The Labor Crunch
Finding a few good people
When it comes to preventing the broadleaf and grassy weeds that most often plague your customers’ turfgrasses, PRE-M® preemergent herbicide is right on target. Why pay more for other products when, time after time, university trials prove that PRE-M offers you better overall performance combined with unmatched value?

Superior performance made PRE-M the leading* preemergent herbicide. Superior value widens the gap. PRE-M is everything you’d expect from LESCO®, the leading supplier in the professional turf care industry.

Ask your LESCO professional or call 1-800-321-5325 to learn how you can earn generous rebates for your PRE-M purchases.

Get behind the leading edge.

Always read and follow label directions.

No, this isn't a closeout sale. It's the Honda UMK Series, 4-stroke trimmer/brushcutters. Thanks to some dramatic reductions, now you really can do more with less. Honda's UMK trimmers take advantage of their 4-stroke engine's combustion format to dramatically decrease noise. 4-stroke engines are well known for producing fewer emissions than comparably sized 2-stroke engines, making them very environmentally friendly. In fact, Honda's trimmers meet all EPA and CARB emission standards. Honda's trimmers use straight gasoline, eliminating the hassle of mixing gas and oil. And they can run two times longer than comparable 2-stroke engines on the same amount of fuel. The engines also suppress spark plug carbon buildup and carburetor clogging, maintaining like-new starting ease. Starting under $320, Honda's hard-working, durable string trimmers are some of the most efficient and cost-effective string trimmers available.

For a free brochure and location of the Honda Lawn & Garden Dealer nearest you call 1-800-426-7701.

For optimum performance and safety, please read the owner's manual before operating your Honda Power Equipment. ©1999 American Honda Motor Co., Inc.

Any way
the wind blows.

NEW, NO-DUST, LOWER-ODOR Orthene® Turf, Tree & Ornamental Spray 97 blows away any other turf insecticide.

New ORTHENE 97 controls more than 40 pests (far more than Chipco® Choice®).

ORTHENE 97 controls through both contact and local systemic activity (more than Talstar®). So ORTHENE 97 is one of the most COST-EFFECTIVE turf insecticides you can buy.

Best of all, its patented 97 PERCENT PELLET delivers genuine ORTHENE performance in a smooth-flowing formulation that improves handling convenience and measuring accuracy while it reduces odor and virtually eliminates dust.

Find out about new ORTHENE 97 from your distributor or through the Valent web site at www.valent.com.

“T his millenium, I’m planning ahead, and I mean it!” I vowed, along with millions of others. How about you? Will this be the year when you make plans instead of promises, or develop written business goals and a program to achieve them? I believe that you can achieve those things if you work for them.

So how will you work at hiring employees this year? I’m sorry to say if you don’t have a plan in place right now, you’re already out of this year’s game. You might get lucky, but the best people will go elsewhere.

“What? I haven’t even written our clever new want ads yet!” you shriek. “I’m still developing our internet search strategy. It’s not too late — it’s only February!”

Sorry, you’re wrong. It’s too late to start planning because right now, you should be planning for February 2001, 2002 and 2003. In fact, you should be planning all aspects of your business for the next five years, and not just your hiring plan. The “people” is critical to building your organization of the future.

That’s one thing I’ve learned from the experts who contributed to our series on labor, which starts this month. I’ve also learned it from observing the most successful managers in our industry. They don’t recruit, hire or retain people as an afterthought. They plan like hell for it.

Why? Because the numbers are stacked against you. The “available” workforce will shrink even more in upcoming years and you’ll have to look for “nontraditional” workers and use new systems to keep them. It’s going to be a lot harder in the future.

So here’s my recipe for playing today’s and tomorrow’s labor game successfully:

1. Think and act long-term. Be purposeful and plan years ahead to have the organization, relationships and systems that feed people with potential to you, and keep them there for the long term.

2. Network like crazy. Reach out to “nontraditional” employees and build creative alliances for hiring and training.

3. Be a leader. Everyone can’t be a leader, but you can be the best at something. You can have an organization that grows its people along with its business — and you’ll have to.

Too many of you tell me that the key factor keeping you from growing more is lack of good people. If this problem is so critical, you need to work hard — short-term and long-term — to solve it.

Our coverage this month starts on page 48. We’d love to hear your sources for people, your ideas for training and your methods of slowing turnover for future articles. If you have the time, please give me a call at 800/225-4569 x2729, or email me: sgibson@advanstar.com.

Welcome Jason Stahl
It’s our pleasure to welcome Jason Stahl as managing editor of Landscape Management and our sister publication, Athletic Turf. Jason joins us with several years of experience in publications and is already learning plenty about the ins and outs of professional landscape work. He will cover many industry events and has already started developing several features on our industry, like his piece in Industry Almanac, page 32. You can reach him at 440/891-2623 or jstahl@advanstar.com.
New Compass™
Locked-in disease control for both lawns and landscape ornamentals at the lowest rates ever.

New Compass controls Brown Patch, Leaf Spot, Gray Leaf Spot, Red Thread, Rust, and more.

Effective for all turf areas and all species, Compass fungicide delivers the value of a contact, the power of a systemic. In fact, it's the best Brown Patch value ever developed. Compass also goes on to control important ornamental diseases, such as Apple Scab on crabapple and flowering cherry trees.

Compass gives you preventive and curative options.
Compass delivers the highest efficacy against Brown Patch and a broad spectrum of diseases at the lowest use rates ever. One pound of Compass at 0.15 oz/1,000 sq. ft. rate covers 2.45 acres of turf.

New technology, yet competitively priced.
With unique mesostemic power, Compass delivers locked in, broad-spectrum control at a price you can afford.
Just in time, a reduced-risk fungicide that is environmentally sound.

Compass has been classified as reduced-risk. So you can use it with confidence.

Mesostemic power ensures locked-in, rainfast disease control up to 28 days.

Compass securely locks into the plant surface due to its high affinity with the surface. Forming a protective reservoir of fungicide on the plant surface, it resists washing off, thus ensuring long-lasting disease control.

Important: Always read and follow label instructions before purchasing or using these products. ©1999 Novartis Crop Protection, Inc., Turf & Ornamental Products, Greensboro, NC 27419. Compass™ and the Novartis logo are trademarks of Novartis.

I’m your go-to guy.
I carry all your tools. And keep you in the green. I’m always on the job. And hardly ever rest.

I live for work.
When your business relies on the growing season, every day is a push for profit. We’ve engineered the classic Sierra® to take the heat. Even on your busiest days.

To start, the classic Sierra 3500 HD has a base payload capacity up to 9,232 lbs and is available in three wheelbases. Its flat frame rails are mounted close to the ground for easier body installation.

Choose the standard 290 hp Vortec™ 7400 gas engine or an available 6.5L turbo diesel with 195 hp to keep your business moving forward. And count on our standard four-wheel antilock brakes to help you maintain steering control even during adverse conditions.

The GMC® classic Sierra is relentless power and reliability at your command.

Bring me on the job.
Call GMC at 1-800-GMC-8782. Or visit www.gmcforwork.com.
**your good judgment**
Will tell you to select

**turf type**
Tall Fescue seed from Oregon

**the beauty**
of the blades

**the strength**
and durability

**the tolerance**
to drought & disease

**the quality!**

Look for the grown in Oregon label. It puts all others in a lower class. A lush, healthy, deep green turf is your reward for selecting superior seed. The world's leading turf grass breeders have been perfecting it for more than 20 years. The tough, vibrant turf will not only tolerate drought, but survive cold winters.

When you select Turf Type Tall Fescue seed from Oregon you can be sure you will enjoy your "good judgment" decision year after year.

Standing the test of time

For a family business to survive and prosper from year to year, decade to decade, it must refocus and redirect its efforts as market conditions change.

Just ask William E. Akehurst of Akehurst Landscape Service, Inc., Joppa, MD. He represents the fourth generation of the Akehurst family involved in the green industry. He works elbow-to-elbow with several fifth generation family members. The Akehursts have, in one way or another, participated in the professional landscape industry in Maryland and surrounding areas for more than 130 years.

Today, their offices are located in a tidy ranch-style house on a ridge just east of and overlooking I-95. The location allows company crews quick access to Baltimore's eastern and northern suburbs.

This year, they want to purchase some land to expand their operation headquartered just north of Baltimore. They plan to grow more landscape plant material, too.

In a sense, they are returning to their roots because the family first began growing commercial plant material near Baltimore 133 years ago. It all began when Charles Akehurst and his son, C. Edward, produced flowers such as carnations and violets along with vegetable plants in 1876. Then came rose bushes for the garden trade and, early in the 20th century, the family expanded into cut flowers, including prize-winning carnations and roses.

Succeeding generations modified the business to meet changing market conditions — and the process continues. Today, the company offers a full range of landscape services, both exterior and interior.

William E. Akehurst, the patriarch of the operation, is joined in the business by his three sons, William K., Brian E. and John C. They, along with other family members, work together daily, each responsible for a particular part of the company. Son William K. heads the landscape division, son Brian runs grounds maintenance, son John C. the interior-landscape division and nephew Jay F. Tarleton is the company's administrative officer.

While the elder Akehurst acknowledged that each family member has a distinctive style and there are, from time to time, disagreements within the family business, every family member works cooperatively to keep the business competitive and responsive to customer needs — and each is willing to improve and redirect the operation's services to meet an ever-changing marketplace.

"...Every family member works cooperatively to keep the business competitive..." — RH
It's called "Maximum Effort" — giving everything you've got...

"I can already hear you asking: ‘Dwight, how can you afford that level of compensation?’ The answer is productivity and profitability.

Our people are productive

Labor is in short supply. We in the green industry have to jump through hoops to come up with enough people. So we bite the bullet, jump through those hoops, live with the turnover, go through the hiring cycle over and over again, and complain the whole time about how hard it all is.

Sound familiar? Actually, the story is not new. Historically, the attitude has been that our industry can’t hire good people because we’re seasonal and low-paying. We assumed that what we have today is what we would always have: a relatively large number of unskilled, low-salaried workers who presented all kinds of hiring problems — not to mention retention problems. We lived with those problems, and complained about them.

Maybe you live with them today. But at Dwight Hughes Nursery, we don’t.

You may have heard of us and our philosophy — we’ve attracted some industry attention with our success in modernizing operations. Like most other companies in modern times, except in our industry, we have invested time and money in systems that promote success. These include mechanical systems, management systems — and our people.

Find good people

For starters, we do not go looking for just anybody. I used to be on the advisory board of our local community college, which has a two-year program in horticulture, landscape maintenance and design. If we need an employee, that’s where we go first.

We look for a certain kind of person, hopefully having some of the following:

- a farm background, with an understanding of the agricultural work ethic
- experience with machinery and equipment
- physical strength (still needed, even though our systems rely on machinery whenever possible)
- a love of outdoor sports, especially all-day activities like hunting and fishing, because this can indicate a person well-suited to working in cold, windy, damp, broiling or otherwise unpleasant weather.

We’ve had wonderful results with this methodology, and I recommend it to you strongly.

Keeping them

After we find someone we like, how do we get them on board? After all, there are a lot of vacant jobs out there today looking to be filled. Our answer to that question is to make the investment and offer our employees a job that is rewarding and satisfying. We put out the effort and the dollars to offer them things like:

- Their own space: A lunch room they consider their home base offers them an ice machine, a refrigerator loaded with free soda pop and fruit juice, a big utility sink and a microwave oven.
- Field trips: We take field trips to our growers, major suppliers and equipment manufacturers. We pay our people for their time during these trips, and, as often as possible, tack on some fishing to the end of the day. Once a year, we rent a ‘company

TOP 10 REASONS TO BUY KAWASAKI ENGINES AND POWER PRODUCTS.

9. The most reliable name in small engines.
8. They look great hanging on the wall behind your Kawasaki motorcycle, ATV or Jet Ski® watercraft.
7. They're built for pros and homeowners who use them all day (why? see #6).
6. Comfortable, low vibration, perfect balance.
5. So durable you can put them in your will.
4. Easy to start, easy to maintain.
3. Your staff will beg you to use them.
2. Friendly, helpful dealers.
1. Kawasaki engineered. They are the best you can buy.

WORLD CLASS ENGINEERING IS AT THE CORE OF EVERY KAWASAKI
Want to cruise through your workday? Get a grip on a powerful KAWASAKI STRING TRIMMER and get! Our 23, 26, and 34 cc models use 2-cycle technology to boost power in addition, the compact engine, plastic shroud, and hollow, splined shaft minimize weight for a more comfortable and efficient work day. A glass-wool muffler keeps them super quiet, and a large mounting damper and special grip keep vibration lower than ever. Handling is well-balanced.

All the Right Power! Every day more and more professionals demand Kawasaki engines for their new equipment and their repower projects. Kawasaki powerplants are built to work hard, run quiet and last a long time, with all the features professionals look for in quality power.

The Right Power For Lawn Care. Among the many Kawasaki engines used in the lawn care industry, the FH Series powerplants set a new precedent. They range in size from 15 HP model designed for small- to medium-sized walk-behind mowers to a 23 HP model that's perfect for large walk-behinds and riding equipment.

Pour In Kawasaki 4-Cycle Oil And Double The Warranty! When you pour Kawasaki 4-cycle oil into your Kawasaki powered equipment, not only do you get high quality oil you get double the engine warranty. You read that right! At Kawasaki, we believe that our 4-cycle oil is so effective in extending engine life, we double the internal engine warranty. Remember, not all oils are created equal. And with twice the warranty, there's no reason to use anything less than Kawasaki oil for Kawasaki 4-cycle engines, generators and pumps.

Our sharp 24” double-sided and 30” single-sided models feature powerful, easy-starting Kawasaki engines, rubber-mounted lower vibration on motorcycles...and KAWASAKI HEDGE TRIMMERS.

