Preventive or curative? Why not both?

MACH 2® is the only turf insecticide that gives you the power to prevent or cure grub infestation. Apply mid-May to prevent grubs all season long. Or apply immediately after egg hatch and grubs up to the second instar stop feeding within hours after ingestion, and die shortly after.

Plus, the innovative new chemistry behind MACH 2 Turf Insecticide requires no immediate irrigation, is virtually odorless and offers a favorable environmental profile.

So, when it comes to MACH 2®, the best of both worlds is clearly an understatement.

For Tough Turf Tasks.

For more than 30 years, Kubota has been building diesel powered equipment to handle tough turf and landscaping projects.

Kubota M-Series utility tractors, from 47-90 net engine HP, offer a user friendly design and an ergonomically engineered operator platform for comfort and ease of operation. These tractors are powered by quiet Kubota E-TVCS diesel engines. Cab models provide a zone of operator comfort and all weather protection.

The compact sized B21/L35 TLB's are designed to work in tight places and are easy to transport from one job site to the next with a 3/4 ton pick-up and trailer. Versatility is provided with Kubota's quick-attach backhoe, Category I, 3-point hitch and rear PTO.

Kubota Grand L-Ten Series from 30 to 46 net engine HP offer a variety of transmission choices - fully synchronized main and shuttle transmission (FST), clutchless glide shift transmission (GST) and the new "FeatherStep" HST.

The F60 front mowers increase a crew's productivity with ease of operation and precision cutting. The Auto Assist 4WD with dual-acting, over-running clutch system delivers turf saving traction, in forward and reverse.

When you have tough turf and landscaping jobs to get done, get Kubota.

Any way
the wind blows.

NEW, NO-DUST, LOWER-ODOR Orthene® Turf, Tree & Ornamental Spray 97 blows away any other turf insecticide.

New ORTHENE 97 controls more than 40 pests (far more than Chipco® Choice™).
ORTHENE 97 controls through both contact and local systemic activity (more than Talstar®). So ORTHENE 97 is one of the most COST-EFFECTIVE turf insecticides you can buy.

Best of all, its patented 97 PERCENT PELLET delivers genuine ORTHENE performance in a smooth-flowing formulation that improves handling convenience and measuring accuracy while it reduces odor and virtually eliminates dust.

Find out about new ORTHENE 97 from your distributor or through the Valent web site at www.valentpro.com.

Products That Work, From People Who Care™
It was a done deal

Excuse my naivety with the United States Environmental Protection Agency's pesticide reassessment process. I actually thought that when the Food Quality Protection Act was passed in 1996, the EPA and the specialty pesticides industry would sit down together and figure out how to reasonably estimate exposures of pesticides for children and adults. I thought that many professional users would step forward and tell the Agency just how valuable these chemical products are for landscape management.

Silly me, I thought that the reams and reams of test data and the millions of research dollars spent by the manufacturers to meet the EPA's product registration scrutiny would be taken seriously as a useful body of knowledge.

But the anti-pesticide activists within EPA had another idea, and it was to put their agenda forward without giving the industry's body of knowledge more than lip service. After all, this is a political world and the EPA is one of the more politically active and biased of our federal agencies.

It was clear early on that EPA's regulators had organophosphate products in their sights, and they haven't wavered since. This is their mission — to put organophosphates and other products out of everyone's reach — rather than to build a logical and scientifically valid definition of what's safe and what's not. They changed the rules in the middle of the game, making many of our products vulnerable.

Most of us want manufacturers to keep developing safer, more targeted and more effective products. And many of us really wanted to see realistic definitions of the safe exposure limits. But after EPA made up its own definitions and its own rules, the "reassessment" process seemed more like a done deal.

What surprised me was the lack of comment or debate from our side of the industry. I didn't hear many product users telling EPA these products are important. I didn't see many industry associations or leaders step up to the bat for this.

Maybe you think it will stop after a few products and you'll still have a variety to use in your control toolbox. I wonder about that, because I hear about several activist networks pushing not only for limitations on use, but also outright bans on pesticides around schools, public parks and even home lawns. These people are organized, determined and vocal.

I'm troubled when I see professionals point fingers at each other, saying, "I don't use that stuff - they're the ones who do." In reality, thousands of you in lawn care, landscaping and grounds management depend on these products.

I hope I'm not naive to think that someday we'll have a strong, united industry voice to present to government regulators, investors and the public. We sure could have used one recently. In this case, it would have made the EPA think twice before being so cavalier with the products that you use.

No reason to turn back now

The genie is out of the bottle and if we use her wisely we'll discover that she'll do wonderful things for us. Her name is biotechnology and she's tantalized us with small proofs that she can help feed the hungry and cure many of our illnesses.

This has lead us to investigate what else she can do for us, including developing grasses to better control erosion along our highways, beautify our lawns and reduce the amount of chemicals and water needed to keep the turf on our golf courses green and healthy.

Most of us are willing to give biotechnology a chance to work its magic, but only after we're sure that we can direct it.

Some people, however, don't think that it's possible to control this genie. They fear that engineering the genetic material of living organisms is inviting catastrophe. Others maintain that this technology isn't needed. Some of these people, acting upon these beliefs, commit foolish, destructive acts.

A senseless act
On the evening of June 4, a group calling itself the Anarchist Golfing Association (AGA) traveled a dark, back-country road to the Pure-Seed Testing turfgrass research facility near the farming community of Canby, OR. These people — it's not known how many — entered two greenhouses there and destroyed research on genetically modified creeping bentgrass along with collections of traditionally bred grasses. They also stomped and pulled turfgrasses from research plots outside of the greenhouses. These selections were being evaluated for their resistance to disease or their ability to grow using saline irrigation.

The AGA left other reminders of their attack, including slogans on the walls of the greenhouses and golf balls with symbols drawn upon them. The vandalism to the turfgrass plants caused the most distress to Pure-Seed Research though. The process of developing improved varieties requires incredible effort.

The raid's irony
What the AGA didn't know (or didn't want to know) when it trashed the seed company was that the research that it damaged was directed at developing turf varieties that require fewer pesticides, less water and grasses that can prosper on saline and waste water.

While the company was, in fact, working on genetically modified bentgrasses, that research was reportedly assessing the suitability and safeguards needed to grow these modified grasses in eastern Oregon. Pure-Seed Research uses traditional selection and breeding methods to develop its varieties.

What effect will the midnight raid have on the grass seed industry? Probably not a lot.

Plant breeders will continue to develop improved grasses through traditional means and through genetic manipulation.

The genie of biotechnology has awesome powers to serve us. We just have to make sure we know how to guide her.

Refusing a job because it’s not in your area of expertise is professional. It says that you’re an expert in what you normally do, but not in that particular task.

Know your boundaries

Recent magazine articles on the sale and consumption of smaller landscape maintenance firms by larger ones show that the trend is toward more efficient, larger and theoretically more profitable companies. But smaller companies must also develop strategies to focus on services suitable for them and how to keep customers from leaving for the big boys.

Your strategy must be clear and focused -- a defined set of services that determine the type of equipment, staffing, customer base and expertise you need for those tasks. One step we all should take is to ask: How far will we go to satisfy our customers with services we don’t normally provide and what are we qualified to do? These questions need to be asked before we get in over your head.

Above and beyond

There are two areas of consideration when considering offering "special" services, strategic and tactical. Here are several strategic questions we try to answer before we go any further on a job:

► Can we make it safe and profitable?
► Is it something we are qualified to do?
► Is this a one-time job or a new service we will regularly provide?
► How successful can the task be?
► What are the consequences of a problematic completion?
► What are the long-term affects to the customer?

Then, we look at the tactical, or practical, side of the job:

► Am I qualified to teach it to my employees?
► Do we have the necessary equipment?
► Are we willing to invest in new equipment if we don’t already have it?
► Will we rent equipment?
► Do we have the necessary licensing?
► Do we have the necessary insurance?

With these questions in mind, here are our options:

1. Do the job.
2. Hire a subcontractor.
3. Refuse the job.

Take on the job

Just recently, I ran into a manager of an established lawn maintenance firm with an excellent reputation for service. The company, located in southeastern Michigan, also prunes, weeds and mulches the properties of homeowners and commercial sites.

The owner told me that a long-time residential customer asked them to plant a row of Colorado spruces. You may already have guessed that this project was a disaster with long-lasting effects. Although a valuable customer asked for the installation, the manager refused at first, saying that it wasn’t the kind of work that he did any longer. He eventually made an exception because he didn’t want his customer looking for another contractor who could do the work (and perhaps take over what he had been doing for years).

Needless to say, the project was over budget, took too long and the trees died.

You may have acquired some experience performing a certain type of service, but do you know enough about it to be able to teach it to your staff? Those are two different standards. And your staff should understand more than the basics — your employees...
I’m your go-to guy.
I carry all your tools. And keep you in the green. I’m always on the job. And hardly ever rest.

I live for work.
When your business relies on the growing season, every day is a push for profit.
The GMC® classic Sierra® 3500 HD can take the heat. It offers a base payload capacity of up to 9,232 lbs and is available in three wheelbases. Plus, flat frame rails mounted close to the ground make for easier body installation.

Our choice of engines gives you power to burn. Both our standard 290 hp Vortec™ 7400 gas engine and available 6.5L turbo diesel with 195 hp keep your business moving forward. And our standard four-wheel antilock brakes help you maintain steering control even during adverse conditions.
The classic Sierra is relentless power and reliability at your command.

Bring me on the job.
Call GMC at 1-800-GMC-8782. Or visit www.gmcforwork.com.

Do one thing. Do it well."
should also know the safest, most efficient and most practical way to perform a task.

Insurance is invaluable. If anything can happen, it just might. Insurance companies may give you performance ratings. These numbers designate the type of services you provide. Some insurance policies are more

might pay more for the work because it makes it easier on them.

**Often it's best to sub out the job**

Now you have a problem because you have to figure out how that tree will come down, where it will land, how you will dispose of it, how you will clean up, if your

Often it's best to sub out the job

Well into an ongoing landscape job, the owners decided they wanted this large, damaged tree removed (above). How successful do you think this guy (inset) will be?

Well into an ongoing landscape job, the owners decided they wanted this large, damaged tree removed (above). How successful do you think this guy (inset) will be?

use a subcontractor you don’t know. Ask other customers whom they have used and take your time finding one who does the level of work you want.

I work a lot with deck, brick and tree contractors. I use two contractors for each category depending on the type of work and time schedule. This kind of subcontractor may be the way to go. You can provide the service without making sacrifices with potentially dangerous outcomes. Be aware, though, that subcontractors can just as easily ruin as well as strengthen a customer relationship with your firm.

**Turn it down**

Refusing a job is one of the more difficult aspects to contracting. One of the advantages of a smaller company is the ability to provide services at many different levels and be a one-stop shop for your customers. But after balancing a job’s requirements with your capabilities, refusing a job may be the best alternative.

In fact, refusing a job because it is not in your area of expertise is professional. It says that you are an expert in what you normally do, but not in that particular task. Customers, believe it or not, will respond better than you might have expected.

There are all sizes of companies out there. Many full-service contractors have been successful by providing convenient multiple services to their customers. But it must work both ways, for you and your customers.

Consider your boundaries and stay within those limits. It will ultimately make you, your staff and your customers much happier in the end.

