the contents of chemical piping systems clearly marked?
• Is adequate means readily available for neutralizing or disposing of spills?

Government a great resource

• The federal government’s main reference for information on OSHA is:

To order "Job Safety and Health Protection" (the OSHA workplace poster), the OSHA recordkeeping requirements, a copy of the appropriate sets of standards, and other publications, contact your local OSHA Area Office. There are 85 such offices in the U.S. and its possessions.
Surviving crises in the workplace

by Ed Wandtke

Most of us are aware of the feelings and emotions we experience when being told a family member has died, or have received a call to go to a hospital because an injured friend is being rushed there. When a crisis occurs, all other concerns come to a sudden halt.

With changing technology, a smarter workforce and more dependence on high technology, we have become dependent on technological advancements. The price for technological advancements may be an increased opportunity for a crisis.

Learning how to plan for, and deal with, crises often helps to simplify the crisis when it occurs. You, as an owner/manager, can take several steps to make crises easier to deal with:

1) Plan for the unexpected. You might deal with unexpected problems each day: a sudden weather change, a sick technician, a truck accident. All of these situations can cause a crisis, but if you have advance contingency plans, you will find these crises are only inconveniences. For example, having an extra truck available and an extra technician for the busy season is a good way to ensure that work gets done.

2) Recognize emotion when it impacts you on the job. We often pretend that emotions don't influence us in our business actions, especially in this male-dominated green industry. But when a crisis does occur at work, emotions really come into full view. Don't let these emotions take over and rule your actions.

Remember, you need to remain as objective and as understanding as possible.

3) Recognize the supporting cast. When the company successfully survives a crisis, sometimes the managers get most of the credit. But if your company is faced with hard times, your employees are the ones who often pick up the slack and pull it through. Giving your employees the recognition they deserve is a sign of a company that knows the true value of an employee.

4) Handle change with flexible employees. It is amazing how well we can deal with change. When weather influences a planned activity on a given day, we are forced to change the schedule. Most companies have learned to deal with change, and many owners even put extra stress on their companies when they change their minds from morning to evening. Make sure, as owner, that you strive to be consistent. Employees are asked to deal with enough change, so owners should be the stability they can count on.

5) Don't create your own crises. One aspect of most businesses is the need for secrets and confidential information. "Who knows what" is often a very discomforting situation among employees. If someone is being fired and someone else finds out in advance, distrust is provoked. Employees like to know where they stand in order to feel in control of their own destinies.

6) Keep your goals in aim. Often, a crisis will cause many employees to suddenly rush to solve a new and unusual problem. Who then takes command to refocus the employees back on goals? In many companies I have seen too much time wasted on activities that will not increase profitability or goal achievement. Many companies, however, have found that using an industry-experienced consultant can be effective.

Crisis, though infrequent, can be a real trial. Learning how to deal with a crisis, having an individual ready to back up your positions, and knowing when to seek outside help can make crisis resolution easier.

Remember, crises usually happen when you think you have every base covered. Advance planning and knowing where to get assistance will help you make it through whatever might arise and make your company more resilient.