Rubber-mounted engines are designed to deliver unmatched durability and performance. Plus features that add an extra measure of convenience and safety.

Let's Talk Trash. We're not about to bad-mouth the competition. Let's just say nobody builds harder working TRASH PUMPS, SEMI-TRASH PUMPS AND WATER PUMPS than Kawasaki. We build them the way they should be built, with world-class engineering. You'll find the fuel gauge and all main controls in one location for easy, safe operation. And extra features like pressure-lubed engines and an engine-balance system on some models. You can depend on these rugged 4-cycle Kawasaki engines for all water and trash removal jobs. Kawasaki pumps. They just work harder:

Warning: Special precautions must be taken to avoid shock, injury and/or property damage when using a generator as an alternate power source in any building. Always check with the power utility and refer to the operator's manual before attempting any such applications.

Visit our website at www.kawpowr.com

$50 Trade-in Program is available only at participating dealers.
plane' and fly somewhere a little farther away. These trips are educational and fun, and build a sense of company identity.

**Job rotation:** Like most landscape companies, our people tend to become specialists over time. But we are willing to shake things up. If someone expresses an interest in something new, we really try to figure out a way to let them do that on the job. Employees appreciate this opportunity, which helps foster a sense of teamwork.

**Excellent tools and equipment:** Never underestimate the thrill people get when you allow them to work with well thought-out, well-maintained systems and tools. This should be a no-brainer for you. Think about how much you like laptop computers, cell phones and new trucks. What makes you think your employees are any different? A major element of their job satisfaction is having good systems and tools (for example, our trucks have cell phones in them so we can communicate all the time).

**Great compensation:** Yes, we offer our people a much better compensation package than is typical in our industry. Our hourly scale of $10 to $15 per hour is pretty good pay in our part of the country. Full-time employees get time and a half over 40 hours, and since we work 50 to 60 hours a week in season, that overtime really adds up.

All four of our workers have a complete company-paid health care program; a pension plan to which we contribute 10% of their salary annually; and a profit sharing plan equalling up to 15% of salary. In a good year, the pension and profit sharing plans add 25% to their income. We also offer a lot of small but important perks, like company caps, shirts, and jackets.

**Can you afford it?**

I can already hear you asking: "Dwight, how can you afford that level of compensation?" The answer is productivity and profitability. By investing in systems — and people — that allow us to do more with less, we generate over $100,000 a year in revenue per employee. With financial numbers like those, we can afford to provide better compensation packages, better tools and paid field trips. Get the picture?

One more thing: not only is hiring an integral part of our "System for Success," but it has effectively solved the turnover problem. In 22 years, we've had three foremen. The first two went on to start their own businesses, and the third is still with us. Laborers have stayed with us for an average of six years, and some of those who left did so to start companies of their own. (That's always a bittersweet experience after the investment we've made in them, but I'm also proud of their achievements. And since our plate is full, it's not as if they've stolen any business from us.)

In this day and age, we think that a turnover rate of once every six or seven years is nothing short of amazing. Especially since it's part of our overall success!

— The author is president of Dwight Hughes Nursery in Cedar Rapids, IA, which is recognized throughout the industry for innovation. Dwight is a board member of the American Nursery and Landscape Association's Horticultural Research Institute, and has attracted national attention for his work in developing robotic equipment for use in the green industry. His book and videotape, "Systems for Success," detail his methods (Published by Dwight Hughes Systems, Inc., Cedar Rapids, IA, 1996; 319-396-7038; fax 319-396-9139).
Using time-tested principles puts the odds in your favor, but it doesn’t make it easy. The biggest problem you’ll have is separating the investment wheat from the chaff.

It’s your money: Get good help

Have you seen those investment flyers promising triple-digit returns if you’ll buy some secret guaranteed to bring investment riches? Truth be told, I’ve bought more of those than I care to remember.

On the other hand, don’t try to do all of your investment research by yourself. As usual, prudence is somewhere in between. Just because the next decade will involve gadgets that think and talk back to you, don’t think that the principles of investing will change because your accessories will. They won’t. Stocks go up because they are from good businesses or represent perceived value, not because of some secret theory.

K.I.S.S.

If you are new to investments, start out with a long-term horizon. We’ve experienced four exceptional years in a row. The odds do not favor another four years of this, so you should probably lower your expectations a bit. Using time-tested principles puts the odds in your favor, but it doesn’t make it easy. The biggest problem you’ll have is separating the investment wheat from the chaff. Keep it simple and don’t forget your common sense. Unfortunately, that is easier said than done.

Let’s start with some basics:

- Other than for an IRA or pension plan, before you even think of investing in earnest, pay off your credit card bills. That’s a guaranteed return equal to the rate of interest on your card.
- Become informed. Use libraries or the Internet (it has so much information it can almost be too much).

A good place to start is the "Motley Fool" (www.fool.com/index.htm). Its "school" will walk you through a simple plan that you can use for the rest of your investing life. The site is funny and informative, and it puts things into proper perspective.

Work your money

Now comes the hard part: deciding on a plan that is best for you and staying with it through the inevitable ups and downs of the market. In principal, it might seem easy. Statistically, however, many investors who try to do their own thing end up needing help.

My favorite study was by Morningstar, a well known investment information firm. From 1984 to 1994, a random sampling of mutual funds produced an average return of just under 13%. In 10 years, they were up roughly 300%. Things could be worse. Those investors who tried to move in and out with the market’s ups and downs or changed to whatever fund was hot at the moment averaged less than 3%.

If you are new to investing, remember this and hold it close to your heart: Human emotion and reaction work against you. This is why I always recommend you take some portion of your investment money and have it managed professionally. Take it out of your hands.

If it was easy to make consistent 20% returns, everyone would do it. This is why I recommend an active, conservative money manager for someone starting out. Most investors are not suited to last through the harrowing times of a bear market. They exit at the wrong time.

Affordable Mycorrhiza

**MYCORRHIZA:** fungi that colonizes plant roots and extends the root system into the surrounding soil, providing the plant with improved nutrient uptake, disease resistance, and superior survival and growth.

**AFFORDABLE:** least expensive mycorrhiza available today in one package.

**M-ROOTS™:** the name of the product with twelve species of affordable mycorrhiza, creating an inexpensive way to get your valuable plantings over the stress of poor soil, dry weather, and other harsh conditions.
Bob's key strategies:

- **Pay off credit cards first.**
- **Study investing for background.**
- **Visit Web sites like Motley Fool.**
- **Allocate some of your investments for professional management.**

Like so many other things in life, sometimes professional managers accomplish investment growth, sometimes they don't. Some of my favorites are:

- Schield 800/275-2382;
- PSM 800/433-7750; and
- KFCM 888/345-5326.

Some professional managers, however, specialize in staying invested in the hottest groups and then get out of them when they turn cold. The idea is to keep pace with an average growth fund, but have less risk while doing it.

If you want to discuss it, you can e-mail me at rkbaird@home.com. And keep "Murphy's Law" in the back of your mind. Though the market is not out to get you, it does seem that way sometimes. If you are patient and your plan is based on good investment logic, you will put the odds in your favor. Most people don't.
Setting an international standard for “Fast, Easy, Beautiful Mowing”™

- **FAST**
  Walker completes the job **fast** using a balance of consistent ground speed, quick maneuvering, and trimming ability. In many applications, Walker wins the job time race, even in comparison to larger mowers with faster ground speed (it is job time that counts).

- **EASY**
  Walker takes care of the operator with comfortable seating, good visibility, and easy-to-operate, responsive controls providing full productivity and best use of labor.

- **BEAUTIFUL**
  While “mow and blow” may be an acceptable standard for some mowing jobs, Walker offers beautiful mowing, vacuuming, mulching, and manicuring for discriminating customers. Some of the most beautiful grounds in the world are mowed by Walker.

We invite you to see a demonstration of Walker’s “Fast, Easy, Beautiful” mowing on your property.

**Becker Underwood acquires Rejex-it**

AMES, IA — Becker Underwood Inc., Ames, IA, recently acquired the Rejex-it® Wildlife Management Products division from PMC Specialties. This acquisition comes on the heels of others Becker Underwood has made involving Lan Colorant Products, Sequestrene and Sprint chelated iron products from Novartis, Turf Health Care and NutraSol. Rejex-it products are EPA-registered animal aversion products which modify or deter animal encroachment problems.

**Netafim USA and Motorola unite**

FRESNO, CA — Netafim USA’s open field controls will be brought together with Motorola’s advanced wireless irrigation remote technology now that the two companies have formed an alliance. Netafim USA, the largest and fastest growing business unit of the Netafim International Group, the inventor of advanced micro-irrigation technology, views Motorola’s new technology advancements as completing its offering in open field controls, open field fertigation, greenhouse applications and phytomonitoring.

**Riverdale, DuPont sign deal**

GLENWOOD, IL — Riverdale Chemical Co. signed a letter of intent with the DuPont Company to market formulations of two chemical active ingredients to professional turf managers in the United States.

**AgriBioTech files for bankruptcy**

LAS VEGAS, NV - AgriBioTech Inc. and its operating subsidiaries filed for Chapter 11 bankruptcy last month in order to implement an operational restructuring and financial reorganization.

Chairman and Chief Executive Officer Richard Budd offered six reasons as to why AgriBioTech has suffered significant losses and a lack of current liquidity:

- Oversupply of seed with a downturn in industry pricing;
- Difficulties with integrating the operations, culture and accounting systems of 34 companies into single operational units;
- Delays in bringing seed to market;
- Reduced revenues;
- Higher-than-expected expenses;
- Slow cash collections from a weak agricultural economy.

**STOCK PRICE SLUMP**

According to a story from cnetnews.com, a record trading volume of 6.3 million shares of AgriBioTech’s stock were traded on the basis of some negative comments about the company posted on a Yahoo! message board. After trading at around $9.25 a share in February 1999, the stock fell to as low as $1.40 per share in January. Trading was halted at $2.25 per share on Jan. 24, 2000 by Nasdaq, pending the announcement of the company’s intention to file for bankruptcy.

**BUSINESS AS USUAL**

AgriBioTech intends to conduct business as usual during the restructuring. To ensure that it has the short-term working capital needed to operate, the company is negotiating for debtor-in-possession financing from its current lending group, led by Bank of America N.A. The company intends to pay employee salary, wages and benefits throughout the reorganization process.

**New 2, 4-D study refutes original’s findings concerning cancer in dogs**

SWANBORO, NC - A study published in 1991 by the Journal of the National Cancer Institute showed an association between cancer in dogs and use of the herbicide 2, 4-D, but a recent re-analysis of that study does not support the conclusions found in that original study.

The new study, conducted by John B. Kaneene, D.V.M., M.P.H., Ph.D.; and RoseAnn Miller, B.S.; of Michigan State University’s College of Veterinary Medicine, did not find a dose-response relationship between numbers of 2, 4-D applications and canine malignant lymphoma (CML). That finding contradicted the original study findings that owners of dogs with CML were twice as likely to treat their lawns with 2, 4-D four times a year or more than owners of dogs without cancer.

The National Cancer Institute and antipesticide activists cite the original study as a reason why 2, 4-D should be banned, and some veterinarians advise that dog owners not use 2, 4-D. The 2, 4-D Task Force has sought a response to the original study ever since discovering there was no evidence in the toxicology of 2, 4-D that suggested it caused cancer in laboratory animals.
E*Garden launches Web site for Green Industry

RALEIGH, NC - An auction for surplus and rare merchandise and an upcoming wholesale store are just two of the many features of E*Garden (www.egarden.com), a new business-to-business e-commerce Web site focused on the lawn and garden industry.

E*Garden also features news, information and resources for companies in the lawn and garden trade. Longer-term plans call for the Web site to offer a full range of procurement, payment and distribution services for lawn and garden companies.

"Through E*Garden, manufacturers and distributors of lawn and garden merchandise can more efficiently and profitably sell their products," says Linda Watson, president of E*Garden, Inc. "Independent retailers and lawn and garden professionals can use E*Garden to buy all of their lawn and garden merchandise from a wide range of suppliers at competitive prices."

The auction allows sellers to post items in the Auction Service, where buyers can place bids on the items and e-mail questions to the seller. Sellers can see the best current bids at any time. When the auction period is over, E*Garden notifies the seller and winning bidder(s) via e-mail and puts them in touch with one another.

E*Garden is working to create financing and shipping partnerships, which will allow the transaction to be done through the site.

"Internet analysts expect business-to-business transactions on the Internet to grow to approximately $1.3 trillion by 2003 — dwarfing what consumers will spend online — and E*Garden is positioned to lead the lawn and garden industry's move into e-commerce."

Will the real number please stand up...

We did everything right in describing the Cushman Turf Truckster in our LM Product Review (September 1999) — except give you the correct phone number to call for more information.

That number is 888/922-TURF. We apologize for the error.
Its inspiration was the passion to build the best. Four years and four million pounds of pressure later, it's finally ready.

Introducing the 7-Iron™ mower deck from John Deere. Stamped from a single sheet of incredibly thick 7-gauge (.177 inch) steel, in the industry's largest press, its perfectly smooth and impossibly strong shell (shown to the left) has no welds to break, or irregular areas to catch clippings. A full-length front baffle eliminates any dead space and brushes grass into an ideal vertical position. An almost unimaginable depth (5.75 inches at maximum) creates a superior vacuum in which to cut. A multi-step electrostatic paint process (impressive for the automotive industry, let alone mowing) guards against rust. While features such as a rubber deflector shield and aluminum spindle hubs further prove its engineering excellence. (Rubber is more flexible than steel, and aluminum die casting more precise.) Available in 48-, 54-, and 60-inch widths, and only from your local John Deere dealer, the 7-Iron deck is simply the best in the world. To see for yourself, call 1-800-537-8233 or visit www.deere.com for a dealer near you.
Ferris-Simplicity merger spawns new product line

PORT WASHINGTON, WI — Simplicity Manufacturing Inc. purchased Ferris Industries, Munnsville, NY, only a couple months ago, but already the company has taken advantage of its newly formed association by coming out with a consumer line of commercial mowing equipment.