— The author is president of Natural Landscape Design and Maintenance Inc., Keego Harbor, MI
When people do start thinking about retirement, they think it’s too late. But that’s not so. You can start your retirement plan any time and have success.

Plan for your future: It’s never too late to save

Retiring in style is virtually everyone’s dream. For most of us, unfortunately, we are least likely to plan for it when we’re young. And obviously, this is more difficult than dreaming because there are senior citizens who never achieve the goal of financial freedom.

One of the reasons seems to be that when people do start thinking about retirement, they also tend to think it’s too late. But that’s not so. You can start your retirement plan in your 20s, 30s, 40s, even your 50s, and have success. But remember that starting later does make it more difficult.

Where do you start?
There are a number of considerations when preparing to retire. Truthfully, it’s hard to decide how much money you need to retire. Much depends on your lifestyle. I like the idea (as a minimum) of having your house paid for in full and a million dollars in the bank. Then, if you don’t take more than one world cruise a year or blow a ton on the lottery, you’re probably going to be in good shape. Your dreams may be different.

Although $1 million may not be your goal, let’s look at what it takes (and how long) to amass that million if you’re able to invest it and gain a 13% return. (According to Ibbotson and Associates, that’s what the stock market as a whole has averaged over the past 25 years.)

$1 million equals:
$10,000 lump sum invested for nearly 40 years
$100 per month invested for 38 years

Compare that with what you have to do in a shorter time to reach your $1 million:
$294,590 lump sum invested for 10 years
$48,040 per year invested for 10 years

These are fairly big numbers for most people to generate. This also makes no allowances for taxes, and it assumes that you will make 13% per year — by no means a guarantee. In other words, it’s anything but an easy task for most of us. And the less time you have, the harder it is. Consequently, the sooner you start saving, the better.

Here is another example:
$2,000 per year invested at 10% grows to $100,000 in 18 years
$2,000 per year invested at 15% grows to $100,000 in 14 years

The point of all this is twofold:
The more you can invest and save now, the better
The higher your rate of return, the faster it will grow

Most of us can come up with $2,000 a year. And $100,000 is a heck of a lot better than nothing. Again, this assumes you’re going to do well on your choice of investments, but says nothing about how you’re going to achieve these lofty rates.

Investment help
It’s no longer difficult for the average investor to keep pace with the financial world and monitor his investments. If I had one place to go to get do-it-

continued on page 14
continued from page 13

Your self investment advice, it would be the Motley Fool on the Internet. One of their model portfolios, which is called the "Rulebreaker," turned $50,000 into over $800,000 in less than six years. No foolin'!

Can they do it again? Who knows, but they also explain how they do it, and you owe it to yourself to learn everything you can. The site has a "Fool School" full of incredible information and investments ranging from the very conservative to the flamboyant. They give you a sound approach for where to put your hard-earned dollars, not to mention how to monitor them.

Another factor most of us don't calculate is the effects of inflation. Nevertheless, even a low rate creates big effects over long periods of time. If you factor in our current reduced rate of 2% vs. a 100-year average of 3%, in 30 years, a $20,000 car will cost about $35,000! A $10 meal at a fast food restaurant will run about $17. (Retrospectively speaking, some of us may even remember when you could get a McDonald's hamburger for 15 cents).

Today's social security check would go a long way in yesterday's marketplace. Unfortunately, it's not likely to ever work that way.

Circle No. 140 on Reader Inquiry Card
WASHINGTON, D.C. — Landscape managers will no longer be able to apply the popular pesticide Dursban now that its manufacturer, Dow AgroSciences, has agreed with the Environmental Protection Agency (EPA) to voluntarily cancel most in and around the home uses of it in the U.S.

The EPA contends that Dursban, manufactured by Dow AgroSciences, poses a health risk to children because it could harm their brains and nervous systems. The contention is based on a study by Dow that found that chlorpyrifos, sold under the trade names Dursban and Lorsban, causes brain damage in fetal rats whose mothers were given the pesticide.

Despite the study, Bruce Miehle, general manager for Turf and Ornamental Products at Dow, insisted on chlorpyrifos’ safety. “Because of FQPA (Food Quality Protection Act),

Green Industry responds
Since the EPA’s announcement regarding Dursban, Tom Delaney, executive vice president of PLCAA, has fielded calls from concerned PLCAA members. "'Where landscape professionals may have more problems is with commercial accounts or in public areas like parks or recreation sites," Delaney said. "And there's a different relationship between the homeowner and a landscape company and the general public and a company. The homeowner has more trust and receives specific benefits from the company. But the general public has more questions and are more likely to say, 'I don't want it on my ballfield where my kids play.'"

Customers happen to be more educated than the general public," Delaney said.

They hear all kinds of stories about saccharin and everything and are less likely to put a lot of weight on a flash in the pan article in the news." Allen James, executive director of Responsible Industry for a Sound Environment (RISE), predicted a bleak future for other pesticides. "Compared to earlier decisions on other pesticides, it sets a track record and future ones will be treated the same," he said. "There's nothing to say they'll be more even-handed with other products. The process is broken, not the pesticide."

Debra Holder, executive director of ALCA, also voiced concerns about the future. "With Dow AgroSciences announcing their agreement with the EPA on changes in the use of insecticides containing chlorpyrifos, we recognize that there will be changes and recommend that our landscape contractor follow the guidelines outlined," Holder said. "However, we do have concerns that the Food Quality Protection Act of 1996 appears to be setting standards that are not necessarily accepted by the scientific community or other regulatory boards internationally."

Life after Dursban?
Now that the EPA has canceled Dursban, the question is, "is there life after chlorpyrifos?" The answer in many corners is, "Yes."

First, remember that you can use Dursban under its current label indefinitely, and the EPA stated in The Washington Post that "the compound (Dursban) poses no imminent threat to public health, and consequently won't order a recall of products containing it." But there are alternatives.

Tim Maniscalo, Leader, Government & Public Affairs Urban Pest Management for Dow AgroSciences, says that while they don't cover as broad a spectrum and usage as Dursban, Dow products Spinosad and Conserve are comparable alternatives. Pyrethroids such as Talstar, Astro, Scimitar and Deltagard help manage surface insects such as chinch bugs, billbugs and sod webworms. Mach 2, Merit and Flagship can handle white grubs and a number of other chewing pests.

As to whether Dow's production of Dursban alternatives will step up, Maniscalo said he was not sure. "Production will depend on demand," he said.

Maniscalo couldn't offer specifics on any new products being developed for the turf and ornamental market. "We have a continued, on-going research effort in the turf and ornamental area, and we will focus our research people on that," he said.

Pyrethroids such as Talstar, Astro, Scimitar and Deltagard help manage surface insects such as chinch bugs, billbugs and sod webworms. Mach 2, Merit and Flagship can handle white grubs and a number of other chewing pests.

"However, we do have concerns that the Food Quality Protection Act of 1996 appears to be setting standards that are not necessarily accepted by the scientific community or other regulatory boards internationally."
WE GUARANTEE TALSTAR® INSECTICIDES WORK.

{OF COURSE, THERE'S NO LIVING PROOF.}

THE TALSTAR® MONEY-BACK GUARANTEE.

When you use Talstar® insecticides, we’ll guarantee long-lasting performance against a broad spectrum of insects, or your money back. That’s because Talstar® insecticides have the longest proven residual in the industry, providing up to 6 months control of target pests. The active ingredient, bifenthrin, is the only biphenyl pyrethroid available in the industry. And since bifenthrin contains no alpha-cyano group, Talstar® insecticides won’t cause the skin or throat irritation experienced with other pyrethroids.

Talstar® insecticides can solve your toughest insect problems. In and around buildings, on lawns and ornamentals, even on golf courses, Talstar® insecticides control a broad spectrum of insects and mites.

The water-based flowable and the granular formulations can both be safely applied to sensitive turf and ornamentals without damage or burning. Plus, they’re easy to handle and are odor-free at label rates.

Find out more about our new money-back guarantee for Talstar® GC Granular Insecticide, Talstar® GC Flowable Insecticide/Miticide, Talstar® PL Granular Insecticide and Talstar® Lawn & Tree Flowable Insecticide/Miticide.*

Egarden joins with hardware co-ops
RALEIGH, NC — Egarden.com signed long-term strategic e-commerce agreements with Ace Hardware Corp., Do It Best Corp. and TruServe Corp. with the goal of establishing a strong initial base of buyers of lawn and garden products.

Textron unites E-Z-GO and Turf Care
AUGUSTA, GA — In a move aimed at strengthening its position in the golf, turf care and industrial markets, Textron consolidated management of E-Z-GO Textron and Textron Turf Care & Specialty Products into a single organization called Textron Golf and Turf. Textron will continue to offer golf cars, professional/commercial turf care equipment and utility vehicles under the Bob-Cat, Brouwer, Bunton, Cushman, E-Z-GO, Jacobsen, Ransomes, Ryan and Steiner brand names.

Shemin Nurseries buys Schumacher's
DANBURY, CT — Shemin Nurseries Inc. acquired Schumacher's Wholesale Nursery and Landscaping Supplies, South St. Paul, MN. Shemin, one of the nation's largest wholesale distributors of horticultural products and services, will now be operating 24 distribution centers in 12 different geographic markets.

Tyler opens Indy delivery operation
ELWOOD, IL — Tyler Enterprises opened a full-service 7,200-sq.-ft.

Andersons completes acquisition of Scotts' U.S. turf business
MAUMEE, OH — The Andersons, Inc. has completed its acquisition of The Scotts Company's U.S. Professional Turf business and can now focus on the process of implementation.

"We have a plan in some stage of implementation," said Rick Anderson, president of The Andersons, Inc. Processing Group. "Part of our management philosophy is to take the strength of what we acquired and our own inherent strengths and make them work well together to achieve a 1+1=3 phenomenon. Part of doing that well is putting a team together that is a combination of both and getting ideas from everyone involved."

The transaction included a long-term supply agreement under which Scotts will use its own manufacturing processes to produce value-added products for The Andersons. Specifically, the acquisition included ProTurf®, Contec™, PolyS® and other brand names, the distribution network, customer lists and all trademarks, patents, technologies and copyrights associated with the professional turf market. The transaction didn't include use of the Scotts® brand or any of Scotts' consumer, professional grass seed or professional horticultural businesses.

Weed Man ups the ante
Look for Weed Man to move into United States markets more quickly than planned, said company executives in an exclusive interview with Landscape Management. The Mississauga, Ontario-based lawn care franchise company, which is the largest in Canada, has restructured its original U.S. marketing plan and stepped up the pace, based on early and enthusiastic response.

According to Roger Mongeon, president of the U.S. subsidiary, "The initial interest was so great we started looking for the most efficient way to attack the United States market."

In response, Weed Man's U.S. company, Turf Holdings Inc., signed six sub-franchisors in key markets. Each of these will be responsible for high population or multi-state areas and will sell a number of local Weed Man franchises to lawn care operators, pest control operators and other interested parties.

Currently, the large sub-franchisor territories cover much of the Midwest and mid-Atlantic areas. For more information on Weed Man, contact Turf Holdings Inc. at 416/269-5754 or visit the Web-site at www.weed-man.com

Shaner appointed PGMS executive director
BALTIMORE, MD — The Professional Grounds Management Society (PGMS) recently named Thomas C. Shaner as its new executive director.

