Utility trailer has big 1,000-pound capacity

Columbia ParCar has brought the Direct Track Utility Trailer to the landscape management industry.

The trailer follows the path of the towing vehicle easily thanks to four-wheel steering. The wood trailer deck measures a generous 44 x 72 inches and includes 14-inch high steel side rails.

Fabricated with powder coated steel, the trailer has a 1000-lb. payload capacity and will connect with any 1-½-inch ball hitch.

Trailers can connect to one another for train-like applications. An optional suntop can be purchased for protection from weather.

Underwater aerator works well in shallower water

Toro's new Submersible Aerator addresses both aeration and mixing requirements in one package to enhance any aquatic setting.

A highly efficient pump draws air from an air hose above the water surface and injects it through a specially designed nozzle near the pond bottom.

The fine-bubble discharge thoroughly mixes the oxygen with the water, destratifies and provides horizontal water circulation with no additional components or accessories.

The aerator limits growth of pond algae, and stimulates decomposition of organic wastes and runoff nutrients.

The aerator operates in water as shallow as two feet.

Standard systems are available in 0.5, 1.0, 2.0 and 3.0 hp models, single or three phase, 115, 230 or 460 volts.

With Formulating Plants located in Florida and Wisconsin KOOS•SHORE can fill all your needs:

1. Fertilizer Blends featuring Nutralene, sulfate of potash and minor elements.
2. Fertilizer Blends formulated with pesticides from an extended list of turf labels.
3. Mini Size homogeneous fertilizer products for the golf course.

When your grass is on the line call:

Pre-emergence herbicide controls six grassy weeds

Pendimethalin pre-emergence herbicide controls six annual grassy weeds, including crabgrass and goosegrass and nine annual broadleaf weeds, including tough-to-control oxalis and spurge.

American Cyanamid says pendimethalin allows for season-long control of troublesome weeds, including goosegrass, with a single, properly-timed application.

Turfgrass shows tolerance to the product, even when applied at highest rates. Used as directed, pendimethalin offers a wide margin of tolerance on a variety of cool- and warm-season grasses.

The product is also labeled for many ornamentals.

Utility vehicle combines balance, comfort, power

Jacobsen's new SV System Vehicle work trucks feature an engine-forward design, 2,800 lb. load capacity and the combination of four-wheel stability and three-wheel maneuverability.

The SV-2322 is powered by a fuel-efficient 23 hp diesel engine.

The SV-3422 has a 34-hp gasoline engine. Each provides the power needed for spreading, spraying, topdressing or even towing a 5-gang mower attachment.

The engine-forward design offers three advantages, according to Jacobsen: better vehicle balance, more operator comfort and easier maintenance.

Four-wheel drive adds stability. Turning diameter at the rear wheels is less than 3-feet.

Both models have eight forward speeds and reverse. Hydraulic attachments are available.

New utility vehicle added to existing product lines

Kawasaki has made an addition to its line of multi-purpose vehicles.

The Mule 2500 is built for use in farm, ranch, construction and other commercial and private applications.

The vehicle is two-wheel drive with dual-mode differential, and features a 617cc twin cylinder, four-stroke liquid-cooled engine.

Kawasaki now has five utility vehicles on the market.

The company also has the 'Bayou' line of all-terrain vehicles. Models are the Bayou 400 4x4, the 300 4x4, the Bayou 300 and the Bayou 220.

The four-wheel drive Bayou 400 has a 242 lb. cargo capacity, and is powered by a 391 cc liquid-cooled engine.

The Bayou 300 4x4 also has full-time four-wheel drive, dual-range 10-speed transmission, automatic clutch and 8.9-inches of ground clearance.

The 300 has double wishbone front suspension, torque tube Quad-link rear suspension and adjustable pre-load shocks. Brakes are dual discs in front and rear drums.

Look for this new line of potassium nitrate fertilizers

Vicksburg Chemical Company makes available its K-Power line of potassium nitrate fertilizers during the 1994 GCSAA show in Dallas.

The K-Power line includes four varieties of potassium nitrate fertilizers: Greens & Tees; Fairways—with the MultiCote controlled release system; a Combination formula; and Water Soluble, with selected micro-elements in a dry, crystalline form.

The MultiCote is a polymer coating designed to feed turf a steady and continuous supply of nutrients.

The company calls this the first controlled-released potassium.

Michael Larisey, market development manager, says the product's balance of potassium to nitrogen offers turf growers several benefits, including stronger turf that is better able to resist fungus, insects and heat stress.

According to Larisey, the K-Power products can lessen the occurrence of leaf spot, fungal leaf spot, dollar spot, spring dollar spot and Gaurnannomyoes graninis.

Spray tips reduce drift, give optimum turf coverage

New, Mark II Lo-Drift spray tips by Lurmark, Ltd. offer an innovative, engineered spray droplet spectrum that significantly reduces drift. At the same time, the tips allow for optimum spray coverage of systemic and contact herbicides.

The tips fit all existing bodies and caps, and are suitable for spraying foliar and soil-applied herbicides.

The pre-orifice alters the range of droplet sizes in a way that can't be achieved by standard flat spray tips and extended performance tips, regardless of spraying pressure.

According to the company, virtually all spray droplets of less than 100 microns are eliminated, without affecting the sizes of the remaining droplets.

Sprinkler riser lets you raise heads without excavating

Olson Irrigation Systems markets the TSR-1, a threaded sprinkler riser that allows superintendents to turn sprinkler heads without excavating the entire swing arm assembly.

The TSR-1 fits between the swing elbow and the sprinkler head. When the sprinkler is rotated, the head is elevated or lowered by up to 3-inches.

The riser's threads are sealed so repeated adjustment is no problem, and the TSR-1 holds its setting.

The unit works with all 1-inch rotors, and with 3/4-inch heads, using a reducer bushing.