The new line is called Derby because of the mowers’ emphasis on speed. “This line is geared toward busy young professionals who want to cut grass fast with commercial-tough equipment,” says Jim Weir, president of Simplicity.

Simplicity, known for its dominance in the consumer mowing sector, acquired Ferris with an eye for expansion to the commercial side. “Ferris was a great fit because they are an innovative leader clearly ahead of their time,” Weir says. “We also think that they will help us strengthen our relationship with dealers.”

Simplicity and Ferris will continue to maintain their own individual Web sites which, unlike other sites, are designed to allow people to find the company’s dealers. Weir hinted at delving into selling equipment directly from the site, however. “We’re going to begin selling a limited amount of equipment on our Web site this spring, but we’re going to include the dealer in the process,” he says. “We’ll sell to customers but the dealers will set everything up and contact and interact with them.”

An addition to Simplicity’s plant is currently being built to meet the increased demand for its products, but Ferris will continue to stand by itself, says Weir. “Ferris is a vast, nimble and innovative company, and we want to keep it that way. The reason we acquired them is because they didn’t have the capital to support their growth.”

Weir says that Simplicity will eventually incorporate some of Ferris’ technology into its own machines, including the IS® independent suspension system. “Simplicity is known for offering the best cut, and that information will be translated to Ferris for a solid combination.”

—Jason Stahl

People & companies

The Toro Company named Dave Armentrout general manager of its recently acquired distributor, Chicago Turf and Irrigation.

Greenman-Pedersen named John Spiegel vice president and director of land development services.

Attachments manufacturer ATI Global, Delhi, IA, changed its name to Attachment Technologies, Inc. Attachment Technologies is the parent company of Bradco and The Major, providers of construction attachments.

The Toro Company featured

Van Waters & Rogers’ Professional Products & Services business unit as turf and landscape specialists.

Jerry Pauley and Lee Bloomcamp were named territory sales representatives for Zeneca Professional Products. The company also named Bill McClellan as its North American technical manager for professional pest control and turf products, Kathy Cantagallo as contract technical sales manager and David Ross as national accounts manager.

Roeland Kapsenberg was appointed by Barenbrug USA as its new president/CEO of Barenbrug North America. Ron Dodds was named territory manager for the company’s Forage product line.

Tom Taylor has rejoined Woods Equipment Company as marketing manager, Agriculture and Turf Business.

Rohm and Haas Company named Gray C. Wirth strategic market manager for turf and ornamental products.

David Mutter joined Environmental Industries of Calabasas, CA as vice president of sales and marketing. The company promoted William H. Arman to corporate vice president of human resources.

Harmony Products promoted John Moriarity to vice president of sales and marketing.

Sweepster of Dexter, MI named Patrick Robertson vice president of manufacturing.

Sumitomo Chemical, the parent company of Valent USA, purchased the Ag Specialties Business of Abbott Laboratories. The acquisition will provide Sumitomo with naturally occurring biopesticides, plant growth regulators and other products for agriculture, public health and forestry.
THE TALSTAR® MONEY-BACK GUARANTEE.

When you use Talstar® insecticides, we'll guarantee long-lasting performance against a broad spectrum of insects, or your money back. That’s because Talstar® insecticides have the longest proven residual in the industry, providing up to 6 months control of target pests.

The active ingredient, bifenthrin, is the only biphenyl pyrethroid available in the industry. And since bifenthrin contains no alpha-cyano group, Talstar® insecticides won’t cause the skin or throat irritation experienced with other pyrethroids.

Talstar® insecticides can solve your toughest insect problems. In and around buildings, on lawns and ornamentals, even on golf courses, Talstar® insecticides control a broad spectrum of insects and mites.

The water-based flowable and the granular formulations can both be safely applied to sensitive turf and ornamentals without damage or burning. Plus, they’re easy to handle and are odor-free at label rates.

Find out more about our new money-back guarantee for Talstar® GC Granular Insecticide, Talstar® GC Flowable Insecticide/Miticide, Talstar® PL Granular Insecticide and Talstar® Lawn & Tree Flowable Insecticide/Miticide.

Contact your FMC authorized distributor or call 1-800-321-1FMC.
**Church leaves TruGreen-LandCare**

**LOMBARD, IL** — Bruce Church, of TruGreen-LandCare (formerly D.R. Church Landscape Co.), announced that he is leaving the company to explore new opportunities.

Church, a founding member of LandCare USA, which was acquired by the TruGreen Division of ServiceMaster in 1998, will hand over his duties as district manager to John Joestgen. Church will remain TruGreen-LandCare as a consultant until March 3.

Circle 116
It's (not) in the hole!

ORLANDO, FL - Irrigation contractor Mark Dailey found himself doing his best Carl Spackler from Caddyshack imitation recently when he out-putted seven other finalists for a chance at becoming a millionaire at Irritrol Systems' $1 Million Putt Competition. Even though he wasn't able to say, "It's in the hole," on the 35-footer that would have put him in Bill Gates' company, he did walk away with $15,000.

Dailey's $1 million putt attempt marked the culmination of a year-long Irritrol promotion that was open to landscape and irrigation contractors nation-wide. Eight contractors were selected by random drawing to compete in the two-day putting event. In addition to receiving an all-expenses paid trip to Orlando, the eight finalists took home cash prizes ranging from $1,000 to $15,000.

Well managed, weed free landscaped areas are a soothing presence. Until they're invaded by unsightly weeds and encroaching grasses. Then they look more like work to the landscape manager.

Barrier® Landscaping Herbicide creates a weed barrier that guards woody ornamental landscaped beds, stone-escapes and organic or stone mulched walkways and beds. Not just from germinating weed seed, but from grass encroachment as well — all season.

And because Barrier offers both pre and post-emergent control, there is no need to remove previously germinated weed seedlings.

Let Barrier guard your landscape. So you can enjoy it.

- Pre and post-emergent activity
- Season long control
- Stays where you put it
- Low toxicity — caution label

www.landscapegroup.com / FEBRUARY 2000 / LANDSCAPE MANAGEMENT
Choosing 'designer' or 'generic' fertilizers

BY BOB STAIB

The price differences are obvious and they all deliver nitrogen, but there the similarities between fertilizers end. Each type, from basic to 'designer,' has features that may make your applications more effective.

The essence of fertilizer is nitrogen, and all types of fertilizers available to the landscape and grounds management industries offer nitrogen. What makes them distinctive is the nitrogen delivery mechanism, their cost and the way they can fit into your turf and landscape operations.

Back to basics
For the purpose of simplification, consider the four major categories of nitrogen fertilizers:

- soluble nitrogen (ammonium sulfate, urea)
- coated soluble N (sulfur coated urea, polymer coated urea, polymer coated sulfur coated urea)
- natural organic N (activated sewage sludge, digested sewage sludge, fish meal, dried blood meal, composted turkey manure)
- reacted (synthetic) organic N (ureaform, methyleneurea, liquid methyleneurea, isobutyli-denediurea)

These products range in price from very expensive to inexpensive; from soluble nitrogen levels of as little as 2% to as much as 46%; and from quick to slow release into the soil, among other characteristics.

Mode of release
By understanding the methods of release, you will know what separates the more engineered, 'high tech' fertilizers from the more basic varieties.

Bacteria known as nitrobacter and nitrosonomas (that occur abundantly in most plant supporting soils) rapidly convert ammoniacal nitrogen to the readily available nitrate (NO₃⁻) form that most plants prefer. Nitrate nitrogen moves freely in the soil solution and is subject to leaching and runoff.

When nitrate N accumulates faster than plants can take it up, two things happen:

TABLE 1. MAJOR FERTILIZER PRODUCTS (NITROGEN AVAILABILITY)

<table>
<thead>

<td>dried blood meal (12% N)</td>
<td>isobutyli-denediurea (31% N)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>composted turkey manure (10% N)</td>
<td></td>
</tr>
</tbody>
</table>
1. Vegetative growth becomes rapid, lank and lush; and

2. Under irrigation or rainfall, some of the nitrate N moves beyond the root system to go where the water goes. Soluble nitrogen must be used judiciously to minimize this. Also, soluble N sources have a high salt index, giving a greater burn potential when contacting leaf surfaces. For these reasons, the standard industry recommendation for turfgrass has been to apply no more than 1 lb. of soluble N per 1,000 sq. ft. per month of growing season.

What urea does

Urea is the soluble N source most commonly used in our industry. The enzyme (urease) exists universally in soil on plant tissue and organic matter. Urease quickly converts urea to carbon dioxide and ammonic nitrogen. In higher pH soils, volatile ammonia may be formed with a resultant loss to the atmosphere.

Because urea has a high N content and is generally the cheapest form of nitrogen in cost per pound, it is the most commonly used of the soluble N fertilizers. It is very reactive with chemical aldehydes, and thus is the raw N source for the slow-release synthetic organic fertilizers. The spherical urea prills lend themselves to uniform coatings of molten sulfur and/or semipermeable polymers. Each of these processes prevents the rapid accumulation of nitrate nitrogen described above.

Going natural

Natural organics were the first slow-release N sources. Before fertilizers were commercialized, natural organics were the only source of plant nutrients. Most all the nitrogen is released by soil microbes that use it for food and energy.

The limitations of natural organic fertilizers are their lower N content, the potential for contaminants of toxic metals and, with some, odor. Products commonly used in the green industry, however, are safe to handle and apply with minimal odor problems.

Coated products

Sulfur coated urea (SCU) is the lowest cost slow-release nitrogen product. This was first developed by the Tennessee Valley Authority in the late 1960s. There are now seven commercial manufacturers: LESCO Inc.; NU-GRO Corp.; Pursell Technologies; The Scotts Co.; Vicksburg Chemical Co.; Agrium Inc.; and Royster-Clark Inc.

Nitrogen is released by diffusion through pinholes and imperfections in the sulfur coating. The thinner the coating, the higher the N content, but the lesser the integrity of the surface. Straight SCU is more fragile than polymer coated materials because it is subject to degradation during handling.

<td>Susceptible to breaking/damage with handling</td>
<td></td>
</tr>
</tbody>
</table>

and application. A polymer coating adds durability.

**Polymer coatings**

Polymer coated urea improves the controlled release of nutrients into the soil. These coatings are significantly more reliable from the handling standpoint and, for this reason, are preferred by turf managers who want uniform growth.

They differ from SCU in that water slowly permeates the coating from outside. As the urea dissolves, it gradually permeates through tiny pores. The thickness of the coating governs the rate of N release.

When it's hot and humid, the coatings are more susceptible to degradation, which may adversely affect release rates. The cost of polymer coated urea compares to that of reacted synthetic organics.

**'High-tech' options**

Reacted synthetic organic fertilizers release N through hydrolysis or microbial activity, isobutylidenediurea, most popularly known under the tradename, IBDU®, from Lebanon Chemical Co., results from reacting urea with butylaldehyde.

In the presence of moisture, urea nitrogen is disassociated from the original compound by hydrolysis. The rate of release is inversely proportional to the size of the granule. The smaller the granule, the greater the surface area subject to hydrolysis. Fine granules will release N fairly rapidly in high moisture. The advantage of using IBDU on turf is that the release rate is not temperature sensitive and it has a very low burn potential. Fertilizer control officials classify 90% of the N in this product as water insoluble nitrogen (WIN).

Methyleneurea fertilizers release nitrogen by both hydrolysis and microbial activity. When urea is reacted with formaldehyde, methyleneurea polymers of decreasing solubility are produced.

Dry methyleneura fertilizer is approximately one-third WIN and two-thirds sparingly soluble nitrogen. It contains about 6% free urea. The urea and, to some degree, the shortest chain carbon-nitrogen linked polymers release nitrogen initially by hydrolysis. Then, soil microorganisms (the decomposers) use the remainder for both food (N) and energy (C), gradually releasing plant-available ammonic nitrogen back to the soil. Granular MU fertilizer releases nitrogen over 12 to 16 weeks.

Liquid methyleneurea fertilizer contains only the soluble MU polymers and more free urea. There is some controlled release, though, of much shorter duration than the granular 40% N material.

Ureaform provides longer lasting carbon and nitrogen for microbial activity. When urea is reacted with formaldehyde, the result is longer chained, less soluble carbon-nitrogen linked polymers.

Because urea is in excess in the reaction, there remains about 4% free urea. The finished product contains approximately one-third sparingly soluble nitrogen.

Step Inside
The New G-Series Cab

All-Around Visibility • All-New Instrumentation • Greater Comfort

EXPERIENCE
The Bobcat Advantage
The NEW Bobcat G-Series

cab and instrumentation—

Setting the standard for comfort, visibility and performance!

You asked for it and we delivered!

After surveys and interviews with customers worldwide, our revolutionary new cab and instrumentation are now a reality on Bobcat G-Series loader models. Check out these user-friendly features:

All-Around Visibility

G-Series cab design helps give the operator a super view in all directions.

- High-output halogen headlamps more than double illumination in your work area.
- Easily removable side, and top windows for convenient cleaning.
- Comfortable, fully-adjustable suspension seat adapts to the operator's weight and lets you work in comfort all day long.
- Rear pivot seat bar provides plenty of room for all sizes of operators. It's a secondary restraint and a comfortable armrest.
- 4 directional air vents allow operator to place the air flow where needed.

Greater Comfort

In the state-of-the-art G-Series cab, comfort begins with added room for the operator: more head room, leg room, elbow room — even belly room! Now "option up" with a full suspension seat, advanced hand controls, cab and heater with high visibility front door, air conditioning and more.