The PGMS also announced it has contracted with Joseph E. Shaner Co. (JES), of which Thomas Shaner is president, to provide full administrative and management services.

"Through the association management company approach, PGMS volunteer leaders will be able to spend most of their time focusing on the future for their society," Shaner said. "Operational details will be handled routinely from our offices. We are staffed so that PGMS services can be expanded and improved to meet the needs of the membership, now and in the future."
continued from page 16
the rules have changed,” Miehle said, “but
the safety of chlorpyrifos hasn’t. We ulti-
manately felt that we had to reach an agree-
ment with the EPA, but this does not
change our conviction in the safety of
chlorpyrifos for all labeled uses.”

Users speak up
The decision hits companies across the in-
dustry in a variety of ways. Some landscape
managers have stopped using Dursban, or
plan to now, despite the fact that they will
still be able to use it under its current label
indefinitely and find it on store shelves

“Our company made a position as of
Jan. 1 to suspend purchases of Dursban,
work off our existing inventory and phase
it out,” said Kirk Hurto, Ph.D., director of

"I quit using it (Dursban)
some time ago when
I saw this coming.”
— Michael Hornung, president,
Valley Green

technical services for TruGreen-Chem-
Lawn. “We had already brought down our
inventory level significantly in the past
with some development of alternative
products.”

Part of the company’s decision, Hurto
said, was not based on safety but rather the
fact that it was a public issue. “Right now,
when customers call, instead of putting our
branches in a position of dealing with anxiety
or clarifying information, we believe it’s
a lot easier to explain to customers that we
want to phase Dursban out,” Hurto said.
“It’s just so much easier to take a proactive
stance, and customers in our business are
looking for leadership and peace of mind.
It’s no longer a scientific issue than it is
public policy.”

“I quit using it some time ago when I
saw this coming,” says Michael Hornung,
president of Valley Green, a lawn care
firm in St. Cloud, MN.

But it’s not that simple for others who
have come to rely on the material’s broad
spectrum of control. “The loss of Dursban
is going to destroy us down here,” notes
Jerry Gaeta, partner in The Good Earth, a
full-service landscape contractor in Mt.
Pleasant, SC. “We use it for termite treat-
ments, fire ants, as a chemical in all potting
plants, for a number of things. I don’t
know what we’ll use in its place.”
— Jason Stahl

A division of Rexius Forest By-Products, Inc., Eugene, OR
warehouse and delivery operation in Indianapolis. The building will serve as a distribution center for Tyler's custom-blended fertilizer products and specialty chemicals.

Wright Mfg. moving to expand
GAITHERSBURG, MD — Wright Manufacturing, Inc., is moving its headquarters to a new building in Frederick, MD, 21 miles north of its present headquarters.

Milliken new distributor for Sybron
SALEM, VA — Milliken Turf Products, Spartanburg, SC, recently became Sybron Chemicals' newest distributor for global turf markets.

Echo expands Lake Zurich facility
LAKE ZURICH, IL — Echo Inc. is adding over 155,000 sq. ft. of office and distribution space to its Lake Zurich facility. This is the third expansion at the Lake Zurich facility since the original building was built in 1989.

IGP acquires Vandenburg
BOSTON, MA — International Garden Products (IGP), Boston, MA, acquired Vandenburg Bulb Co., Chester, NY. IGP is a grower-supplier of ornamental plants and horticultural specialty products to U.S. garden centers and retailers. Vandenburg is a processor of perennials and flower bulbs from Holland, the U.S. and other sources worldwide.

People & companies
Netafim USA began a facility expansion project that will add 20,000 square feet and new production lines to its existing facility. The project is Phase 2 of the company's expansion plans which have involved capital investments of close to $4 million.

Nature Safe hired Chuck Barber as regional sales manager for the mid-Atlantic and New England states and Ibsen Dow as regional sales manager for the western U.S.

Environmental Industries (EI), the parent company of Environmental Care (ECI), named Richard Sperber president of ECI. Sperber will also continue to serve as senior vice president and chief operating officer of EI.

Simplot Turf and Horticulture named Bill Whitacre president.

Bayer Corp. named Dan Carrothers head of marketing for the company's Garden & Professional Care unit. The company also named Phil McNally, Ph.D. field research and development representative for the western U.S. and Chuck Silcox, Ph.D. field research and development representative for the northeastern U.S.
State of the Industry 2000

By the Landscape Staff

www.landscapegroup.com / JULY 2000 / LANDSCAPE MANAGEMENT
Remember life before Dursban?
Before Dursban® insecticide, insect pests were, shall we say, a little out of control. Then Dursban came along and helped you get them under control. Low odor Dursban Pro has the power to protect turf and ornamentals from more than 280 insect species, all while providing long residual control. Simply put, when you apply Dursban Pro, insect pests are history.
John Wheeler can forecast his landscape maintenance contracts through the year's end, but it's the design/build side that is harder to forecast. The president of Wheeler Landscaping Inc. in Chagrin Falls, OH, has a variety of design/build jobs lined up now but wonders how long that trend will last, especially if the economy "cools" as the experts say it will.

"We've budgeted an increase in our design/build work this year, but most of the work comes not that far in advance. We had a record month in April but will it hold out?" he asks.

That's the question on many people's minds as they juggle two conflicting trends: managing today's strong demand and dealing with uncertain prospects about next year's business. Economists tell us that the Federal Reserve's six interest rate hikes, the stock market's volatility and some rising prices in certain sectors are starting to have that "cooling" effect. The question is, how much and how long will it last?

Certain economic trends seem to point to a slight slowdown, but what will that mean for the landscape and lawn care industry? Currently, few industry professionals see any signs of a slowdown.

"It's not here yet," says Neil Thelen, president of Landmark Landscapes in Norcross, GA. "Landscape normally is at the back end of a slowdown. We could see something in about 12 months."

The next year isn't looking bad for Mike McCoy, president of McCoy Landscape Services in Marion, OH, who says the strong economy has made business easy. He reports that most of his contracts came unsolicited, boosting the firm over its previous goals.

Right now, the problem isn't so much a slowdown as it is managing the incredible growth this industry has seen during the last nine years. The profile of the Green Industry in 2000 is one of untapped opportunities for more business, labor shortages that continue to plague landscape managers and a host of new issues, regulations and market developments that may make life even more interesting in the next few years.

Year in review:

Full steam ahead
Last year, landscape managers predicted an average of 15.5% growth for 1999. Our research this year (see "How we got this information," page 36) shows even more optimism, with expectations of a mean revenue increase of 18% for 2000.

Where are they getting this growth? Some landscapers and lawn care operators are expanding via franchises while others are opening up new branches, up-selling existing customers, finding new clients on the Internet and squeezing more profits through greater efficiencies.

Nevertheless, there are several factors that make life difficult today or hold the promise of having a major effect on tomorrow's business.

Down and dirty competition
Low-ball competition keeps maintenance prices (and profits) low, especially in the head-to-head residential markets. Few contractors voluntarily get into this price-war situation and several, in fact, are planning to boost their prices this year.

"We're shifting to a new pricing structure and are looking to grow continued on page 28
Every lawn and landscape has thousands of tiny time bombs hiding in the soil. Broadleaf weed seeds. And the best time to stop the explosion is before they emerge. A preemergent herbicide application creates a zone of protection where weeds get whacked as fast as they germinate. So your customers never see any weeds, and the turfgrass gets off to a fast, healthy start. It works so well, it can eliminate a lot of callbacks and
maybe two or three postemergence herbicide applications. One treatment of Gallery® preemergent herbicide is all it takes. Use it spring or fall on turf or ornamentals to prevent more than 95 kinds of broadleaf weeds for up to eight months. For more information, call us toll-free at 1-800-255-3726 or visit our web site at www.dowagro.com. Always read and follow label directions.

"It's very competitive out there," says Chris Karcher, owner of a new NaturaLawn franchise in Shawnee, KS. "A lot of companies want to compete by offering low prices, but they're doing a disservice to the industry. Our challenge right now is targeting customers who are convinced that lawn care isn't about who is cheapest."

Tom Davis, president of Bozzuto Landscaping in Laurel, MD, agrees: "Competition is stronger and pricing is still tight. Personally, I hope the low-ballers get acquired soon."

Gary Nichols, owner of Twin Oaks Landscaping Inc., in Fairfax, VA, rarely comes in as the low bidder. He expects his $300,000 firm to increase revenues as much as 15% this year, but not by low-balling on landscape design/build. He won't bid on such work because "that's on a low-ball situation. There's a totally different profit margin involved there," he adds.

Dwight Hughes, president of Dwight Hughes Nursery, Cedar Rapids, IA, expects more competition to continue. "New competition is a national issue. There is a new interest in horticulture and more people in the community college programs. They'll keep entering the business."

Don't expect the debate on low-balling to go away. Like Hornung, many feel that pricing plays a major role in setting industry standards for success and an appearance of professionalism.

"Everyone is so focused on saving money on payroll, yet they're not charging enough to do the work," he says. "Plumbers are getting $100 per hour and we're still getting $30 to $40. That's why we can't find the employees we want. When we're getting a customer on price and not on service, we suffer for it."

Inflation & the hunt for profitability

Like other industries, many landscape operations undoubtedly found higher profits by reaching new levels of productivity, rather than through increases in prices.

While our economy has enjoyed an unprecedented run of stable prices, some prices are creeping up — health care costs, gasoline, water and wages. And some operations are starting to feel the pinch.

"I'm feeling significant cost pressures, especially in the areas of insurance (mainly health care..."

The mergers in our marketplace have caused those firms to move on to the largest projects,” explains Larry E. Brinkley, president of BLT Landscape Services, Dallas, TX. “That’s left a void with the medium to small-sized jobs.” This has been advantageous for BLT, which concentrates on medium-sized commercial and high-end residential work. The shakeouts that are in-evitable when competitors merge are also proving beneficial for landscape managers looking for experienced managers. Several commented on their good fortune to hire experienced people from consolidating firms.

While the nearest consolidated firm is 100 miles away from Mike McCoy’s company in Marion, OH, they compete... continued on page 30
continued from page 29
in the same market — Columbus. Since he hasn’t gone head-to-head with the bigger firms on bid jobs, he has a rather charitable view of them. "It seems that consolidated companies are doing a great job," he says. "I think there will always be room for smaller companies, though."

Neil Thelen is waiting for the consolidated firms in Atlanta to make a serious play. “Our market is atypical — we have several top firms who have always been competitors, and now they’re working hard to figure it out," he says. "With that many firms, you’re going to have some confusion, but it will be a juggernaut when they eventually do figure it out.”

He’s watching closely. “It will be really interesting to see how this plays out. I think the consolidation will improve the professionalism of our business here in Atlanta, but everyone needs to be prepared for almost anything. You can’t have too many prima donnas on the dance floor.”

On the lawn care side, both Centex of Dallas and Weed Man of Mississauga, Ontario, are making active moves into the marketplace. Weed Man just announced revised plans to penetrate the United States lawn care market through a series of sub-franchise arrangements and has attracted several high-profile lawn care owners, while Centex is concentrating on acquisitions.

Supply chain changes
Supplier mergers and acquisitions are changing traditional distribution systems, the availability of certain products and many face-to-face relationships.

