**Hand tools 2000**

Structron Corporation, a leading manufacturer of extra-strength, construction-quality, fiberglass-handled tools for lawn and garden uses, has released its new "Tools of the Future" catalog.

The catalog details key specifications and features of the company's eight new tools, including its Superhandle line of products. Tools include a drain spade, general purpose steel scoop and a solid-shank irrigation shovel.

**Newspaper mulch keeps moisture in soil**

PennMulch, developed by Penn State agronomy instructor George Hamilton, is made from shredded newsprint and recycled paper. It protects seedbeds, retains moisture in turf and acts as a fertilizer.

The product comes in pellets and is easy to handle. According to Hamilton, golf course superintendents find the product effective at retaining moisture, reducing erosion and protecting turf seeds from temperature extremes.

Other uses, such as winter cover on golf courses, are being researched.

**Digging system handles many turf jobs**

The Dingo digging system of hydraulic power tools helps handle tough, labor intensive landscape and irrigation jobs.

The Dingo is a compact, skid-steer machine that delivers 3000 psi of hydraulic pressure to a variety of implements.

Attachments are easy to change, and one person can pop off one implement and fasten on another within one minute. The operator stands on a platform at the rear of the machine.