All-New Instrumentation

All switches are conveniently placed — easy to see, easy to reach. G-Series engineering truly puts control at your fingertips!

Left side instrument panel — standard on all models — includes switches for operating lights, optional bucket positioning, optional high-flow auxiliary hydraulics, dual function auxiliary hydraulics (instant on/off and variable flow), gauges for temperature and fuel level, plus hour meter and glow plug timer.

Right side standard instrument panel contains the key start switch and 14 diagnostic and monitoring indicators that keep track of major loader functions, including fuel level, glow plugs, system voltage, engine oil pressure, engine coolant temperature and hydraulic oil temperature. Catastrophic failure shutdown system available as a factory option.

Optional deluxe instrument package includes keyless start security system, function lockouts, clock and job clock, multilingual displays, "help" menu, catastrophic failure shutdown system, virtual bar gauges for key loader functions and engine diagnostic and monitoring. (See inside for more.)

Efficient cab heater allows all-weather operation. Temperature and fan speed controls are at eye level. Air conditioning is also available for some models.
The NEW G-Series state-of-the-art instrumentation provides dozens of operational features, diagnostics and monitoring functions. For example, this screen appears if the system troubleshooting screen appears. The deluxe panel provides a wealth of information, including a list of attachment troubleshooting and error condition data. High push the "question mark" icon for information. Follow the on-screen instructions for further information.

Optional enclosed cab features a new wiper/washer system. Optional cab heater is super-efficient for all-weather operation. Air conditioning is available for some loader models. Easy-to-remove top window (for cleaning). Dome light. Optional deluxe instrumentation package. (See operational features, diagnostics and monitoring functions below.)

Real time display. Great view of the tires for working close to walls and foundations. Job clock can be reset each time you start. Optional Advanced Hand Controls put precise control in the palm of your hand. Password-protected keyless start system. Large front door with 49% more glass area offers high visibility and allows easy entry and exit. Auxiliary control switches built into steering handles. Rear pivot seat bar accommodates larger operators with ease and doubles as a secondary restraint and convenient armrest.

Room With A View!
Check out these New G-Series loaders:

**751 G-Series Skid-Steer Loader**
The Bobcat 751 is the ideal machine for working in confined areas. It's not only compact and easy to maneuver, it delivers plenty of power and lift capacity as well.

**753 G-Series Skid-Steer Loader**
The 753's large tilt cylinder and rollback power mean improved digging and loading capability, and its tight turning radius lets you handle big jobs in small areas.

**763 G-Series Skid-Steer Loader**
The long-wheelbase 763 loader is a smooth-riding machine with plenty of traction and breakout force for excavating and handling large loads.

**773 G-Series Skid-Steer Loader**
Low-profile lift arms give super visibility to the sides, front and rear corners of the loader when loading, dumping and turning in tight quarters.

**863 G-Series Skid-Steer Loader**
More power to dig, lift and push. The 863 handles every task with strength, speed and smoothness.

**864 G-Series Compact Track Loader**
Rugged rubber tracks deliver the extra traction you need to keep working on rough terrain, soft ground — even in muddy conditions!

**873 G-Series Skid-Steer Loader**
Lift more. Work faster. Ride smoother. Everything's easier with the Bobcat® 873 Skid-Steer loader!

**864 G-Series Compact Track Loader**
When you need big power, big performance and big productivity, bring on the biggest Bobcat loader — the 963.
Choosing fertilizers

continued from page 38

gen. Initially, about one-third of the N is released in the first 4 to 6 weeks of growing season, while the remainder is released over the next 36 to 52 weeks. What is not used in one season carries over and will be available the next. Leaching and runoff of nitrogen is practically nonexistent.

Since microbial activity is temperature dependent, release of N from ureaform will begin when soil temperatures rise above 55° F and slow down when they exceed 90° F. The advantage of using ureaform is that it contributes to increased microbial activity in any soil capable of supporting plant life. It is particularly well suited for direct application in the root zone of turf, trees and plants following core cultivation or by injection of a liquid suspension of powdered UF in the soil.

Inhibiting effect

Nitrification inhibitors effect N availability and are known to provide more controlled availability of soluble N to plants (N-SerwEd by Dow AgroChemicals Inc. is one type that many professionals know). When the inhibitor reduces the population of nitrobacter and nitrosonomas bacteria, the conversion of ammonic nitrogen to the nitrate form is greatly diminished. Ammonic N does not move in the soil solution, and therefore will remain in place with only gradual conversion to nitrate.

Know your options

Managing for uniform growth will pay multiple dividends, not the least of which will be a more active root system. Stretching the budget to save on fertilizer is fruitless and wasteful if you have more mowing as a consequence. LM

The Labor Crunch:
Finding Good People

Finding and hiring people with potential might be Job 1, but it's easier said than done. This series will show you alternatives and ideas from many industry experts.
Demographics are against you, and they won’t improve anytime soon. The fact is, the United States birthrate has slowed enough to cause a real problem in the workforce. There are not, and will not be enough people to perform the work that economists project to be there in 2001, 2010 and beyond (some say for 30 years).

Add to that the difficulty of day-to-day landscape installation and maintenance work, the lowest unemployment rates in years, the high competition for employees across all industries and the lack of year-round positions in many landscape organizations — it’s a recipe for disaster.

Immigrant labor has relieved some of the pressures and new government H2B regulations make it easier to get legal employees (even then, it’s not cheap), but the fact remains that immigrant labor is only a partial solution. And most likely, the political pressures for the next few years will keep the United States from allowing huge masses of immigrants in to solve the problem.

As more ‘baby boomers’ opt for professional landscape services and as the economy continues to roll as predicted, your opportunities will grow. And as more people continue to retire early and job openings grow with the economic boom, your hiring opportunities will continue to shrink.

You’ve got a problem.

Want ads won’t do it anymore. Internet searches, industry recruiters and programs that bring professionalism to the industry help, but don’t solve the problem. The answer lies in working long-term to find new sources of employees, hiring and keeping them, providing satisfying and challenging career paths and responding to their needs for benefits and possibly alternative systems to get the work done.

These could include new work schedules, more company services or investment in additional labor-saving equipment.

Our series on labor solutions starts here and will continue in upcoming issues. This month, we look at the labor picture and give alternatives to traditional recruiting and hiring. We’ll follow-up with more ideas on training, building alliances, retention and improving your organization.
Rx for winning
in the service industry

Does it seem more difficult to find “good” people? Good people are everywhere — they just don’t want to work for us. Here’s how to get your recruiting act together.

BY BILL HOOPES

very day, experts analyze factors that impact success in our business and we develop business strategies with the same basic resource list. It doesn’t seem all that difficult until we encounter the most critical resource of all—the human resource.

Wanted: Effective people
No service business can realistically expect to reach objectives or maximize results without an effective people strategy. Service is demanded, designed and delivered by people. We see the failed efforts of good people again and again. And we are forced to conclude that, if the people plan flops, the business plan flops.

But are human resource problems that big of a deal? After all, everyone knows at least one manager who has survived some sort of horrific staff problem and gone on to succeed. Some do make it in spite of human resource problems but they never maximize results. In fact, a team cannot execute (or grow) nominally without a trained, effective staff.

So what’s the quick answer? (This is America, the information age — give it to me fast so I can get back to work!)

→ Developing a core of effective team players doesn’t happen overnight.
Johnson had no problem attracting football bodies, while appearing to be adequate, attracting the best people. Woody Hayes, themselves "I'm all staffed up" and cross labor budget! only do one thing predictably: drain your to be on our team...or so it would seem. Recruiting "the right stuff' is tougher. The problem is that they are classified section. "You must do more," I advised. "No time now," he shot back. "We're getting behind — gotta put the fires out!" Can you guess what happened next? He spread the same workload over fewer people and more quit. And so it goes. Year after year, managers repeat to themselves "I'm all staffed up" and cross their fingers, hoping their worst fears won't come true. The problem is that they are "staffed up" with the wrong people. Warm bodies, while appearing to be adequate, only do one thing predictably: drain your labor budget!

Like I said, "You have to do more than run the ad."

Recruiting doesn't come easy
Let's talk more about the difficulty of attracting the best people. Woody Hayes, "Bear" Bryant, Vince Lombardi and Jimmy Johnson had no problem attracting football players to their teams. But nobody wants to be on our team...or so it would seem. Recruiting "the right stuff" is tougher. Still, I've observed that for every prize (especially a prize considered worth having), there is a contender in pursuit. In that respect, the game is the same. What has changed is the public's perception of our industry. For me, that perception is part reality, part fiction. And because a job candidate's vision of a career in the service industry is cloudy at best, that is precisely where we need to go to work.

Let me restate a fundamental idea: our people problems in the service industry have nothing to do with an absence of "good" or "adequate" people. In fact, there are just as many good people around today as at any time in this country's labor history — maybe more. But they don't want our jobs! That is the single most distressing problem we face, but it's also our greatest opportunity.

In the past few years, why has the 18-to 25-year-old labor segment been "turned off" from our industry? Are you sure it's as simple as "nobody wants to work anymore?" I'm not sure of that, and I've seen enough to know I'm right about this.

Let's review some of the reasons younger workers do not want our jobs, or why they quit soon after they take those jobs. The key reasons include:

1. **Our industry has changed and our jobs have changed with it.** I recall the "glory days" of lawn care service:
   - four applications per year (not six to eight);
   - little or no aeration or seeding;
   - few bothersome customer calls;
   - not having to sell more and more — very little telemarketing;
   - practically anyone could hold a job in our business and do the work at a reasonable pace (in a reasonably pleasant work environment with business enough for all who wanted it).

2. **We've evolved.** Landscape and lawn care firms, once operating in a simpler world, now face more irritating and confusing regulation, some of which relate directly to our ability to be productive through people.

One example comes to mind. In some states, even if you are able to hire effectively, veteran employees are routinely given excessively high daily production goals (creating instant alienation), while the new hire proceeds through what can be weeks of

---

**Checklist for success**

Look at this typical industry manager's checklist for success:

- Business/personal objectives clarified
- Market niche (need) identified
- Mission statement on paper
- Business plan complete
- Marketing strategy set
- Capital
- Physical plant/equipment
- Vendors/suppliers
- Human resources necessary to execute — Houston, we've got a problem!

This planning sequence is typical. Most landscape and lawn care managers can work out a logical plan and have the best intentions, but it all seems to unravel when we get to the people part.

Is there a strategy in the world of Y2K that will help you succeed through people? Yes.

Is it quick, easy and manageable? And will it fit into my already overloaded day? No.

You have two choices: adapt to the realities of the 21st century labor market or continue to suffer frustrating failures.

— Bill Hoopes

LABOR FACT
1999 U.S. unemployment rate
Seasonally adjusted, in percent
Average: 4.25%
January through November

Editor's note: 4.0% unemployment is the traditional threshold for 'labor shortage.' Bureau of Labor Statistics does not keep unemployment data for the Green Industry; numbers are not broken down by detailed industry.

continued from page 51

required "training" before qualifying for the certification test. Fail the test and new hires face another month of waiting.

While all of this is going on, your best person quits. "It's just not worth it," he says on his way out the door. So regulations, needed or not, impact our workplace.

3. There is fierce competition at both ends of the competitive spectrum. New business entrants (sometimes former employees) offer extreme personal service at one end. At the other end, large conglomerates deal out lower prices made possible through economies of scale.

The result? Everyone is forced to work harder, offer better service and charge less. We are forced to demand productivity more than we ever have before, while insisting that our employees take time to do a better job.

In many cases, we are failing to do anything more than create turnover. While the few really large companies realize increased productivity through customer route density, the latest equipment and technology, most jobs in our industry have evolved into a succession of endless, pressure-packed days, few Saturdays off and an atmosphere far different than the one some enjoyed 20 years ago. Today, candidates that once gave us a close look now push the reject button and go elsewhere.

With the unprecedented 17-year economic expansion we are enjoying, high school, tech school and four-year graduates now have the largest variety of career options in history. Many candidates we were

If you thought tree pest control changed a lot in the past century - forget about the past millennium - YOU AIN'T SEEN NOTHING YET.

Tree pest control used to entail large spray rigs and drums and bags of pesticide. Trees can be protected with milliliters of systemic material, without drift, without runoff, and without applicator exposure.

That's the future ...

And you can be part of the future by attending one of Mauget's Micro-Injection Seminars going on this winter across the country. If you are already a certified Mauget applicator, you will learn about additional pests, diseases and tree health problems solved by micro-injection. Information on new products, expanded labels, and refined use of the micro-injection treatment system, all available in a one-day seminar.

Don't get hung up in the past

Start the new millennium with the future of tree health care, micro-injection by Mauget. We'll award you with a special Year 2000 certification.
What exactly is H2B?

By now the once obscure acronym "H2B" is well known in the Green Industry. But what is it exactly? It's a visa classification of the U.S. State Department.

The "H" is the category of the visa ("T" would be a NAFTA visa, for example); "2" refers to the educational level, in this case 'below college' or unskilled; and the "B" stands for 'business.' The last is one of two dozen categories — for example, you may also have heard of H2A, in which the 'A' stands for 'agriculture.' The categories are very specific, and the distinctions between them are hair-splitting. But for the Green Industry, H2B is almost always the applicable program.

H2A carries no numeric limits with it, but H2B caps at 66,000 workers yearly. Interestingly, the industry has yet to reach that 66,000 number, despite the labor needs. (Landscape Management has heard different quotes for 1999, ranging from 50,000 down to 32,000 workers.) The bureaucratic complexity of the H2B process probably accounts for that.

But if you can get past the red tape, perhaps with the help of a company specializing in H2B, you've got labor that definitely won't be sent back to Mexico if the Immigration and Naturalization Service pays your job site a visit. That's worth something!