Just a few examples of the activity on the supplier side include: the BASF/American Cyanamid deal; the merger of Novartis and Zeneca into Syngenta; The Andersons’ and NuGro’s combined purchase of the professional turf business from The Scotts Co.; John Deere’s new emphasis on moving its dealers into after-sale services; Turfco’s direct sales program; Ferris Industries’ purchase by Simplicity; the launch of several e-commerce sites focusing on the landscape industry; and AgriBioTech’s bankruptcy.

All of these are expected to impact the normal buying and distribution systems, but time will tell if those impacts are positive or negative. Most likely, here’s what you’ll find:

- New names, new faces and new ways of buying. As suppliers merge or tweak existing distribution chains, some will cut staff, reassign territories or "streamline" the buying process.
- Less products and potential limitations on developmental research. Some crossover prod

10 trends impacting the industry

Whether the economy continues to expand or slow, these 10 trends won’t change. Here they are:

1. "Easy" growth – It’s not only fairly easy to grow an operation, it’s sometimes a real challenge to limit growth. Survey respondents named landscape design/installation the fastest growing segment, followed by maintenance.

2. Uncertainty about the future – Is the economy cooling? Will it affect construction, disposable income for consumers and commercial maintenance budgets? It’s hard to prepare for this.

3. Consolidators are getting it together – While the rate of consolidation has slowed, the consolidated companies are starting to standardize operations and bring on some real competition.

4. New, tougher competition – New competitors enter this market constantly, making competition tough and squeezing prices, particularly in the maintenance side of the business. This won’t stop.

5. Demanding customers – Blame it on instant messaging if you like, but today’s residential and commercial customers are much more fussy and pushy about getting “extras” in a deal. And they want it now!

6. Ouch! Lack of labor hurts – Labor shortages are a fact of life and there is no solution on the horizon. Some organizations make the most of the situation with good management, benefits and mechanization.

7. Regulations with bite – Key issues challenge landscapers around the country, including: availability and use of pesticides; blower noise and engine exhausts; ozone-alert restrictions; control of irrigation installation; and water restrictions.

8. Diversity in services and customers – Innovative contractors and LCOs are expanding into new areas, franchising new services and seeking employees from new sources.

9. Supply chain blues – Manufacturers are merging at a dizzying rate, the ABT seed consolidation’s fallout has yet to fall out and dealer/distributor chains continue to confuse and frustrate industry professionals. This will continue as long as mergers and acquisitions are profitable.

10. High-tech goes "green"– Laptops, palm devices, digital photography, new software and the Web continue to attract the attention of tech-savvy landscape managers. But how many are mechanizing for better productivity?

In-your-face regulations
Moves to regulate landscape operations at both local and national levels are becoming more visible and aggressive, especially in certain markets. Last month’s loss of Dursban is a prime example (see story on page 16). Massachusetts’s strict regulation of pesticide use on public properties is another major development.

The Dursban move was not a surprise; rather, it was the speed of the decision that hit the industry so hard. Several landscape managers say they saw it coming and made their plans accordingly.

Michael Kowelchuk, former owner of Gro-Control Inc., Westland, MI, stopped using it six years ago because of a state law requiring him to put a warning plaque on his truck. He’s spent enough time in the industry to know that pesticide regulation will ultimately affect business, despite the emergence of alternative products.

“People want results if they’re paying for a service,” he says. “They’re pretty impatient. If you can’t deliver because you don’t have the tools to do the job, your market will definitely be affected.”

Many landscapers are dealing with restrictions brought on by drought or overbuilding, and they have had to defend the use of water for landscaping.

“We’re down 20 inches below normal for the last 18 months and may be looking at severe restrictions or bans,” reports Neil Theilen. “Malta (Metro Atlanta Landscape and Turf Association) has been speaking up for water rights in our area.”

Larry Brinkley reports an informal coalition of landscape managers in the Dallas area has organized to discuss water issues and develop information for use in public debates. Thanks to the information, many of the restrictions were limited, he says. “They backed off on it.”

He also reports talk of restrictions on the use of backpacks, mowers, fork lifts and other equipment during Dallas’ many ozone alert days. “They’re talking about limiting use until after 10 a.m.,” he says, noting that those rules create new logistical problems for his managers.

Regulators in Illinois and Minnesota have been stepping up pressure to make sure that installation of irrigation lines is limited to plumbers or electricians. For someone like Michael Hornung, who has seen his irrigation business double in each of the past three years, Minnesota’s move is a threat. “This is going to hit me directly,” he says.

The controversy about blower noise continues to bedevil landscapers in some areas of the country, especially California.

Wayne Richards, COO of Cagwin & Dorward, Novato, CA, explains, “The banning of blower use in cities is a big concern. Even though suppliers and contractors actively try to educate the public about the value of blowers, this is a purely emotional issue spearheaded by residents who are not concerned about the economic impact resulting from the bans. The California Landscape Contractors’ Association is actively soliciting political support to arrive at compromises.”

“Government regulations on the H2B program have had a negative effect, with increases in the prevailing wage rates,” says Ronald Schmoyer, president of OneSource Landscape & Golf Services, Tampa, FL. He also cited EPA regulations and Florida restrictions on water use as serious issues.

'Spoiled' customers?
Aren’t you a more discriminating customer with your purchases these days? Maybe it’s logical to expect your clients, both residential and commercial, to be pickier. But how picky is okay? Some landscapers complained that unrealistic expectations, burdensome communication schedules and requests for “extras” are driving them crazy.

“My number one challenge is dealing with people,” says Dwight Hughes. “They want immediate communications. If you don’t call them back the same day they call, they’ll be calling you back again.”

It’s not an issue of customers as much as managing their expectations, Hughes explains. “I have the greatest cus-
"You have to be flexible and give customers all they want and more. But we've been training them to expect it — now it comes back to bite us."

— Michael Hornung

Customers in the world, but they all want it now. I had a customer call me three times and all she wanted was for us to take out one plant. Then, a new fast-food restaurant here gave me six days' notice to schedule and get their entire landscape placed."

Michael Hornung agrees. "You have to be flexible and give customers all they want and more. But we've been training them to expect it — now it comes back to bite us."

"Seven years ago, less than 1% of our customers wanted us to call before visiting. Now, 8% do," he notes. "We treated one lawn all year and then found bugs in the trees. The owner expected that he wouldn't have to pay for the extra tree treatment. He cancelled on us."

Jerry Gaeta sees it as a continuing trend. "Yes, customers are getting to be fussy, but that's how they are. Many of them are wealthy and want something extra. People everywhere are more demanding."

Snapshot 2000: Overview of an industry

Individual stories of growth range from 20% below 1998's levels to more than 100% growth in the last 12 months. How do they get these levels? Respondents to LM's State of the Industry survey showed the usual wide range of services offered in 1999 (see chart below). More than half of the respondents named at least six of these services in their mix.

Rising revenues
The optimism continues, with 69.4% of respondents reporting they expect an increase in revenue for the next 12 months and only 27% expecting revenues to stay put. Merely 3.6% of them expect a decline in sales.

The average landscape contractor's approximate revenues for 1999 were $1.22 million, compared to the average lawn care company's revenues of $322,000.

Current customer mix on average is 59.2% residential, 37.2% commercial and industrial and 3.7% other.

"We're seeing high demand for services in installation, maintenance, irrigation, tree care and environmental restoration," reports Wayne Richards.

Hornung sees other areas of growth. "Irrigation has really taken off with virtually no advertising," he says. "And after marketing (a year-round lighting franchise) one week, we've picked up $35,000 in revenues."

Fastest growing service segments (percent chosen as fastest growing business segment):

- Landscape design/build 33%
- Landscape maintenance 22%

- Chemical applications 6%
- Other specialty services 5%
- Irrigation Services 2%
- Tree care services 2%

Typical '99 annual operating budget

- Fertilizers/pesticides 8.6%
- Plants/landscape materials 16.7%
- Equipment purchase/maintenance 30.7%
- Overhead 20.9%
- Labor and recruitment 31.4%
- Other 4.2%

Operating lean, mean and green

How can you be lean and mean without a clear picture of your operating budget? Readers in our survey knew their budgets inside and out, and had an average operating budget of $495,000. This breaks down to an average budget for grounds management of $1.34 million; landscape contracting $518,000; and lawn care company $240,000.

Our survey's respondents had several challenges this year. The average rankings show that 72.6% listed labor availability as their number one challenge, followed closely by developing good field supervisors/foremen."
How you handle labor
That most precious commodity — labor — needs extra care, say landscape managers across the country. They were unanimous in naming it their first and most troubling priority.

"It's still a problem here in Dallas," reports Larry Brinkley. "Employees are moving from our company to a competitor for 25 cents an hour. Some of the competition are recruiting them on our job sites."

Brinkley says his firm's policy to hire only legal immigrants also hurts, and the requirements for housing and insuring H2B employees can be cumbersome. "Unless the government institutes an amnesty program for illegal immigrants, labor will be in trouble," he forewarns.

Labor has been tight since the Atlanta Olympics, notes Neil Thelen, and it has gotten worse during that time period estimated 15 to 20%. "We're careful with our people resources and have a good development program" to keep employees with his firm, he says.

Difficulty attracting lawn care technicians is one reason Mike Kowalchuk sold his firm to TruGreen-ChemLawn late last year. "In Michigan, you have to be certified or registered by the state to apply chemicals. On a regular landscape crew, you don't have to be certified to cut grass and you can have one guy who's the crew leader and who knows what he's doing. But in chemical application, you have one guy in one truck and that person has to be a self-starter, someone who is motivated and can think for himself. That type of person is hard to find."

Paul Harder cited more opportunities for his employees as one reason he sold his firm, Prescription Turf Services in Middleton, MA, to TruGreen-ChemLawn in February. "I wanted my employees to be able to take advantage of better opportunities. Plus, it has become excruciatingly difficult to find good people and keep them."

Although the average orga-
Two sides of the "contractor" coin

We combed our research to develop two profiles of "typical" landscape managers. For comparison, we selected data of small organizations (revenues less than $100,000) and larger ones (revenues over $500,000) from our Penn survey. Both could describe themselves as "landscape contractors."

Paying and keeping people

The average rate paid by survey respondents for new hires is $8 per hour. Average wages paid for the "best" employee was $14 per hour, ranging from $12 per hour for the smallest operations to a $18 per hour for large organizations.

As far as recruiting goes, about 75% of our respondents act on recommendations from current employees.

The smallest organizations focus on recommendations (61.1%), newspaper ads (27.8%) and walk ins/word of mouth (22.2%). Large organizations concentrate on recommendations (87.5%), newspaper ads (62.5%) and hiring from competitors (37.5%).

Several landscape managers are learning to deal with the labor situation in a creative way.

