The National Safety Council says the major hazards to anyone who deals with tree maintenance include:

- falls from trees
- contact with electrified limbs
- trees and branches falling on workers
- faulty work methods
- high-speed power equipment.

(The U.S. Consumer Product Safety Commission says that each year, 40,000 chain saw injuries require emergency care.)

- noise from the machinery

"I think back to all of the brittle trees we took down and how lucky we are not to have been hurt," says Crowley co-worker Timothy Nickerson.

At the ArborMaster training program, Crowley worked with arborists, utility crew and tree maintenance workers in three, one-day sessions. Each of the course's three days are separated by several weeks, to allow students to absorb and practice the lessons of the previous session.

"The three-level program teaches strong foundational skills, so it can be tailored to individual needs," Palmer says.

More landscapers have become involved in the program as more customers prefer one company to do the majority of work on their property, Palmer says.

Crowley says risk to himself and his employees have been minimized, thanks to ArborMaster. He and his employees also wear uniform safety apparel and follow safety procedures closely.

He's now a firm believer and follower of the "HOPE" system. HOPE is an acronym for—Hazards, Obstacles, Pre-plan and Equipment.

Crowley says ArborMaster Training gave him a new professional attitude.

"Before, he felt like he was missing something, not doing the job the best possible way," Nickerson says of Crowley. The training has also given him added confidence. LM