— 'Labor Facts' are contributed by George Witterschein

continued from page 52

once able to attract and keep now see a limited opportunity with a lot more work and less leisure time than before. They simply opt out, partly because they can.

Attack the people problem

First, we need to attack the mistakes we made along the way. We can make great strides in improving our human relations status if we can correct four basic mistakes that are at the root of our troubles:

1. **Unclear message.** I implied that the public's perception of our industry as a career destination has become negative. Changing that perception starts with individual managers and operators.

2. **Poor recruiting.** For many reasons that are partly related to the image problem, we may be ineffective recruiters. That must change.

3. **Weak priorities.** Too often, we are consumed by putting out fires — failing to correctly prioritize our time and efforts. We can do better and spend our time better.

4. **Poor environment.** Finally, we don't maintain positive workplace environments for our people, and we must do that if we want to improve our lot.

Seed Aide® Mulching Granules for rapid turf establishment.

Seed Aide can be applied with a drop or broadcast spreader and by hand. Seed Aide's granular texture and unique physical properties allow for rapid water absorption. Our granules swell and as raindrops impact the swollen particle they flatten to better cover the soil surface. Seed Aide provides hydro-seeding performance without a large capital investment in equipment.

Jet-Spray™ Pourable Fiber Mulch Flakes for professional hydro-seeding results.

Jet-Spray with poly-fibres load fast in small tank openings. Designed specifically for jet-circulated hydraulic machines, our fiber mulch flakes pour into the tank reducing loading time by up to 90% versus baled fiber mulch. Poly-fibres enhance the water holding capacity of the slurry while improving the erosion control performance of the fiber mulch matrix.
Customize any tank mix to meet specific job site requirements by choosing from these soil and fiber amendments. Only Terra-Mulch has everything the specifier and professional contractor needs to plant it, tack it, dye it, lock it, grow it, lime it, seal it, gel it and spray it.

**Poly-Fibres:** A combination of 1/2 to 3/4 inch long polyester fibers, specially cut and treated to disperse rapidly in water. Poly-Fibres increase the mechanical bonding of all types of hydraulic mulch products.

**Tacking Agent III:** University tested and proven to reduce erosion and water runoff immediately after hydroseeding. No cure time required.

**Liquid Lime:** A super-high concentrate of the purest form of limestone. Quickly improves soil pH in the seed germination zone.

**Also Available:** Terra firm™ psyllium powder, Growth Stimulant, Locking Fibers, Co-Polymer Gel, Fibre-Tak, Seal, Dye Crystals.
Don't ask why, just do it!

When you become the industry's 'ambassador' in your area, you might discover that good employees will find you

BY PHIL FOGARTY

When I entered the lawn care industry in the early 1980s, the atmosphere was a little on the hostile side. For those of you who remember that era, it won't surprise you that in my first spring of ownership I was in two different city council chambers for hearings on lawn care. The day after one of the hearings, my company was on the front page of a local daily newspaper (we had the contract for that city's park system) with pictures showing picket signs held by little blond-haired boys: "Please don't make us the guinea pigs!" they pleaded.

At the time, I thought it was a dirty trick to play on the new entrepreneur. I barely knew how to calibrate a spreader and I had people with television cameras asking me for comments. I stammered and swore I would never be that ill-prepared for a chance meeting with the press again. Those dark days turned out to be a blessing in disguise. I reluctantly became an official representative, or ambassador, of my industry.

The political atmosphere has changed a bit but the advantage I gained by being thought of as the official representative of my industry in my market has not. Ambassadorship is representation of a group, but it can be so much more.

This ambassador thing is amazing because it does so much good for so many people. It is a true win-win-win situation. Your industry benefits from your efforts — that's good. But let's be a little more selfish here and also check out what it can do for your company and for you personally:

1. Industry image — Instead of allowing others to define your industry, you are out there promoting your profession. There are countless free opportunities to influence the public opinion. Is that important? Just ask Bill Gates, whose recent position in Gallup polls may have saved his skin (for now). Gates enjoys a 68% approval rating by consumers these days. He knows that presenting a positive image to the consumer will ultimately influence political opinion, which in turn decides much of the business climate in which he operates.

Okay, so political opinion may not be concrete enough for you. Wouldn't it be nice to be able to charge a little more for your expertise and time? Let's face it, John Q. Public doesn't think we are brain surgeons at this point. Our image is improving.

continued on page 58
How to get started

- Create a media database complete with community service leaders and other influential people. Include these people in all formal communications and marketing efforts throughout the year. If you don't have a newsletter, start one this month.
- Have a five- to 10-minute talk prepared. There is ambassador training through RISE and PLCAA, as well as videos available to help create a format with which you are comfortable. Become familiar with the issues surrounding our industry so you can be the person others look to as a spokesperson. Don’t hesitate to call another ambassador in another market for tips on how to structure your presentation. (PLCAA can help with names.)
- For good practice and experience with public speaking in general, become active in your local Toastmasters group.
- Practice on your staff, family and friends. Remember, selling is the transfer of enthusiasm from one individual to another.
- Attend and speak at every career day you can, especially at elementary and secondary schools.
- Make yourself available to radio stations and local print media. A simple letter introducing yourself and letting them know what you could offer in the way of tips for better landscape care or an article on a new way to improve a property may be all that is necessary. Offer to be a speaker at a local garden club or community service organization such as Rotary, Kiwanis or Lions. Leave the technical jargon at the office and talk enthusiastically about the emotional connection people have with your product or service.
- Consider teaching at a vocational or technical school in your area. Many community colleges are interested in industry experts as “visiting professors.”
- Take these one step at a time and be patient with the results. If possible, solicit the advice of a local public relations expert to get you started.

LABOR FACT

The going rate for landscape

- U.S. average hourly earnings in dollars Nov. 1998 through Nov. 1999
  Average: $13.18 (include preliminary figures for Oct. and Nov.)
  Average weekly earnings rose by 3.6%, seasonally adjusted, between November of 1998 and 1999. After adjustment for inflation, average weekly earnings grew by 0.9%. Before adjustment for seasonal change and deflation, average weekly earnings were $463.68 in November 1999, compared with $451.10 in 1998.

  Laborers, landscaping and groundskeeping
  Median hourly $8.24
  Median yearly $17,140
  (note: these are median figures; no average available)

LABOR CRUNCH

Continued from page 57

ing as our professionalism rises, but you can speed up the process exponentially by playing an active role and “selling” our trade and its benefits to everyone. Why isn’t everybody standing in line to be the ambassador? Don’t ask why!

2. Company positioning — So much of selling is trying to differentiate your company, service and product from the competition. “Industry representative” equals “industry expert” in the eyes of the public.
You and your company are now pre-sold as the best in your area. What an incredible advantage when the biggest clients in town are looking for the solution to a problem or an alternative to business as usual.
And how about the best employees? Who would they rather work for — a company that pays pretty well or the “industry expert?” (But you probably don’t need to hire anybody these days.) What a recruiting tool! Why isn’t everybody standing in line to be the ambassador? Don’t ask why!

3. Personal growth — “This ambassador stuff sounds like a stretch of the abilities. I didn’t sign up for any speeches when I decided to run this company — I just want to sell fertilizer, so leave me alone, will ya?”
In the world of selling, we know that what we are really selling is ourselves — every day, in every situation, all the time. By preparing yourself to sell your industry and your company (to a group or to the media), you move out of your comfort zone fast. I am still uncomfortable with public speaking but I do not know of a better way to compete with the big guys and their multimillion-dollar marketing budgets. And by the way, the “big” companies also train their managers as ambassadors.
With so many advantages and so much to gain, why don’t others assume the role? Don’t ask why! Maybe they have convinced themselves that it isn’t worth the time or the risk. It doesn’t matter.
You now know what an incredible tool being an ambassador is. And someone in your market is going to assume the ambassadorial role. As the wise man said, “If not you, then who and if not now, when?”
—The author owns Crowley’s Vegetation Management and serves as a consultant with JP Horizons Inc., Cleveland
In aeration, there are three ways to go.

Too fast.  Too slow.  Just right.

Knowing the difference could make all the difference in your job, not to mention your turf.

Sure, there are pull-type aerators that will run over your turf very fast. But like the hare in the fable, they won’t produce winning results. And, of course, there are those drill-type aerators where you have to be a little more cautious like our friend the tortoise, because you’re not quite sure of the result, how well it will work. What you’re really looking for is an aerator that will go just right.

Fitting your needs exactly with the correct piece of aeration equipment for your soil conditions is precisely why Verti-Drain® offers a dozen models, from a narrow width pedestrian to a wide-swath, high-production unit.

And all Verti-Drain models offer you the option of either solid tining or pulling cores. You might be surprised to find that solid tining is preferred often for severely compacted soils.

Many turf professionals have discovered our thinner tines called needle tines – the aeration holes are so small that you can hardly see them, yet you still get the patented Verti-Drain shattering effect under the surface.

With the heaving/shattering action, each tine is forced backwards underground, cracking the soil so air and water can move freely, strengthening roots and helping grasses resist pests, weeds, disease, drought and hard play.

So, the moral of the story is that there is a Verti-Drain® just right for you. Call today to contact one of our knowledgeable distributors to find out more details.

VERTI-DRAIN®
Redexim + Charterhouse
Breaking barriers to better turf.

950 Sathers Drive, Pittston Township, PA 18640
1-800-597-5664
Some products live up to standards. Others set them. When Bayer brought the chloronicotinyl class of chemistry to the turf market with MERIT® Insecticide, it revolutionized grub control. Six years later, MERIT provides longer soil residual and broader spectrum grub control than anyone else. And one application is still all it takes to control grubs through the fall.
Which makes MERIT the highest level of grub protection around. For more information, contact Bayer Corporation, Garden & Professional Care, Box 4913, Kansas City, MO 64120. (800) 842-8020. www.protect-your-turf.com
FFA seeks partners

In a tight labor market, one organization wants to supply the entire green industry with workers

BY FRANK H. ANDORKA JR./CONTRIBUTING EDITOR

The Green Industry is scrambling for employees, searching for new labor sources. Have no fear, the FFA is here. Future Farmers of America's membership includes 452,000 students who love to work outdoors. With consolidation putting the pinch on family farms, FFA says these kids are looking for alternatives to keep them working outdoors and offer them job security.

To that end, industry representatives huddled with FFA leaders last October to plan a curriculum for 10,000 high school teachers, promoting green industry careers.

"Most people in the Green Industry don't realize we already have moved the focus beyond the traditional animal husbandry disciplines," says Bernie Staller, COO. "We've already tailored some programs to address issues like urban forestry, biotechnology and landscape architecture. It's not just about animals anymore."

Training the trainers
Roscoe Vaughn, executive director of the National Council on Agricultural Education, says Western Kentucky University will unveil the curriculum on Oct. 31.

"We've talked about expanding the horizons of FFA for years, but this is the first time we've been able to do it," he says. "This is where FFA is going to grow, and right now our curriculum isn't as strong in the Green Industry as it is in other areas."

He hopes to have the curriculum established at 2,500 to 3,000 schools by 2001. Once the curriculum is complete, the council will bring teachers to Indianapolis to teach it. They will return to the field and educate their peers.

"We're setting up a 'training the trainers' program," Vaughn says. "We believe that will be the quickest way of getting our message out."

If FFA students realize other opportunities exist instead of focusing solely on farming, both the FFA and the Green Industry will benefit, Vaughn says.

"We'd like to offer these students something other than the family farm, and opening up other fields to our students is a way to do this," he adds. "If we can create a sense of excitement among our students, there's no telling where this might go."

Tap into this
How can you tap into this pool?

▶ Contact your local high school guidance counselors. They will allow you access to students who could be your future workforce. They will also help you network with local FFA teachers.

▶ Sponsor an FFA field day at your business. Bring students to your business and show them what you do. Experience is the quickest way to get these students excited about careers in the green industry.

▶ Volunteer to speak at a local FFA meeting or teach a class in an area where you need employees. It will relieve the pressure on FFA teachers and offer another point of contact with the students.

▶ Create an internship. Provide the FFA students with an opportunity to further their education and gain tangible work experience at the same time.

▶ Provide a scholarship. With a little investment on your part, FFA students will further their education with your help. Your company will be at the top of their minds when graduation comes around.
IT'S ONLY HUMAN NATURE
TO WANT THE BEST OF BOTH WORLDS.

Preventive or curative? Why not both?
MACH 2® is the only turf insecticide that gives you
the power to prevent or cure grub infestation. Apply in
mid-May to prevent grubs all season long. Or apply
immediately after egg hatch and grubs up to the
second instar stop feeding within hours after
ingestion, and die shortly after.

Plus, the innovative new chemistry behind
MACH 2 Turf Insecticide requires no immediate
irrigation, is virtually odorless and offers a
favorable environmental profile.

So, when it comes to MACH 2®, the best of both
worlds is clearly an understatement.

For more information, call 1-888-764-6432
ext. R2551, or visit our website at www.mach2.com

**GET YOUR FREE SAMPLE OF ROUNDUP PRODRY™**
INTRODUCING NEW

ROUNDUP PRODRY™ HERBICIDE.

It's finally here! New Roundup ProDry™—the weatherproof herbicide that delivers rainfastness in an hour. Now you can minimize weed control callbacks and increase your window of application. Plus, Roundup ProDry mixes in three minutes, turning into a solution that won't settle out. Easy to handle. Simple to measure. To keep your labor dollars working harder.

Wouldn't you like to try a new kind of dry?

Contact your local retailer and ask to see a trial demonstration of Roundup ProDry, or call 1-800-ROUNDUP for more information.
Irish legend says if you catch a leprechaun, he’ll tell you where he hid his pot of gold. Likewise, landscaping lore says that if you find a good mechanic, he’s worth his weight in gold.