"Everyone wants to focus on human resources, but we don't like to focus on that," says Kent Miller, vice president at The Groundskeeper, Tucson, AZ. "Yes, it's a challenge, but we have over 30 different strategies to overcome it."

www.landscapegroup.com / JULY 2000 / LANDSCAPE MANAGEMENT
For some, protection can be a matter of life and death. But when it comes to protecting your ornamentals, death is not an option if you use Surflan herbicide from Dow AgroSciences. In fact, while being safe over the top of 400 types of ornamentals, it's still tough as nails on weeds. Surflan gives you extended control of 50 weeds such as crabgrass and goosegrass. It also strong-arms small-seeded broadleaf weeds like...
chickweed and henbit - weeds that are usually untouchable. Plus Surflan can be used in many tank mixes. So when it comes to protecting ornamentals while killing weeds, let's just say we've got an offer you can't refuse. For more information on Surflan or any other product in the extensive line of Dow AgroSciences products, call 1-800-255-3726 or visit our web site at www.dowagro.com.
A ‘cooling’ economy?
How are today’s leading indicators expected to impact the Green Industry? After a record six increases of the interest rate, signs show that the Federal Reserve’s policies may be working, gradually slowing an unheard-of rate of growth near 7%. Here’s what happened recently:

• We’re getting richer, but at a slower rate than 1999, says the Fed. First quarter household net worth grew only 2% in the first quarter of 2000, down from 8.1% in the last quarter of 1999.
• Unemployment rises only marginally — not enough to affect hiring opportunities in our industry. This may also be temporary.
• Housing starts dipped slightly earlier this year, which may or may not continue.
• Home mortgage demand fell by 56% in early 2000 and business loan demand fell 25% for the same period. Banks are tightening lending standards.
• April reports show consumer spending still strong, but at the slowest rate since July 1999.
  
  The Fed’s actions typically take six months to filter through the economy, so this is the big question mark. Growth may be slowing to the 3.5% or 4% the Fed thinks is sustainable, down from the 7% rate it reached in the fourth quarter of 1999.

Still a toss-up
Clearly, economic forecasts are still a toss-up. Economists may argue about the trends they see, but several trends may help you plan for late 2000 and into next year. Watch:

• Interest rates, which are keyed to inflation. Despite jumps in prices for gasoline, food and wages, inflation is steady due to drops in other prices. If inflation steadies, expect interest rate hikes to stop.
• Housing starts. Everyone expects higher interest rates to slow corporate and consumer borrowing, which in turn will slow investment and housing starts. How will this affect you? Some contractors feel that this will slow their landscape design/build business, but others think it will merely shift dollars into landscape renovation as clients stay put.

Disposable income. This is money consumers spend on big-ticket items — like landscapes, maintenance and special services. High rates of this generally means good news.

Unemployment rate. Don’t expect this to change for years. While good economic health continues, labor will be tight. Your competitors include other landscapers and anyone who offers higher wages, more benefits, easier work and a more pleasant organization.
IT TOOK THE EASY WAY OUT.

Break the spirit of any cutworm, sod webworm or armyworm with Conserve® SC turf and ornamental insect control. It controls tough pests as effectively as any synthetic. In fact, symptoms appear within minutes of contact or ingestion, putting an immediate end to plant damage. And, since Conserve is derived from a naturally occurring organism, it also helps control your worries about chemical applications and the environment. Learn more about Conserve. It’s Changing the Nature of Insect Control.™

Call 1-800-255-3726. Conserve.

The end of the line for insect pests.

Nature can be one tough Mother.™

continued from page 40

- **Productivity rate.** If you’re more profitable with the same operation, chances are you’re more productive. But are you getting the maximum levels of productivity? We suspect this industry has far to go before reaching those levels.

**Landscape managers look ahead**

Bozzuto Landscaping is focused on community housing projects in Maryland — on the front end of the housing market. Tom Davis hasn’t seen any movement either way, yet. “Our parent company, which is a real estate developer, has 16 communities in construction and as many in development. It’s too early for any slowdown to trickle down to us. And if new homes slow down, apartment may pick up.”

The recent difficulties of regulation and labor encouraged both Paul Harder and Michael Kowalchuk to sell their businesses. Others are restructuring their management, instituting new and advanced operating software or working hard to develop employees.

Neil Thelen’s investment in six-people Isuzu trucks and the switch to six-person crews is an effort to squeeze more efficiency from his organization while also developing his people. “Each crew has a senior and junior foreman because one person can’t manage six people,” he says. “The younger manager can then get trained and eventually move into a senior position.”

Dwight Hughes also remodeled his operations, using a new design of truck to carry people, equipment and plants. Hughes constantly searches for more efficiency and looks to equipment, rather than electronics, for solutions.

“Our industry is caught up in a trend of more computing, but computers are just a tool — not the answer,” he says. “You have to ask, who’s making the money for you? Is it a crew of workers pushing a B&B tree by hand or your computer?”

**Keep the momentum coming!**

As usual, fortune telling is an art few of us have. Experienced insiders like Rick Randall, CEO of Randall & Blake Inc., Littleton, CO, have business spread over several states. He sees some clouds on the horizon.

“It appears there is sufficient momentum to sustain adequate contracting opportunities at least through the first six months of 2001. After that, we do see some softening brought about by higher interest rates,” he explains. “The higher rates have begun to slow down residential development, which will slowly begin to pull down the rest of the economy.”

John Wheeler also has some misgivings about the prospects for his design/build division: “It’s too early to celebrate (for this year). It’s a good year now and we budgeted for an increase in business, but higher interest rates may slow down business. We hope the momentum keeps coming.”

**What’s your best strategy?**

It pays to be prepared for any eventuality, say several landscape managers. Here are their ideas:

- **Landscape maintenance.** This can be a constant battle to eke out the profits you need because of low-balling. Try to balance the investment needed to get efficient equipment with money to pay a competitive wage and keep good employees. Some vow to raise their prices in coming months, both to accommodate fuel and other price increases and to position their firms above the "price-war" fray.

- **Landscape design/installation.** This is a more complex business to manage because it’s hard to assure a manageable flow of projects, price goods and services for profit, invest in efficient equipment and organize the work for productivity. A clear niche, steady pricing, quality work, strong customer contact and investment in appropriate equipment may make a difference this year.

- **Chemical lawn care.** LCOs still grapple with the issues of low-balling, large competitors "churning" business, managing crews and routes for maximum productivity and balancing a simple and profitable mix of services. If you find the self-starters to handle your routes, do everything to keep them. Long-time players insist a solid treatment program, attentive customer service and add-on services will continue to make this segment profitable.

- **Irrigation maintenance/installation.** Landscapers are finding plenty of opportunity to offer irrigation services. The key to success depends on thorough knowledge, the ability to make this segment profitable and the capability of servicing all your potential customers.

- **Customers.** Both residential and commercial customers are impatient, spoiled and sometimes annoying. Develop a strategy to manage your customers’ expectations and weed out those who are more trouble than they are worth.

- **Client mix.** Diversify. If you have only a few main customers, it’s time to spread out and get others. If you’re in a well-defined niche, expand within it.
Good weed control, but wait until they all demand a raise at once.

There's good. There's better. Then there's the best: Snapshot® herbicide. It controls more broadleaf weeds and grasses than any other preemergent herbicide. 111 species, to be exact. For up to 8 months. Without damaging your ornamentals. Contact your distributor for more information about Snapshot. Or, call 1-800-255-3726.

You'll control weeds. And labor costs.

Three sure signs of weed control

Featuring Chaser® Ultra, the newest member of the latest generation of three-way herbicides

- A family of superior cool or warm season performers that control broadleaf weeds such as dandelion, clover, chickweed, plantain, oxalis and spurge
- Chaser® Ultra, made from the amines of Clopyralid, MCPA and Dichloroprop-p, is also effective on a broad spectrum of other weeds that are much harder to control such as ground ivy and Canada thistle
- Chaser® Ultra is not made with 2,4-D and because it does not contain Dicamba, it's better for use around shallow-rooted ornamental plants and trees
- Chaser and Chaser 2 Amine are economical Triclopyr and 2,4-D formulations with excellent turf safety and superior control of hard-to-kill weeds
- Use Chaser in cooler weather such as the spring and fall and Chaser 2 Amine when days are warmer for year-round control

Workers’ comp rates too high? These tips may help you and your crews operate more safely while you cut your insurance costs

BY BOB DECKER & ANDREW J. MAUSCHBAUGH

How much are your workers’ compensation claims costing? Keeping your employees safe makes sense — and saves dollars. In fact, according to the National Safety Council, U.S. companies lost over $127.7 billion in workers’ compensation claims in 1998. But by correcting unsafe conditions on your property and teaching safe equipment operating practices to your crew members, you can reduce costly lawsuits and unnecessary damage to your business.

During the last 100 years, loss control representatives at our firm have inspected thousands of landscape operations. They have found that the most common office workplace hazards are those that would seem to be the most obvious (see sidebar on page 50).
Leading safety hot buttons

Because landscape contracting, grounds maintenance and chemical lawn care employees perform a variety of tasks, there are several areas where hazards and hazardous operating procedures can be eliminated. Here are two of the key practices to focus on:

**Improper chemical protective gear** — Make sure your employees wear the proper protective gear when working with chemicals, especially in their concentrated forms. Loss prevention specialists say the time when employees most often avoid using their safety gear is while mixing chemicals and applying chemicals during hot days. To avoid employee chemical injuries, arrange spray schedules so your employees are not applying chemicals during the hottest part of the day, check chemical labels for specific information regarding recommended protective gear, and remind employees that using chemicals contrary to label directions is a federal offense and may endanger their health.

Make training for safe and proper equipment use a priority.

**Inadequate machine guards and power equipment safety practices** — While it has been said that "familiarity breeds contempt," it may be more accurate to say that "familiarity breeds carelessness" in the case of power equipment used daily in many landscaping operations. That's why it is important that your employees keep safety measures in mind all the time to avoid injuries and costly workers' compensation claims.

To protect your employees from serious injury or death resulting from contact with moving machine parts, check regularly to see that all power equipment

---

On-site risks to avoid

Based on the observations of loss control specialists, we've listed three of the most common office site risk factors, along with advice on how to correct potential problems.

1. Wet surfaces/floors. Uneven surfaces, walks, holes and changes in level are major sources of "slip and fall" injuries, both indoors and outdoors. Wet areas made slick by frequent watering and algae growth are also a problem. To cut down on the possibility of these injuries,
   - post warning signs, especially in slippery areas,
   - level uneven areas and fill in holes,
   - treat walking surfaces to reduce algae growth and routinely inspect walkways.

2. Cluttered aisles and walkways. Hoses left in walkways, as well as trees and shrubs that protrude, are tripping hazards. Bags of seed and/or fertilizer and storage pallets also present safety hazards for employees and others. To prevent these types of injuries, you should:
   - check walkways on a daily basis to be sure they are clear of obstacles,
   - be certain hanging items above walkways and doorways are secure and out of reach, and
   - make sure tool storage areas are secure (tools don't protrude).

3. Poor electrical wiring. Poor wiring is one of the biggest causes of fires. The most common electrical violations found are temporary wiring situations, excessive use of extension cords (including those made of "Romex" wiring) and improper splicing. To prevent the possibility of an electrical fire, heed the following advice:
   - Have your electrical system inspected by a professional electrician
   - Join wires by standard twist connectors. Wires that are twisted together can loosen and arc, which generates heat and more arcing, potentially causing a fire
   - Check extension cords to make sure they are of an adequate capacity for the load they are carrying
   - Do not place extension cords under carpets: Cords can break down from constant foot traffic and can smolder undetected, potentially causing a large fire
   - Never plug one extension cord into another extension cord
   - Be certain that all joints are inside a junction or receptacle box
   - Keep breaker and service boxes away from wet walls and protect them from leaks
Additional eye protection would increase the safety of this task.

is properly guarded. Make training for safe and proper equipment use a priority. If employees think you’re just giving it lip service, they might cut corners and alter equipment safety guards.