BY CURT HARLER/CONTRIBUTING EDITOR

It’s a bear to find a good mechanic,” laments Virgil Russell, executive director of the Equipment and Engine Training Council (EETC), Austin, TX.

Dominic Morales, chairman of the golf/plant sciences department at Delhi College, Delhi, NY, says the biggest demand is on golf courses where equipment must be maintained on the spot and there is a large inventory of equipment with little outsourcing.

“We get 150 job offers for our 25 grads each year,” says John Piersol, chairman of the department of golf/landscape/forestry at Lake City Community College in Florida. “There is a bidding war on for a good tech.”

Indeed, some shop owners feel they have to have a pot of gold in hand before they go looking for a technician. That, of course, depends on a mix of knowledge and experience.

Jack of all trades?

“In a small shop, the mechanic is a jack-of-all-trades,” Morales says. “The larger the shop, the more likely the mechanic will be specialized.”

“If you hire a technician, they should be trained in 2-stroke, 4-stroke and diesel en-
The market seems to agree.

"You are depending on a person who must have multiple skills," Morales adds. Delhi offers both a one-year course for students and a one-week course for professionals, including a turf equipment management course in February. The one-year course is packed: this year there are 18 people in a class which is usually capped at 15 students. "Large, private golf courses need to have a person who is proficient in all aspects of mechanics, including electronics and hydraulics," he says. This applies equally to large landscape and grounds operations.

**Valuable certification**

Perhaps the most valuable certification is the Outdoor Power Equipment Technician Certification (OPE) offered by the Outdoor Power Equipment Institute. OPE certification is the industry's equivalent of the ASA (Automotive Service Association) certification for car mechanics.

In fact, John Kane, executive director of the Engine Service Association (ESA), Exton, PA (www.engineservice.com), says it is not rare for a technician to pass the 4-cycle part of the test and fail to be certified in the diesel area. In any case, certification lasts for only three years.

Specialty accreditation will become more common as companies like Kohler make certification a requirement for working on engines. Some equipment companies offer training as part of a sales package. Remember to figure in the cost of a mechanic's salary and benefits package.

"When they start, we tell students that wrench-tuners go for $7.50 or $8.50 an hour. Students who have good management skills make $12 to $16 an hour," Piersol says.

"You are depending on a person who must have multiple skills," Morales adds. Delhi offers both a one-year course for students and a one-week course for professionals, including a turf equipment management course in February. The one-year course is packed: this year there are 18 people in a class which is usually capped at 15 students. "Large, private golf courses need to have a person who is proficient in all aspects of mechanics, including electronics and hydraulics," he says. This applies equally to large landscape and grounds operations.

**Where's the real pot of gold?**

If your firm is in the market for a good maintenance technician, be prepared to shell out some big dollars.

Even for recent graduates with a good school record, pay is high. "These jobs pay $25,000 to $40,000 to start," says John R. Piersol, at Lake City Community College in Florida. "They have the potential to go to $50,000 or $70,000."

Other costs, like maintaining a parts inventory and the cost of space for the shop, need to be added to the mechanic's salary and benefits package.

In the past, most certified technicians came from servicing dealers. Today, that group is well salted with golf course workers and a scattering of landscapers, says ESA's Kane.

Golf courses seem more prepared to pay the price than the typical landscape outfit. In fact, the small operator and even the mid-sized company with several crews in the field is probably priced right out of the market when factors like maintaining inventory are added into the equation.

In short, it might be cheaper in the long run to leave a case of good beer or a dozen donuts with the dealer's mechanics now and then than it is for a small operator to try to hire a trained technician.

*continued on page 70*
When someone suggests you spend more money on a less effective preemergent, it's time to hold on to your wallet.
Field trials confirm that PENDULUM® consistently gives you more dependable, broad-spectrum weed control than any other preemergent herbicide. So, even when compared to premium-priced products, PENDULUM controls more weeds. You can take that to the bank.

For the PENDULUM herbicide distributor nearest you, call 1-800-545-9525, ext. T2611.

Unmatched value. Unbeatable performance.
THE LABOR CRUNCH

LABOR FACT

How landscape work compares
Weekly wages (average 1998)

Groundskeepers and gardeners, except farm $306
(closest BLS comes to weekly wages of landscaping laborers)
Brickmasons and stonemasons $573
Truck drivers $516
Drywall installers $493
Printing machine operators $495
Carpenters $490
Concrete and terrazzo finishers $483
Carpet installers $476
Roofers $441
Bus drivers $428
Operators, fabricators and laborers $415
Machine operators, assemblers and inspectors $406
Painters $402
Construction laborers $390
Woodworking machine operators $379
Sawing machine operators $366
Construction helpers $335
Janitors and cleaners $327
Textile, apparel and furnishings machine operators $293
Food preparation and service occupations $288
Farm workers $281

Editor's note: $306/week tends to roughly confirm a green industry wage of $7 an hour for laborers with a small amount of weekly overtime beyond 40 hours, as well as the BLS median hourly wage of $8.24 for landscaping laborers.

Our thanks to: Mike Wald, U.S. Bureau of Labor Statistics Regional Economist, Atlanta, GA

continued from page 67

necessary mechanical skills. Delhi and Lake City Community College offer a similar program to students. Delhi’s program will be three years old in the fall of 2000. At that time, it will be able to do OPE or specialty certification. At Lake City, Piersol wishes he had more students to fill the 15,000-sq.-ft. facility. He says one way to get more and better workers is for landscape industry leaders to get into the high schools and tell students about the high-paying opportunities for workers.

One strategy Piersol suggests is hiring people in high school and then offering them a paid internship as they complete their technical program. He says the auto courses are a good place to look for workers, as well. But, he maintains, the best way to get to the student is to talk to the teachers and guidance people at the high school and to parents whenever possible.

A shop that brings a couple of students in as part of a co-op program will have first pick of the better mechanics upon graduation. “You’re handpicking your future,” Piersol says.

EETC’s Web site, www.eetc.org, is a good place to start reviewing qualifications. Russell also suggests getting involved with a local vo-tech school. Right now, EETC has accredited 14 schools in its program and has 80 more pending. Accredited schools are authorized to teach either at the high school or the adult education level.

Kane says ESA may post a list of certified mechanics by region on its Web site to get trained people and employers together.

Don’t give up
Landscape contractors and grounds managers are going to have a tough time getting good mechanics. While an in-house mechanic is an accepted fixture on a golf course, many landscape managers blanche at the thought of shelling out $50,000 or more a year in salary and benefits. But that is what the mechanics’ market demands.

Russell says there is no hard-and-fast economic rule when changing over to in-house service. “If you’re using a dealer and getting good service, stay with the dealer,” he says. “If service is lousy, then look into going with your own technician.” In either case, he says, it is a good idea to make sure the worker is OPE certified.

When figuring the cost of repair service, be sure to include equipment downtime, Piersol reminds. If a contractor keeps an extra mower around just to use when others are in the shop, that’s a cost.

“Don’t take this out of context, but a 19-year-old student with an internship has just enough knowledge to be dangerous,” says Morales. “I’d prefer to place them as an assistant and let them move up. The perfect job is to put them in a shop where the chief mechanic will retire in 12 months or so.”

He notes that leasing equipment — doing preventive maintenance in-house but sending equipment back for major work — is another option.

Even if you elect to stick with dealer service, check to be sure the dealer’s mechanics are OPE certified. Look for specialty certificates that attest to the technician’s completion of factory-sponsored courses. The alternative is to sit out on the lawn after a rainstorm and hope to catch a leprechaun who can lead you to the golden mechanic.

If you've been shamefully lax about servicing your equipment, there are two ways to save face.

Your equipment and the condition you keep it in say a lot about you. That could be good. Or not so good, if you've been a little behind with scheduled maintenance. Or, if you've been using second-rate parts. Now there's a better way to save face. The John Deere RPM Parts Kit has everything you need for 500 hours of scheduled maintenance. Oil, filters, belts, blades, fluids and plugs. And the best part is, everything in the box is genuine John Deere. So it's easy to maintain your equipment's original quality and reliability.

Unless you've got a real thing for paper, let us suggest something in cardboard. Pick up an RPM Kit today. There's one tailored to every piece of John Deere commercial equipment you own. Call 1-800-537-8233 for the dealer nearest you. Or visit us online at www.deere.com.

NOTHING RUNS LIKE A DEERE®

Circle No. 129 on Reader Inquiry Card
Irrigation:

Looking to fill the 'trenches'

Irrigation's labor shortages are just beginning to develop. Future growth in irrigation business and pressure to conserve water will make it all the more important to hire good people

BY BRUCE F. SHANK/BIOCOM

The term "in the trenches" has a special meaning for the landscape irrigation industry. While irrigation seems simple, it is more complex than most occupations. Finding individuals who thrive on hydraulics and specific plant water needs and who aren't repulsed by getting down on their hands and knees in mud is a potential restriction on the growth of the industry.

Business growth, labor shortage

Irrigation contracting is growing at a double-digit pace and employees are needed to meet the demand. Conservation will play a major role in landscape management as population exceeds water supply. The price of water will take a quantum leap very soon, forcing us to choose between no landscape or efficient ones. The irrigation contractor will be the professional resolving the dispute.

The problem is not limited to the South and West. Labor shortages may be worse in the North and Northeast, especially in metropolitan areas where unemployment is low and the cost of living is high. These areas do not have equal access to the valuable labor provided by Mexican immigrants.

These immigrants are not just a source of labor; they have the potential to rise to foremen and designers and are most tolerant of "the trenches."

The Irrigation Association (IA) has estimated there are approximately 8,000 dedicated irrigation contractors in the U.S., along with nearly 30,000 landscape contractors installing irrigation. These contractors are performing more than $2 billion dollars in irrigation installation every year. This doesn't include golf courses, highways or parks.

Altogether, they employ roughly 150,000 installers and 40,000 construction foremen. The number of irrigation consultant/designers is approximately 6,000.

Put them altogether and you have 200,000 people depending on the landscape irrigation industry. At a market growth rate approaching 20%, another 40,000 irrigation specialists are needed every year without a loss of current workers.

Irrigation is, at the very minimum, a two-tiered occupation. While irrigation contractors often start out as one-person operations performing smaller residential jobs, they quickly evolve to handle design and installation. As the company enters com-
THE SEEDS OF A REVOLUTION ARE BEING SOWN.
In late 1998, leaders of the Green Industry got together with the GrowZone to create an online marketplace that would help grow our businesses and enhance our profits. This was in clear opposition to Internet outsiders who had plans to go around existing retail channels, reducing total profit margins and threatening the very way we do business. To accomplish our goals, a team of experts was put together from both the Green Industry and the Internet community. The results of these efforts have paid off in two exciting new world class e-business solutions: GreenBuyer.com, a wholesale buying service and YourNursery.com, your own online retail garden center. Together, they form a total solution for the entire Green Industry.

**Exercise your right to extraordinary growth with GreenBuyer.com**

This service was specifically created to expand the marketing power of growers of plants and producers of garden accessories and supplies. Suddenly, growth and profit potential are not limited by geography or current contacts.
They're as big as the world itself. At the same time, retail buyers and landscape contractors can use GreenBuyer.com to comparison shop and find the best prices, as well as expand their inventories to attract more sales. And the best part is, it's all done with security, privacy, and at the same profit margins you're accustomed to.

Enjoy the freedom of your own website with YourNursery.com

With more and more garden related sites selling direct to the consumer, you need an Internet presence to compete. With YourNursery.com, you can have your own customized website without spending many months and thousands of dollars to build it. And, if you already have a website, YourNursery.com can enhance and expand its potential by providing consumers with online shopping and access to your entire inventory. In addition, with our unique new "landscape design tool", your customers can actually scan in a photo of their own house and create their own personalized landscape design. When they see more, they buy more. And that's the whole idea behind YourNursery.com.

To grow your business and protect your profits.
Declare your independence. Get started today.

We invite you to make a smart investment in your own future. Working together, we can create exciting new opportunities while controlling our own destiny. We can achieve extraordinary growth while protecting our privacy and enhancing our profits. Help us shape the future of the Green Industry from the ground up.

Green Industry Bill of Rights

You have the right to earn your full profit margin.
You have the right to control your own website.
You have the right to private and secure transactions.
You have the right to reach more customers.
You have the right to dramatically grow your business.

mercial installation, a third tier opens up with the construction foreman. Large firms create a fourth category differentiating between experienced installers and laborers.

The critical core of the market is the designer and the construction foreman. Both of these roles require education and experience. However, the bulk of the work is done by the installer and laborer.

The current labor shortage in pure numbers is primarily at the installer level. However, without trained and experienced construction foremen, the market is in gridlock. A construction foreman often serves as the designer on smaller jobs. He is the one who allows the owner or manager to concentrate on marketing.

It's more than an image problem
There is tremendous opportunity in irrigation, but not without solving major personnel problems. Some contractors report that they have a harder time keeping irrigation installers than landscape installers. They do special things for their irrigation crews to keep them on board.

When contractors need to hire irrigation foremen and installers, they often poach other companies' trained employees. One firm with a three-year training program for foremen discovered that competitors were paying double to steal their trained employees! Attempts to draw irrigation specialists through classified ads turn up disenchanted workers or people with no experience. There simply aren't enough trained installers available.

The problem is so severe that The Brickman Group, one of the top companies in the industry, now subcontracts its irrigation installation. Illinois laws view irrigation as plumbing, and public health officials and state legislators in Illinois have linked irrigation to public health, placing licensed (call them union) plumbers in charge of the state's public water supply. Union wages make the labor shortage in irrigation a virtually unsolvable problem.

DiSanto Co., one of the oldest landscape companies in northern Ohio, is looking outside of its region because local classified ads have stopped producing qualified candidates. Matthew Matisko, a DiSanto landscape architect, says turnover is far worse than landscape installation. Winter layoffs continue to present problems.

Water Works Irrigation, a successful installer of residential irrigation systems in Cape Cod, MA, finds other work during the winter for its loyal crew members.

"The demand for our services is strong because Cape Cod has become a destination for vacationing and retirees," adds Paul Merlesena, owner. "The only thing that keeps me from growing is the lack of qualified help. My guys know how much they mean to me. They are going with us to the Caribbean on a supplier reward trip because they made it happen!"

Are certification & licensing all wet?
When the labor source is insufficient, does licensing and certification really help, or complicate matters further? In fact, licensing and certification identify the industry's more career-oriented people. They require a commitment to learning and reveal those who are unskilled and only in irrigation for the short term. They provide a rationale to increase wages because they insure value.

While only a handful of states have licensing programs, any irrigation contractor can use IA programs to groom foremen and designers. IA's 20+ different classes can be presented to groups across the country for training and certification. More than 700 people took advantage of training sessions at the recent IA Show in Orlando.

Community colleges are waking up to the need. The first IA student chapter was formed in November by the students of Lake City Community College in Lake City, FL. Cuyamaca College in San Diego recently opened a $5 million water conservation garden to complement its landscape irrigation efforts.

Does this tell you there is a respect for irrigation knowledge?

The growth of irrigation will be huge. The population will go in one direction only and water consumption will go with it. Water rationing, whether by price or quantity, is just around the corner for much of the world. Irrigation must be part of the solution, not the problem. But that can only happen if we have knowledgeable professionals in the trenches. LM

— The author owns BioCOM horticultural communications company in Palmdale, CA.
For more information on irrigation and training programs, contact the IA at (703) 573-3551 or www.irrigation.org.
If you really want to keep something

It takes two fierce herbicides acting side by side to keep crabgrass, goosegrass, spurge, oxalis and other weeds from breaking into your customers' property. Team Pro preemergence herbicide combines Balan* and Treflan* herbicides into the most consistent, fast-acting, long-lasting crabgrass preventer available. Team Pro protects lawns better than pendimethalin without severe staining of spreaders, shoes or landscaping.
out of a yard, unleash the Power of Two.

And Team Pro won't harm established ornamentals, turfgrass or your reputation for a good value. For information on fertilizers formulated with Team Pro, talk to your supplier. Leisure World

The 1999 Grand Award Winner of the Professional Grounds Management Society for Planned Community

Visitors to Leisure World of Maryland know they aren't in Kansas any more when they're greeted by a steel cage replica of the Earth tilted on its axis at the entranceway. But the empty steel ball pales in comparison to the 800 acres of landscape heaven inside this community of more than 8,000 senior citizens.

One of the original, planned senior citizen towns developed on the East Coast in the mid-1960s, its 22 separate communities provide a challenge to the on-site contractor, The Brickman Group, Ltd. Project director Brad Johns and his crew have to respect the tastes and priorities of each member of the Board of Directors regarding horticultural practices and individualized landscape installations.

The grounds maintenance crew handles turf management, four flower rotations, shrubbery and tree care, and 24-hour responsibility for snow removal and emergency tree removal. In addition to more than 20 crew members and three graduate horticulturists, the community has a contract administrator who acts as a liaison between the property owners and contractor.

After determining schedules for more than 150 acres of turf mowing, months of leaf removal, composting of a densely wooded site and snow removal for more than 55 miles of streets, curbs and walkways, this is one tired crew.

Editors' note: Landscape Management is the exclusive sponsor of the Green Star Professional Grounds Management Awards for outstanding management of residential, commercial and institutional landscapes. The 2000 winners will be named at the annual meeting of the Professional Grounds Management Society in November. For more information on the 2000 Awards, contact PGMS at 120 Cockeysville Road, Suite 104, Hunt Valley, MD; 410/584-9754. Web-site: www.pgms.org

(top left) High rise portions of the community vie for recognition for the showiest seasonal color.

(top right) A newly installed nature garden offers an attraction to butterflies and any visiting grandchildren.

The famous globe at Leisure World marks the main highway entrance to the community and is expected to be dramatic in its floral arrangement.
blazing a Trail

These trailers leave tow-behinds in the stone age

BY CURT HARLER/CONTRIBUTING EDITOR

The days of trailers as nothing more than extended pick-up beds are behind us.

Today’s landscape operations demand more of trailers than just a solid bed. Security — both for workers and for equipment — are key buying criteria.

As landscaping becomes a hotter specialty market, more companies are designing trailers with custom features for landscapers. These features range from special holders for edgers or mowers to nifty lock-down systems that assure that the equipment will still be behind the truck when your crew gets out of the back yard.

Many trailers offer special leveling mechanisms. These mechanisms make the trailers safer to use while allowing easier access onto and off the trailer for heavy equipment like riding mowers.

Check out the products below. There is sure to be something to add to your spring budget.

BIL-JAX, INC.  
800/527-5333  
www.biljax.com

Haul up to 5,000-lbs. of trenchers, lifts, compactors, lawn mowers and more in the new Workforce Escalate equipment trailer from Bil-Jax, Archbold, OH. Designed for safe, simple operation, the trailer’s entire bed lowers to the ground, eliminating the need to tilt it. Ramp grade is only six degrees, allowing equipment with low ground clearance to be driven onto the trailer easily. Unit features tie-downs, heavy-duty powder coat finish and a low center of gravity for easy towing.

Circle #264

CURB-KING  
800/937-2872  
www.curb-king.com

Haul 4- to 20-ton loads in the Workforce Escalate equipment trailer.

QUICK TIPS

► Low-rise trailers are great for loading but not so hot where ground clearance is required.

► Look for easy tie-down locations.

► Check hitches for both strength and compatibility.

► Have new employees practice backing up in an open lot before sending them out on the road.

► Check for leveling features — level trailers are safer.
this specially designed trailer from the Curb-King division of Tool Engineering & Manufacturing, Brigham City, UT. Heavy duty fenders double as walkways, and cut-away ends on the trailer provide easy loading into wheelbarrows without spillage. Circle #265

DEANDE
609/771-0001
The 3500-L from Deande, Tren-ton, NJ comes in two models with a 12-ft. or 14-ft. bed. Unit is equipped with pressure-treated floor, tie off loops and rides on a Dexter 3500-lb., 4-in. drop axle. Also available is the SS7500, a 4-ton skid steer trailer with a 12-ft. bed, swing-down ramps, and 14-gauge diamond plate fenders. Includes drop-down stabilizer jacks. Circle #266

JOHN DEERE
919/850-0123
www.deere.com
John Deere 22 Utility Trailer is compatible with the Gator utility vehicle, the 1800 utility vehicle or any larger model lawn and garden tractor. From Deere Commercial Equipment, Raleigh, NC, it features low profile and turf tires for easy travel on any kind of turf. Circle #267

E-Z DUMPER PRODUCTS
888-DUMPERS
ezdumper@cvn.net
The low-profile 6812LP dump trailer from E-Z Dumper, Waynesboro, PA has full hydraulics, 10-gauge reinforced floor and two-way tailgate giving access to the 9990 GVW bed. Adjustable coupler gives a level ride on any truck. Circle #268

GREEN TOUCH INDUSTRIES
800/621-6919
There's no need to risk coming back to your landscaping truck only to find someone has swept your tools. Green Touch, Jupiter, FL. offers individually lockable, coated steel Ultimate Racks and accessories for most pickup trucks. Circle #269

LIFETIME PRODUCTS
800/369-5365
The elevating platform trailer from Lift-A-Load, Kewanee, IL raises from the ground to 52 in. high while staying level. It will stop at any height for quick, convenient material transfer to trucks, ramps or ground level. Drop the trailer down to pass through low garage doors. Unit comes in either straight tongue or gooseneck hitch and in load capacities of 4,000-15,000 lbs. Circle #270

OXLITE MANUFACTURING
800/256-2408
www.oxlite.com
Make easy work of loading mowers onto a pickup with the 98 and 98-C ramps from Oxlite, Henderson, LA. Easy to handle at only 21 lbs. per runner, the units have a 1000-lb. capacity. The 98-C is a hinged version of the 98. Other ramps are available with capacities of 3,000, 5,000, 7,000 and 10,000 lbs. Circle #271

POWER TRAC INC.

All in a Day’s Work

Try Something New! Discover Ramrod Mini-Skid Loaders to increase the productivity of all your jobs. Ramrod Equipment has special packages specifically designed for landscaping, irrigation, fencing, small contracting, and light construction industries.
Dying holly plants
What would cause twig dieback and blackish leaves on holly plants? The black discoloration is also found on twigs. Some branches have small, raised bumps — probably related to some fungus. What are these and how do we manage?
— MARYLAND

Twig dieback and discoloration on hollies may be caused by several fungi, such as Phytophthora sp., canker-causing fungi like Phomopsis sp., or Gloeosporium sp.

If the dieback is caused by Phytophthora sp., you should not see any fruiting bodies of the fungus on branches. The "raised bumps" are most likely the fruiting bodies of a canker-causing fungi.

Based on the description you have provided, the problem is probably related to Phomopsis sp. It is also possible that a given plant may be infected by several different opportunistic fungal pathogens.

For positive diagnosis, send plant tissue samples to a diagnostic clinic. Based on the observations and recommendations, further action is needed.

Once the disease is confirmed as DED, the severity of the disease as evidenced by dieback and flagging symptoms in the crown needs to be determined. If it is less than 5% crown dieback, there is a good chance to prevent disease spread by proper sanitation and possible therapeutic fungicide treatments. Sanitation includes scouting and selective removal of diseased branches 10 ft. below the discoloration in the xylem. In some situations, this may require the removal of large branches. This sanitation and removal of infected tissue works well, provided the disease starts within the crown by bark beetle feeding in the branch crotch areas. However, if the disease is transmitted and spread by root graft between a diseased tree and a healthy tree, the removal of infected branches may not be effective because the fungus is systemic, moving upward inside the plant xylem tissue.

Another option is to inject trees having 5% or less crown symptoms with Arbotect or Alamo fungicides. These fungicides can provide two- to three-year protection if done correctly. Reports also indicate that if systemic fungicides are in the plants, the treatment for bark beetles using insecticides may not be needed.

The healthy trees within 40 ft. of diseased trees should be protected from root graft transmission of pathogens by trenching to disrupt root grafts. In the past, Vapam fumigant treatment was used to disrupt root grafts, but it is no longer available for that purpose.

Valuable susceptible elms should be monitored periodically for the presence of DED. If the trees display more than 20% crown symptoms, it is difficult to protect them from DED. Ideally, the trees should be removed promptly to minimize disease spread to healthy trees. DED can be best managed by the proactive preventive approach. This includes periodic inspection of elms for flagging symptoms, prompt removal of infected plant parts, and, where feasible, fungicide treatments on a preventive basis once every three years. If the disease is detected, provide trenching as needed to prevent root grafts. Read and follow label specifications for best results.

Finding tree grates
Could you recommend a manufacturer of cast iron tree grates? A job requires them and I'm at a loss for a supplier.
— CALIFORNIA

Contact the following companies who reportedly make cast iron tree grates:
• Neenah Foundry, 800/423-8116
• M.H. Powell, 323/887-0037
• East Jordan Iron Works, 800/692-3549.
'Fantastic' display

The grounds at Missouri's Fantastic Caverns have to be immaculate. Otherwise, over 130,000 people visiting yearly would take the maintenance crew to task.

Rarely do grounds maintenance crew members get to say that 130,000 people see their work every year. But most grounds crews don't have ancient caverns running underneath their green space.

Doug Campbell, maintenance supervisor at Fantastic Caverns, does. The caverns lie beneath the rolling Ozark hills just north of Springfield, MO. Thousands come each year to ride the jeep-drawn trams on a one-mile, 50-min. tour of the caverns.

"The visitors base their feelings about the Caverns on their first impression," says Kirk Hansen, public relations director. "And that first impression is the condition of our grounds. They have to be immaculate."

While there are several miles of known passageways through the caverns, only about a mile is accessible by tram.

"That is a large part of what makes Fantastic Caverns so unique," Hansen says. "There are many beautiful caves in the United States, many of them right here in Missouri, but we are the only cave system in North America that is large enough to allow a riding tour. Not only is the riding tour less detrimental to the delicate balance of the cave ecosystem, but it also makes Fantastic Caverns accessible to people in wheelchairs and families with small children who aren't up to a lot of walking, lots of steps and steep climbs."

Maintenance supervisor Campbell says that a Grasshopper 720K mower has saved his crew time and helped them meet their lawn-cutting goals. "We used to mow literally 40 hours a week. We had one person who mowed the grass eight hours a day, every day, to keep the property looking the way it needs to. The Grasshopper mower lets us cut the whole property in a day and a half. That leaves a lot more time for equipment maintenance, remodeling and servicing the jeeps and trailers."

"Part of the look we are trying to achieve is a clean one," he adds. In the fall, he attaches the Quik-D-Tatch Vac® collection system to the mower to collect all the leaves.

As public relations director Hansen says, the aim of the grounds crew is to make Fantastic Caverns a vacation place. "That is why we are so meticulous in our groundskeeping. We want to make Fantastic Caverns the kind of place that we would want to visit on vacation. And being so close to Branson, we have to keep up with the professionalism and image that the attractions down there project. If we want people to make us part of their Missouri vacation, then we have to look as good as we possibly can. You don't get a second chance to make a first impression."

For more information about Fantastic Caverns contact Kirk Hansen at 417-833-2010.