If a guard is removed from a piece of machinery to change a belt or make an adjustment, replace it immediately. Do not allow employees to bypass or remove machine guards when using equipment. Conduct regular equipment evaluations to see that all guards are present and damage-free.

**Equipment danger zones**

While the equipment used by landscape installation, lawn care and maintenance operations varies, many types have similar danger points such as those that follow. Specific practices for landscape equipment also follow.

**Fans** — Ventilation and engine fans can be some of the most common safety hazards if not properly guarded. The fan blades, fly wheel and pulley system must be protected to prevent accidental contact. Do this with a protective screen with openings no larger than 1/2 in. All circulating fans should have guards installed that prevent fingers from contacting the fan blades and/or motor. Older fans with guards that have openings larger than 1/2 in. should be retrofitted with smaller guards or replaced.

**Machine parts** — Air compressors, sprayers and similar machines also require protective guards. All V-belts on air compressors and sprayers, whether fixed or portable, should be enclosed. Watch especially for blades and protective guards on any chipper/shredder. Specialty equipment like log splitters have parts that must be guarded or kept free for safe operation.

**Trucks and other vehicles** — Proper training is vital in the operation of on-road equipment such as trucks, vans, tractors, forklifts, tree spades and bobcats. OSHA requires that only trained and authorized personnel operate this type of machinery. Most landscape managers do not permit an employee without a driver’s license to
The precision of a steering wheel, and front-mounted offset mower deck lets the F735 run circles around zero-turning-radius mowers when trimming.

The diesel F735, and gas F725 feature hydraulic deck lifts to clear curbs and other obstacles.

The precision of a steering wheel, and front-mounted offset mower deck lets the F735 run circles around zero-turning-radius mowers when trimming.

The diesel F735, and gas F725 feature hydraulic deck lifts to clear curbs and other obstacles.

With an industry-best 5.75-inch depth, maximum blade overlap of over 1.5 inches, and full-length front baffle, the 60-inch 7-Iron™ deck available for the F735 produces a flawless cut, even in the lushest conditions.
Every John Deere Front Mower (except for 1600 Wide-Area Mower) is designed with a unique geometry that ensures the rear of the machine stays within the cutting arc when turning. This permits these machines to trim closely but never run over flowerbeds, for instance.

Don’t be surprised if the F735’s performance blows you away.

A high-torque, liquid-cooled 20.5-hp Yanmar diesel engine and shaft-driven 60-inch 7-Iron™ seven-gauge stamped steel deck make it the most powerful mower of its kind.

Hydraulic weight transfer and a foot-operated differential kick in extra traction on inclines and slippery ground. Precise power steering and Twin Touch® two-pedal control allow instant and effortless direction changes. A tight turning radius, and compact layout ensure the rear stays within the cutting arc — perfect for cutting sculpted landscapes.

Best of all, a full-length welded C-channel side rail frame ensures it can survive any elements.

Interested in the affordable diesel F735 (or its gas-powered counterpart, the 20-hp F725)? Stop by your local John Deere dealer (call 1-800-537-8233 for one near you). You’ll be on cloud nine.
operate any mobile equipment. Many states do not allow anyone under age 18 to operate power equipment. Follow your state’s regulations.

**Mowers** — Mowers are so common that they are often overlooked as a safety hazard. Most new mowers have the required guards, but many older ones do not. All mowers should have a self-closing guard for the emptying chute. Side chute mowers should have a guard at the rear to prevent the mower from rolling back over the operator’s feet. All new mowers have a lever as part of the handle that will automatically stop the blade and/or motor when released. Older mowers without this feature should be replaced.

**Tractors** — The power take-off must be properly guarded. Establish and enforce a company policy that prohibits employees from riding mobile equipment unless they are sitting on the seat provided by the manufacturer. Prohibit additional riders on equipment.

**Skid steers** — Crews working rapidly may forget that a skid steer should never exceed the rated capacity — this is 1/2 of the listed tipping load.

**Aerial lifts** — Check all controls each time before using, and never use the lift if the basket controls are not operational. Don’t forget to attach the safety harness.

**Chain saws** — Never operate a chain saw with a damaged hand guard. Check that the chain is sharp and chain tension is neither too tight nor too loose. Wear eye protection and safety clothing.

**Edgers & line trimmers** — Wear eye protection with these products and do not operate if they are missing guards. When operating, be careful of bystanders.

Ensuring that workers’ compensation insurance is in force at all times can go a long way to protect your business. If you’re not sure as to whether your business is properly protected, ask your insurance company to conduct a loss control survey.

— Bob Decker is assistant vice president of loss control and Andrew J. Mauschbaugh is loss control engineering manager for Florists’ Mutual Insurance Co., which has been serving the floral/horticultural industry for over 110 years. They can be contacted at 800/851-7740 or www.floristsmutual.com.

---

**Safe operation’s big seven**

The Outdoor Power Equipment Institute recommends several key steps to operate any piece of outdoor power equipment at any location. Make sure your employees run through this checklist with every use:

1. Keep children and pets away from operating equipment.
2. Handle gas and fuel/oil mixtures carefully.
3. Never operate equipment unattended; turn off engine and disconnect spark plug before attempting to unplug or repair equipment.
4. Clear work areas from rocks, toys, large debris, etc. before using.
5. Dress properly for the job (long pants, close-fitting clothes, safety glasses, safety boots, tucked-in hair and no loose jewelry).
6. Keep hands and feet away from moving parts. This sounds elementary but people forget to turn off equipment before working on it.
7. Understand how to operate the equipment. Follow manufacturers’ directions, get training on proper operation and follow safety instructions.

For more information on safe operation of outdoor power equipment, contact OPEI at 703/549-7600.
By the day. By the job. By the week.

Get out of your employees' way

Turn your training over to your troops and watch them teach you a thing or two about learning together

BY PHIL FOGARTY

Does the conversation in your shop go like this: "I know we should be doing more training, but I just don't have the time to do it on a regular basis." Is this an impossible problem? No. Maybe you shouldn't do it.

Why is it that we as owners and general managers think that everything must be done our way for our companies to succeed? Of course, we might not have gotten where we are today if we didn't have a pretty healthy sense of self and a good shot of ego. But let's face it — we didn't invent this industry.

With all the training resources out there, all you may need to do is give good employees some of your time, encouragement and make them aware of your goals. The goals must be clear cut and attainable. Then, let your employees design and execute an effective training program. Based on my experience, I can say that what your better employees devise will be at least as good as what you would come up with — if you give them the right guidelines.

Get out of their way!

If there's anything that the Skills Development Series has taught us, it's to turn training over to the troops — today. It's a liberating moment for everyone in your organization. Your employees already know what they need to know and the last thing they need is for you to tell them what they don't know (and that some day you will tell them — but now, just get out there and work until further notice).

Get out of the way and watch those people teach you a thing or two about learning together.

Cover the bases

Here are a few steps to make sure the program succeeds when you delegate it:

An in-house facilitator like this one is just the right person to delegate training responsibility among fellow employees.
One of the facilitator’s key jobs is to get everyone involved by coaching and encouraging everyone to own the program.

- Assign an in-house facilitator to take on this cause. Pick someone who can get enthusiastic about training. It could be a key manager or an employee with potential who needs to be demonstrated. It’s even a great slot for a part-timer who can focus on teaching, teaching, teaching.
- Make sure the facilitator understands the value of getting others involved. He or she shouldn’t be doing all training, or even half of it. The facilitator’s job is to coach and encourage everyone to own the program.
- Make it flexible like Gerry Grossi’s fine group did at Arborlawn in Lansing, MI. Grossi’s Spartan Irrigation runs its program simultaneously with Arborlawn’s sessions. They customize and adapt but use the same format and information, and they do it at different locations.
- Mold it around schedules, if at all possible. Mountaineer Lawncare in Morgantown, WV, has sessions in the field (at lunch) for crews who must contend with long drives at rush hour.
- Become a spectator and cheerleader. Cullen Walker of WLM Work-A-Holics Landscape Management in Naples, FL, built bleachers for training and sits in a different spot each week so he can learn along with everyone. He may be doing the wave, as well!
- Promote the cause when it’s your turn to teach. When you get to be the one up front, spend some of your “mike” time acknowledging the progress and reminding your team how important this program is to you and to the future of the company.

**OTTERBINE®....**

**Your Water Quality Management Specialists**

**Surface Aerators**
- Reduce the problem of algae, aquatic weeds and odor.

Circle 113
10 Reasons why I won't work for you
Try looking at the world according to your employees. It could save your future

BY BILL HOOPES

When it comes to keeping good people, there's almost nothing you won't do to keep them on your team, right? You're typical if you answered, "I'd do anything, within reason, to keep the really loyal and productive employees I have."

But when it comes to changing your workplace to encourage employee retention, what meaningful actions have you taken? If you'd like to change things but don't know how to start, you're fairly typical. Most of us dream about a better world but don't follow the dream with action. But if you don't do more than think a lot about revising the way you do things, there will be no improvement.

So let's set some realistic goals. You're a goal-oriented, entrepreneurial thinker, right? Let's set an objective: lower turnover by 50%.

How much would it be worth to your operation to reduce turnover by 50%? Most managers I work with would like to make it happen but aren't sure how to get it done.

It can be done. I've just completed a 15-year search for realistic solutions to the turnover problem, which I've identified and included below.

Why they leave
Solving a tough problem requires looking at it from a different or unfamiliar angle. For a change, look at motivation from a contrary view. Instead of jumping head-first into the turnover pool and confronting the issues from your point of view, look at it from the employees' view. Think about why they leave.

The short answer is because they're not motivated. We all become motivated when we desire something. Before we go for it, we must want it.

Here are two reasons why you must understand how to use motivation:
- You cannot achieve anything beyond your own capacity without other people.
- If your staff resents, distrusts or dislikes you, they will leave the minute they get the opportunity. Today, that opportunity is everywhere. So understand how motivation works and how to use it. You'll see your business environment from a whole new perspective, because you will understand why people do the things they do.

What's their motivation?
What controls our wants? At work or at home, we do things that make sense to us. We evaluate our options, decide and then act.

How does this apply in your workplace? If you want your employees to perform satisfactorily for extended periods of time and respond to your leadership, you must get into their heads.

If you want your employees to think positive thoughts that lead to positive behavior (like hitting goals or staying through a tough spring), you must provide a positive workplace environment. If you think they'll stay for dollars, you are mistaken. Employees must like their work to stay there.

Notice I said that you have to "provide" a positive workplace environment. It doesn't happen automatically. You must create an environment that positively impacts employee motivation, and that comes down to building relationships that are mutually beneficial.

Take off those blinders and look around
The workplace has to "work" for both you and your employees, and that's not always easy.

Some managers still don't recognize the difference between situations that favor employers and...

continued on page 56
Follow this plan to cut employee turnover at your operation:

1. Improve the candidate-to-job match as you build your team — no square pegs in round holes.
2. Place a higher priority on training. Use the start-up program to “set the hook” and start building positive thoughts and feelings.
4. Give people a reason to believe. Stop flying by the seat of your pants. If you’re organized and set an example, people will want to follow you because they see strong management. Talk constantly about company values and beliefs to build a sense of pride. Brag about your staff in public and in your advertisements.
5. Recognize and treat people as individuals. Identify individual talents and potential while you respond to their individual needs.
6. React to each employee’s performance every day. Look for something to reward and don’t send mixed signals.
7. Be fair to everyone. Don’t play favorites. Tell your people why you want them to do it your way.
8. Be honest 100% of the time. Remember: If you lie, you die.
9. Set a positive leadership example. Put a smile on your face before you go through the door each morning. Never let the staff see you down. Positives create positives; negatives create negatives.
10. Balance your concern for tasks and people evenly. Try to be someone your staff just likes to be around.