LM
Finding a single, A-to-Z source for wholesale turf, wildflower and native grass seed begins and ends with Independent Seeds. While the name is new, our experience, quality and service are not. We’ve combined the vast expertise, products and resources of selected leading seed companies to become Independent Seeds, the global wholesale turf unit of AgriBioTech, Inc. For all your turf seed needs, look to Independent Seeds. Our turf group is rewriting the alphabet for customer-driven and NTEP-proven performance.
**Products**

**Tech Center**

**Tough backhoe loaders**
Komatsu introduces two new backhoe loaders that feature the company's Avance excavator technology with the HydrauMind system. These features allow the machine to react almost instantly to a specific operator control, providing greater smoothness and controllability. The WB140-2 is 16,600 lbs. and 86 hp with a maximum digging depth of 14 ft., 6 in. The WB150-2 is 17,394 lbs. and 98 hp with a maximum digging depth of 15 ft., 6 in. Other features include a closed center load sensing system, load independent flow dividers, two working modes and speed-up.

For more information contact Komatsu at 847/970-5891 / circle no. 250

**Elbow room**
The Gehl 35 Series skid loaders feature spacious cabs with three different control options. User convenience and efficiency are emphasized by the loaders' excellent accessibility, powerful hydraulics and All-Tach mounting system that provides for various attachments. SAE operating capacities of the four models range from 1,425 to 2,650 lbs.

For more information contact Gehl at 262/334-9461 / circle no. 251

**Spread the word**
Gandy's two sizes of broadcast spreaders in push and tractor-tow models have 50- and 100-lb. capacity hoppers supported by an epoxy-coated carriage with pneumatic tires. All of the models have molded nylon and stainless steel metering components and an enclosed gearbox. The broadcast metering system has flow direction closures on the hopper bottom to reduce flow to right or left.

For more information contact Gandy at 800/443-2476 or www.gandy.net / circle no. 252

**Uplifting experience**
Mertz says that its new Hinowa Tracklift™ is being hailed as the smallest, least expensive all-terrain/self-propelled mobile aerial lift in the world. With its retractable track system, the Tracklift can compress to a width of 30.7 in., enabling it to pass through doorways. Weighing in at 3,197 lbs., it's 34 ft. tall and can lift as much as 440 lbs. at 1.3 ft. per second. Its aerial platform measures 51x28x43 in.

For more information contact Mertz at 580/763-0085 or www.mertzok.com / circle no. 254

**Touch screen system controls**
J and J Truck Bodies and Trailers has integrated Action Trakker™ software into its DynaControl® Central Hydraulics System™. Available in J and J's line of snow and ice control equipment, the Action Trakker lets the driver control all auxiliary functions from within the cab. The Action Trakker also collects operational and incident data for communication and tracking purposes as well for the reduction of liability.

For more information contact J and J at 814/443-1691, ext. 355 or www.JJbodies.com / circle no. 253

**Customized blade length**
Fiskars' six in. Sliding Blade Pruning Saw™ has an adjustable blade which slides into the handle, allowing the blade length to be customized to the branch or angle being worked with. The sliding feature allows for compact and safe storage while the curved shape of the handle keeps the user's wrist in the right position.

For more information contact Fiskars at 800/500-4849 or www.fiskars.com / circle no. 256

**Ergonomically designed chain saw**
Solo's new top handle chain saw features a new ergonomic design with greater balance, easier starting and more stable operation during acceleration. Powered by a 2.2-cu. in. displacement engine, it features an antivibration system and easy-to-start primer system. It weighs less than 8 lbs., delivers a full 2.0 in horsepower and is equipped with a safety chain brake.

For more information contact Solo at 757/245-4228 / circle no. 257

For more information contact Simple Solutions at 877/546-9594 or www.simpleSS.com / circle no. 255

Software

Now they're speaking your language - Simple Solutions, that is. The company has added Transparent Language's TranscendRT to its operations software package, Service-Ware. Translation? A manager can type instructions in English and, with a click of a button, translate those instructions into Spanish or Portuguese. Simple Solutions says that TranscendRT is not only accurate but can customize libraries to allow customers to save terminology specific to their industry.

But Never Cut Corners
Bob-Cat® ZT Mowers...For Those Who Refuse To Settle For Second Best.

Looking for a zero-turn mower that's a cut above the rest? Put the meanest mower on the market to work for you. The Bob-Cat® ZT Series features the most versatile and dependable mowers ever built. The compact ZT 100 Series offers collection and side-discharge options. Or, for bigger jobs, step up to the high capacity ZT 200 Series. Any way you cut it, the ZT Series gives you everything you want at an affordable price.

Backed by a 3-year, no-crack deck warranty and a 2-year, no-fail spindle warranty*, the ZT Series delivers a professional cut for years to come. Turn to Bob-Cat for zero-turn performance and zero compromise. Call 1-888-922-TURF.

*Some restrictions apply to warranties. See your dealer for details.
Our New Starting Lineup Delivers All-Star Performance

When it's time to make the trade to a superior line of equipment, score some points with your crew with the all-new Bunton mowers. Completely re-engineered with enhanced operator controls, our latest lineup will make instant fans out of the most demanding users.

All five of our all-star performers are backed by a 3-year, no-crack deck, 2-year, no-fail spindle and 1-year power unit warranty. Our exclusive 3-2-1 Warranty ensures a long and productive career from any new Bunton you choose.

Ready to get the edge on the competition? Call 1-888-922-TURF and ask about the new Bunton line-up.

Tends to turf
Dakota’s new Turf Tender topdresser/spreader is designed to pull behind any utility vehicle or tractor. The standard machine is designed to operate with a vehicle that has a minimum hydraulic flow of 3.5 gpm. An optional 8 hp Honda motor with electric start powers the hydraulic system. Its hopper is built to hold more than .75 cu. yd. of materials and designed to fit loader buckets up to six ft. wide to reduce spilling and waste. The machine can spread any typical material used in landscapes.

For more information contact Dakota at 218/773-1946 or www.dakotapeat.com / circle no. 258

Versatile wheel loader
Caterpillar’s new wheel loader features a VersaLink Loader Linkage with a one-piece, fabricated box-section design. The standard model’s linkage features a hydraulic quick coupler for fast work tool changes, while a high lift VersaLink option adds 20-in. of dump height. Other features include a pilot-controlled loader hydraulic system with a low-effort joystick control and a turbocharged, six-cylinder, 114-hp diesel engine. Optional remote forward/neutral/reverse switch fits machines equipped with the joystick control.

For more information contact Caterpillar Inc., P.O. box 10097, Peoria, IL 61612-0097 / circle no. 259

Maintenance-free grate
Fiberglass Composite Structures’ Aqua Grate™ is made of pultruded fiberglass reinforced plastic and designed with a fine grit-top surface for slip resistance. For use in recreational and industrial marine applications, it is resistant to corrosion and UV. The 1/4-in. space between Aqua Grate’s bearing bars was designed to further reduce slips, and the grating’s 1 1/2-in. wide flange provides comfort to pedestrian traffic.

For more information contact Fiberglass at 972/250-1633 or www.fiberglass.com / circle no. 260

Chase those deer away
R.J. Advantage has added Relex-iT® to its line of benign wildlife control products, a repellant that keeps deer from grazing on flowers, decorative and ornamental plants, shrubs, confers and deciduous trees. The company claims Relex-iT, a taste and odor deterrent, can be effective for up to two weeks and won’t change the color, texture or appearance of plants.

For more information contact R.J. Advantage at 800/423-2473 / circle no. 261

Mulch-n-More
Spyker Spreaders says that its Mulch-N-More can spread PennMulch™ in one pass without bridging or clogging. And, in the push, pull or electric models, a removable spinner blade and optional calibration tray ensures accuracy for maximum cost efficiency.

For more information contact Spyker at 888/877-9537 / circle no. 262

Hungry for weeds
Weed Tiger’s trimmer lines eliminate the need to “tap and go” with a trimmer, the company says, because the line begins and remains at a fixed length and doesn’t need winding. Drill a hole near the existing grommet hole, insert the Weed Tiger from the outside and restart. The bright yellow color increases visibility.

For more information contact Weed Tiger at 804/636-9333 or circle no. 263

Tall grass mower
Bachtold Bros.’ 7001 weed and brush cutter has an optional 30-in. cutting head powered by an 8-hp engine that was made to deal with grass up to 6 in. tall. Nickel-plated, 20-in. wheels and a 9-to-1 chain reduction drive with positive traction assists the mower through tough terrain. It comes with a standard Briggs & Stratton 8-hp engine.

PUT CLASSIFIEDS TO WORK FOR YOU!
love turtles, fish, and frogs!
So much so that when my hobby outgrew my parents house I dug up the backyard to build a water garden. The ultimate fish tank I thought would be a thousand-gallon pond where my critters could live just like they would in nature. That simple concrete pond built in 1982 became my passion and sparked what would ultimately be a lifelong odyssey.

In 1991, my hobby became my profession with the launch of Aquascape Designs a residential and commercial water feature design/build firm.

Aquascape Designs still builds ponds, waterfalls, and streams so others too can enjoy the beauty of nature where they live and work. In fact building water features is the backbone of our business and acts as a continuous R & D department. Our focus however has expanded from just building water features though. Today we have a company wide mission of “Changing the Way the World Builds Ponds.” Far too many contractors experience frustrations constructing water features. Green water, leaks, over complicated filters and confusing pumps and plumbing have plagued water feature design and construction for years.

It doesn’t have to be that way! Water features can and should be the most profitable part of any landscape installation. In order to be successful with water features though we’ve found you need to keep it simple, work with nature instead of against her and follow a step-by-step plan. By following this approach we’ve been able to grow Aquascape Designs into the country’s largest water garden builder.

Now it’s your turn. If you’re interested, curious, or even skeptical on how water features can improve your bottom line sign up for our free information. With the video and or magazine you’ll learn about what other contractors across the country are doing to have success with water features and their business in general. You’ll see the tricks of the trade and get ideas on how to incorporate water features into your business. Best of all its all FREE! I never would have dreamed a hobby would become my profession. Maybe water features could become a profitable part of your business too!

Call us, fax us, or write to us to see how you too can prosper with water features; the fastest growing trend in the green industry today!

PlanetAir Aerator

New for 2000 with its patented planetary motion and unique coring tine design, relieves the hard pan effect. The 12 tines penetrate the earth to a depth of 4 inches with a span of 48 inches wide. The tractor’s forward speed determines hole spacing, making the PlanetAir highly productive with low PTO horsepower requirement. Cleanup is minimal due to its pulverizing capability.

AA-TACH, PV-II

The PV-II is the most cost effective Parking Lot Sweeper on the market today. Take a look at the advantages over a conventional truck mounted sweeper

• No need to purchase a dedicated truck
• The PV-II loads and unloads from YOUR truck in just minutes, allowing YOUR truck to perform other tasks, like pushing snow, etc.
• Due to the Poly design of the PV-II, there’s no need to replace expensive replacement parts due to rust and abrasion.
• Best of all is the PV-II’s low cost, which is thousands less than the nearest truck mounted units.

Call today for a free no hassle demonstration of the AA-Tach, PV-II.

LANDSCAPE MANAGEMENT February 2000 97
Grasses for the masses

It's official: According to an article in the Wall Street Journal, the Chinese are replacing hard-packed soil in their public parks with grass. Proof? Try four million lbs. of seed imported from the United States in 1999, up from 150,000 lbs. four years ago. Nixing dirt, grass proponents say, will cut down on pollution, especially in cities like Beijing where auto fumes, coal soot and dirt from construction sites choke the air. But those who are in line with the Communist notions of cleanliness say that grass breeds insects. Others, particularly martial artists who practice at the parks, say the grass is a layer between them and the earth and prohibits them from tapping into the earth's qi, or vital energy. It remains to be seen whether the Chinese can have their grass and cut it, too.

Thanks, Harvard!

Did you know that landscapers have Harvard University to thank for instilling professionalism in their field? That's right, it was over 100 years ago that Frederick Law Olmsted, Jr. inaugurated the first professional degree program in landscape architecture at Harvard. To mark the occasion, the university is presenting a wide array of lectures, exhibitions and conferences in 2000 that will trace the history of the program and the way it shaped a profession just emerging at the turn of the century. And you thought weed-whacking wasn't heady stuff.

Rain forest on wheels

Employees and guests of Rain Bird came together right before New Year's Day to complete the company's lush, colorful Rose Bowl Parade float on the theme, "Rain Forest Rendezvous." Gretchen Wagner, our western sales manager, enjoyed the opportunity to help build the float, which she recalls was "an amazing experience." Rain Bird's floats have won prizes three years running. This year, it won the President's Award.

Rocky delivers knockout punch to trees

MIAMI, FL — Sylvester Stallone agreed to replant 173 trees at least 20 feet tall and restore a rare native hardwood hammock, comprised of over 1,000 smaller trees and brush, on property he previously owned here. The price tag for the landscape material could approach $500,000.

Stallone — "Rocky" to millions of moviegoers — had the trees and brush removed from the property surrounding his former waterfront mansion sometime early in 1999. Trouble was, the property sits in the middle of an environmental preservation district.

"Mr. Stallone had no knowledge that the trees had been taken down. Someone on his staff removed the trees on his own," Sly's attorney Neal S. Litman, told the Miami Herald.

INSURANCE SPECIALISTS FOR THE HORTICULTURAL INDUSTRY™

Circle No. 101 on Reader Inquiry Card
Things that run hot don't run hot long.
They either cool down. Or shut down.

That's why John Deere builds a stay-cool advantage into every XT-Series Trimmer.

Our advantage — known as the M-Series engine — offers more cylinder-cooling fins than most competitors. Plus, a unique flywheel design that maximizes airflow and reduces heat buildup. That means more productivity and less downtime on the job.

These terrific little engines also have better power-to-weight ratios than most everything else out there. They're smoother-running with a vibration-isolated clutch housing. And easier starting with a rotary-valve carburetor.

If you work in heat that'll fry an egg inside the chicken, you'll appreciate something a little cooler. An M-Series-powered line trimmer by John Deere.

(We're cool with that.)