If weed-whacking is all this guy ever does, he’s bound to leave his job.

Continued from page 55 those that favor or motivate employees. At times, it’s as if they’re wearing blinders.

Are you certain that when you make a decision or establish plans, you are creating a situation where both you and your employees benefit?

Consider this example: A new hire arrives at work. At the moment, you are unavoidably involved with a customer. To handle the customer issue and avoid a delay in the start-up of the new person’s training, you have a veteran handle the orientation.

Sounds simple. After all, you can’t avoid the customer issue . . . it’s all part of business, right? And since the training oc-
LEADS THE WAY AS THE

TOTAL SOURCE SOLUTION

FOR OUTDOOR POWER EQUIPMENT

Call 1-800-HUSKY 62 for the Husqvarna Servicing Retailer near you or www.husqvarna.com
will deliver the message as you would, at least not most veterans. Why? They don’t have the ownership concern you do. So the orientation happens but the message is diluted or changed altogether. And who pays the price? You do.

It’s all in the perception
Managers typically see their needs before the needs of the staff. When there is an exception to that rule, employees are more satisfied and turnover drops. I’ve seen turnover drop drastically when the manager in charge learns to see the workplace from the employees’ viewpoint.

If this guy’s boss is goofing off while he’s working, he’s likely to look for another place to work.

But the problem is that when workers quit, they never say, “I’m leaving because you get what you need (an easy life, lots of profit, a great future) and I don’t get what I need.” You won’t hear that, but you may hear any of the 10 reasons below.

“Why I’m leaving”
In the last 15 years, I have tracked and explored the reasons employees have left. They are:

1. “This job isn’t what you said it would be.” Translation: You either failed to explain the job requirements, or you’ve had smoke blown in your face during a hiring interview. Under pressure to “fill the chairs,” we try to see the best in people. If you hear this phrase, you’ve misread the job candidate or mislead yourself.

2. “I just can’t do this job.” Translation: More than likely, there has been a failure to provide adequate start-up training or the employee is simply bored by the work.

3. “All we do here is work.” Translation: Typically, the manager has been unable or unwilling to control work hours. This happen during a bad weather spring, when we fail to eliminate long days and/or Saturday work after promising we would.

4. “Nobody here knows what the heck is going on.” Translation: From the employee’s view, your operation is disorganized and inconsistent.

5. “All we ever hear is what’s wrong.” Translation: When I hear this, I usually find a manager who is totally task-oriented. When the task goals aren’t met, there can be only one reason for him or her — lazy workers. This may not be true, but that’s the employee’s view ... and that’s the point.

6. “You never say thank you.” Translation: Employees in this operation probably get little recognition and few rewards. Managers who don’t give credit to the team and don’t share rewards will lose 100% of the time.

7. “I don’t fit in here.” Translation: The workplace climate isn’t people friendly. It may work for you, but what is it like for your employees?

8. “You always promise but never deliver.” Translation: Many managers promise an employee whatever they have just to boost productivity, then fail to deliver. They are so stressed and beaten down they see no other way to get people to work hard than to “promise the world.”

9. “You expect us to work while you goof off.” Translation: Tired managers can develop a habit of showing up for the start of the day, then disappearing (at least they believe they’ve disappeared) to the golf course or other activity while the staff “delivers the goods.” Whether you own the business or not, employees won’t tolerate what they consider lazy leadership while being pushed to the limit themselves.

10. “It’s just no fun working here.” Translation: This is a typical “exit interview” comment from employees of “task-oriented” managers. To keep people, there must be a perceived balance between the manager’s concern for people and tasks. When the employee doesn’t sense the balance and feels that work is the only thing management thinks about, turnover rises.

Your employees may see situations you see as beneficial from a different perspective. When you understand motivation and its impact on employee actions, it’s easy to see how negative feelings build. To reduce turnover, every manager must do all he or she can to see that the “world according to the employee” is filled with recognition, rewards and a sense of fairness.

If you show employees a nurturing environment with a bright, positive future full of new assignments, opportunities and fun, you’ll discover the power of human motivation.

Westmoor Farm

The 1999 Grand Award Winner of the Professional Grounds Management Society for Residential Site

The Westmoor Farm is a private estate and summer home covering 64 acres with 18 houses, five barns and a greenhouse. A regulation-sized baseball field, 18,000-sq.-ft. ornamental vegetable garden, miniature apple orchard and an acre of manmade ponds and water features give the in-house grounds maintenance crew a variety of challenges.

A monster irrigation system that consists of 103 zones and nine water sources has to be frequently reprogrammed and checked for malfunction. Last year’s drought brought out design flaws and forced grounds crew members to relocate or add sprinkler heads to zones wherever possible.

Trained vines can be found everywhere, so the grounds crew spends a good deal of its time training fledgling growth while maintaining the already established clematis, espaliered laburnum, hardy kiwi, honeysuckle and grape vines. New to the property are container displays, which, head gardener Candace Clough says, have allowed her crew members to be more creative in layout and planting. In one area, the color of both flower and foliage might be monochromatic, where another area might feature chartreuse and red leaf specimens.

Looking out the front door of the “Red Barn,” Westmoor Farm’s dining hall, one sees a monochromatic container display.
Grounds crew members Wayne and Damian prune and train the wisteria vine on the bridge at the big pond.

Editors' note: Landscape Management is the exclusive sponsor of the Green Star Professional Landscape Management Awards for outstanding management of residential, commercial and institutional landscapes. The 2000 winners will be named at the annual meeting of the PGMS in November. For more information on the 2000 Awards, contact PGMS at 720 Light St., Baltimore, MD 21230; 410-752-3318 (tel). Better safe than sued

BY CURT HARLER/CONTRIBUTING EDITOR

Nobody wants to see a fellow worker or an employee get hurt on the job. But let's face it: safety is given lip service more often than real action during the busy season (and during slack times, too).

As an employer, it's your responsibility to provide proper safety equipment and see that it's used all the time. Lawsuits come from the strangest places — injured workers, endangered passers-by, state or federal agencies, property owners and motorists on the highway. Any of them could be after your hide on an assortment of counts: personal injury, a record-keeping violation, an accident involving a landscaping trailer parked by the side of the road or a stone thrown by a mower.

Stack the deck in your own favor. Look for proper safety equipment and reward workers who get caught "doing something right." You don't have to reward them with a lot — free coffee and doughnuts the next day or lunch at the local dive would be sufficient recognition. Others on your crews will catch on fast after one or two "attaboys" are given.

Best of all, you'll have established a proven track record for emphasizing and rewarding safety — something that will go a long way toward reducing punitive damages should a disaster hit or a government inspector notice something else you've overlooked.

While you're at it, check the first aid kit in the pickup. Be sure the Band-Aids are new, look for a good antiseptic cream and check that other components are still sterile.

**AEARO CO.**

Want a new source for pest information?

www.pestfacts.org

Termites, cockroaches, rodents, even poison ivy and other nasty weeds. They're all pests, which means they can cause real problems that pose health and safety risks to children and adults. The good news is now you've got the Pest Facts Information Center at www.pestfacts.org. It's a handy resource discussing the problems caused by pests, as well as the safe and responsible use of urban pesticides and related issues. So don't just sit there...log on.
Rick Heidvogel and Brian Blaschka regularly install irrigation systems at estates with homes valued from $800,000 to $3 million. The two are partners in The Lakeland Group of Nashotah, WI, specializing in irrigation, lighting and landscape management.

Nevertheless, a $1.8 million estate in nearby Oconomowoc, in the “Lake Country” area in southeastern Wisconsin, challenged their ingenuity. The 6-acre estate had elevation changes of up to 65 ft. It also contained large turf areas, annual beds, perennial beds and hanging potted plants.

Rather than irrigating the grounds from a well, the property uses the adjacent lake for its source of water, something that Heidvogel began perfecting in 1990 when he started the company.

**To a higher level**

“This required obtaining a pump station to distinguish between high-flow pressure demands and low-flow pressure demands,” explains Heidvogel. “But pump stations don’t like to see such a wide range of performance, so we had to figure out how to take technology to a higher level.”

Blaschka and Heidvogel, along with the engineers at Watertronics pumping systems, based in nearby Hartland, WI, designed a 7.5-hp pump station using what’s known as programmable logic control. The station can sense and adjust flow and pressure to meet the requirements of different turf and landscape areas on the estate. Some plants need more water than others, and at different times of the day.

“The potted plants around the pool needed water multiple times per day because the pots are clay and black and get very hot from the sun. We needed to water them not only to keep them...
continued from page 71
alive but keep them cool," Blaschka ex-
plains.

"The small grass areas around the
steppers also needed to be put on a
daily watering schedule. We ended up
putting all the small demand beds and
little turf areas on separate zones based
on plant life, shade and other factors. It
was costly, but it worked perfectly," he
says.
The owner of the estate didn’t want
any water to get on the steppers, so
Blaschka and Heidvogel turned to Netafim
drip irrigation for precise watering. "We
chose this product because it has worked
well for us, and we knew we could bury it
under the turf around the steppers," 
Blaschka says. "Also, we had the ability to
punch into the drip with emitters that al-
lowed us to run tiny tubes up into each in-
dividual potted plant around the pool
area."

Blaschka and Heidvogel ended up in-
stalling a sophisticated, $30,000 irrigation
system with a pump station that could
handle both high pressure/flow needs and
low pressure/flow needs. Also, drip irriga-
tion and line emitter tubing helped the pair
get water to where it was needed with no
waste.

"Pump stations
don’t like to see
such a wide range
of performance."
— Rick Heidvogel

edited by William E. Knoop
125 pages, softcover • Item #LSMB830
$24.95 plus shipping/handling

• Provides an overall understanding of turf and landscape care and management and
  covers all the basics of the green industry
• Covers all the topics golf course superintendents and students of turfgrass and
  landscape management need to know
• Combines practical information with the tried and true basics of management to
  provide a single, practical, affordable and up-to-date text
• Features detailed information, charts, diagrams, figures and tables to illustrate key
  information points

The Landscape Management Handbook provides a unique, single-source reference of comprehensive information on a
variety of turf and landscape topics. It’s an ideal handbook for golf course and lawn care superintendents and crew
members, and is also appropriate for schools that teach basic turf and landscape management.

**Transplant shock**

I planted 10 five- to eight-ft. white pines last spring, and all summer I watered them with a drip hose and saw some new growth. By October some of the needles on all of the trees were turning yellow. What should I do?

— VIRGINIA

The yellowing and dropping of some of the needles in all plants appears to be related to transplant shock. Most transplanted plants, because their absorbing roots have been cut off and lost in the original growing area, experience transplant shock. They need to reproduce new absorbing roots and readjust to new sites. They also need to be watered well during this period. Too little watering can cause drought effects and too much watering can cause needles to turn yellow. The key is to keep the area moist all through the planting and establishment period. The recovery may take four to five years for a 1- to 3-in. trunk caliper size plant, and a 4-in. and above plant may recover in five to ten years.

Some fertilizers such as a quick release source of nitrogen can burn the absorbing roots if overused.

Other causes of yellowing and defoliation include root rot diseases, drought or natural causes. Normally, three-year-old needles do become yellow and drop. Study the plants and see if any of the one- to two-year-old needles are showing symptoms.

Since these plants are under stress, it is a good idea to protect them with borer treatments using insecticides such as Durban or Astro. Also, reduce stress by improving plant health through mulching, watering and fertilizing as needed.

**Unwanted vegetation**

Which is the best herbicide to control/eliminate unwanted vegetation like banyan trees and allied plants, which sprout beside buildings and even occur in cracks near buildings which damage the masonry, structure and brick work?

— INDIA

Glyphosate 41% SL (Roundup) is one of the best ways to manage these undesirable sprouts. Another option is to use Picloram (sold as Tordon in the United States), Trichlopyr (known as Garlon) or clopyralid from Dow AgroSciences. These products may be sold under different names in India. Make sure they are labeled for this specific use. If not, test these products on a small area with proper permission. Treat plants when they are actively growing.

Another possibility is to use Arsenal herbicide from American Cyanamid Co., which can be sprayed over the sprouts or applied by hand with the cut-stem method. Again, make sure that the product is legal to use.

For small plants (sprouts), one application may be sufficient. However, for large plants, multiple treatments may be needed.

Provide selective pruning as needed. When dry, disinfect the pruning tools between cuts. For anthracnose disease management, provide fungicide treatments such as Cleary's 3336 or trunk inject with Arbotect fungicides. Follow good injection guidelines to obtain good results. Also provide proper mulching, watering, and fertilizing as needed to help improve plant health.

**Injured buds**

We have a large, mature sycamore on a client's property that has been slow to foliate this year. We noticed that the leaf buds formed, but never sprouted into full grown leaves and appeared dead. What can we do to help this beautiful tree?

— OHIO

The "slow to foliage" problem is probably because the buds are damaged. The buds were formed last year and were injured some time before bud break.

The damage could be from frost. If the buds broke dormancy before the last frost, the exposed plant parts could have been injured. However, the trees will refoliate by using the stored energy. If it happens year after year, this process can weaken the plant by depleting reserve energy of the plants.

The damage could also be from an early season leaf disease like sycamore anthracnose. This disease can be active under cool moist periods during spring. The fungus produces spores in previous years' cankers, infects the buds and causes bud blight. From there it infects leaves and causes leaf blight. Next, it causes twig blight and produces cankers.

Provide selective pruning as needed. When dry, disinfect the pruning tools between cuts. For anthracnose disease management, provide fungicide treatments such as Cleary's 3336 or trunk inject with Arbotect fungicides. Follow good injection guidelines to obtain good results. Also provide proper mulching, watering, and fertilizing as needed to help improve plant health.
No more core cleanup
The Grasshopper Company's new Aeravator makes core cleanup a thing of the past and leaves your turf available immediately after use. Its oscillating, forged steel tines penetrate and fracture the soil, and it requires no irrigation prior to operation. It comes available in PTO-driven 40- and 60-in. models.
For more information call (316) 345-8621 / circle no. 250

A real gas
The W.E. gas cap guard, which fits both walk-behind and ZTR/riding mower gas tanks, prevents tampering with or theft of gas. It's also easy to install with ready access for the operator.
For more information call 904/761-2427 or visit www.wechapps.com / circle no. 251

Stop tough weeds
Manufactured by DOW AgroSciences LLC, Lontrel T&O, a selective post-emergence herbicide, offers superior control of the broadleaf weeds landscape professionals see most — clover, dandelion, thistle, dollarweed, groundsel and plantain. Lontrel's active ingredient, clomansul, moves through plants and attacks all parts, including root systems. Lontrel contains 3 lbs. of the active ingredient per gallon and is packaged in a tip-and-pour quart-sized container. Applications vary from .25 to 1.33 pints per acre or up to .5 oz. per 1,000 sq. ft.

Hedge and prune
Shark Corp.'s YardShark telescopic hedger/pruner combines precision-ground cutting blades with a lightweight handle that changes its length for cutting high tree canopies or reaching into thorny vegetation. With a single-handed flip of a lever, it grows from 31 to 46 in. so the user never has to change tools.
For more information call 800/777-5538 or visit www.sharksaw.com / circle no. 253

Speedy aeration
The Ryan Lawnaire is perfect for lawn care professionals and rental equipment operators who require core-type aeration at a high rate of speed. The self-propelled aerator features a 19-in. aeration width and covers up to 21,000 sq. ft. per hour. It can penetrate up to a depth of 2.75 in. with the added weight bar and full roller drum. It comes equipped with 0.75-in. diameter tines.
For more information call 888/922-TURF / circle no. 254

Along the curb
Borderline Stamp USA's curb machine can extrude low or line voltage lighting directly into the concrete curbing to enhance landscapes at night. Borderline also offers many types of landscape curbs that can be textured in a wide variety of patterns.
For more information call 888/999-6641 or visit www.bordertinestamp.com / circle no. 255

Pneumatic seeder
RotaDairon's pneumatically powered, multi-purpose combination soil renovator and seeder uses an air-assisted seed delivery system to save labor and enhance the performance of the unit. Models come in 10- and 13-ft. wide versions.
For more information visit www.mge-dairon.com / circle no. 257

Portable spreader
SOLO's new portable spreader can spread ice melters, oil absorbers, sand, fertilizers, and seed and cleaning agents over irregular terrain more conveniently than a wheeled spreader. A built-in agitator and propeller operation eliminates blockages and improves uniformity of spread. It offers up to 20 lbs. of capacity and weighs only 5.5 lbs.
For more information call 757/245-4228 or visit www.solo.us.com / circle no. 256
Flower/foliage food
Simplot Turf and Horticulture's APEX Flower and Foliage controlled-release fertilizers come in four different formulations — 19-5-12, 19-6-12, 18-6-12, and 17-5-11. Featuring Polyon controlled-release coating technology, they provide nutrient longevity from three months up to 16 months. Additionally, all of the nutrients in the new APEX Flower and Foliage line, including magnesium and micronutrients, are uniformly combined in homogeneous granules to ensure each one contains the same elements.
For more information on APEX Flower and Foliage call 800/992-6066 or visit www.simplot.com / circle no. 258

Spray it
Otterbine's Concept2 line of aerators handle surface spray aeration needs for ponds and lakes: the High Volume2 unit has the highest pumping rate per horsepower of any aerator on the market and provides maximum work with minimum appearance. The Sunburst2 offers both aesthetic enhancement and aeration. The Phoenix2 offers a dual spray pattern. All Otterbine aerators come with 50 ft. of cable, a power control center and a warranty.
Contact Otterbine at 800/237-8837 or www.otterbine.com / circle no. 259

Shoot for the sky
AquaMaster's Celestial Fountains can produce spray patterns up to 100 ft. in horsepowers from 10 to 25. They feature oversized flotation tires for easy launching, polyethylene, in-water adjustable floats, stainless steel frame with 16-gauge stainless steel intake screen, electrical control panel, 100 ft. of underwater cable, cable disconnect and interchangeable nozzle. An optional 500-watt stainless steel halogen lighting system is also available.
Contact Aquamaster at 920/693-3121 or www.aquamasterfountains.com or circle no. 260

Low pressure rotor
Hunter Industries' I-60 is a low precipitation turf rotor that provides 50 to 66 ft. of irrigation coverage for parks, sports fields and other areas where low water pressure is a concern. It's designed to operate at 40 to 60 psi, doesn't require a booster pump, has a 3-in. pop-up height and is available as a full circle or adjustable arc (40° to 360°) model.
Hunter Industries can be reached at 800/733-2823 or www.hunterindustries.com / circle no. 261

Trimming flexibility
Echo Inc.'s curved shaft hedge clipper has a 7° bend in the shaft at the gearcase end which allows operators to trim complex shapes while standing comfortably at the base of a tall hedge. A 51-in. shaft allows operators to trim tall hedges without using chairs or ladders. Other features include a 23.6cc commercial-duty, dual-ring piston engine and 20-in. double-sided, double reciprocating blades with a 10% increase in speed.
For more information call 847/540-8400 or visit www.echoincorporated.com / circle no. 262

Pelletized compost
Now it's a breeze to apply compost with Planet Green's concentrated pelletized compost. These light, clean pellets can be applied with conventional drop or broadcast spreaders. Planet Green's compost offers a consistent 2-2-3 analysis with 6% calcium and 1% iron.
For more information contact Planet Green at 888/425-2827 or www.planetgreen.com / circle no. 263

Calibration made easy
The PrizeLawn AccuRate Calibrator is designed to make rotary spreader calibration easy, practical and accurate. A materials collection box with an easily removable receptacle pan, it prevents granules from escaping and falling to the ground during the calibration process.
For more information contact the PSB Co. at 614/228-5781 or www.psbc0mpany.com / circle no. 264

Sharp tools
Lowell Corp.'s pruners and brush cutters come in three models, two heavy duty brush cutters and one point cut pruner. The Forester models come in two sizes, 27-in. long, 4.5/8 lbs., cutting capacity of 1 1/2-in., and 34-in., 7 3/4 lbs., designed to cut 2-in. material. Composite grips provide cushioning for the hands while minimizing slippage. The point cut pruner can cut right down to its tips with minimal handle spread, reducing worker fatigue. The handles open wide for capacity cuts of material up to 1 1/4-in. thick.
Contact Lowell at 800/456-9355 / circle no. 265

Weed control
Compared to plastic film and laminated landscape fabric, GCI Professional Landscape Fabrics allow air and water to pass through to plant roots, ensuring healthy growth. They're perfect for weed control in container fields and greenhouse floors, landscape bed designs/tree planting, and as a filter fabric for trench drains. Use them to not only control weeds but stabilize soil under paving stones and prevent soil loss and erosion behind retaining walls.
For more information contact GCI Industries at 800/560-4GCI / circle no. 266

Rugged trailer
ShoreLand'r's trailer boasts a 1,400-lb. capacity. The deck measures 52 in. x 100 in. and is made of 5/8-in. premium grade plywood. Stake pockets along the frame accept 2 in. x 4 in. uprights for side rails or provide convenient tie down points. A full axle and leafspring suspension make for smoother towing, molded fenders protect cargo from road debris, and built-in, anti-skid step pads in front and back allow convenient entry. Another feature is the rear gate/ramp that allows workers to drive an ATV, golf cart or riding lawnmower right onto the bed.

Visit ShoreLand'r's Web site at www.shorelandr.com

In the clutch
DewEze Mfg. has come out with a clutch pump mounting kit for the 1999-2000 model Ford Super Duty with the 5.4L and 6.8L Triton engines. This new kit incorporates the Ford approval "Spider Mount" in its design, which meets Ford's requirements to maintain engine warranty in the mounting of accessories. Like all DewEze kits, this is serpentine drive with an automatic belt tensioner. The bracket is a one-piece hardened aluminum casting that is CNC machined for exact fit.

For more information contact DewEze at 800/835-1042 or www.deweze.com / circle no. 268

Bye bye nutgrass
Lawn and Garden Products says that the Nutgrass Nihilator controls yellow nutgrass by killing nutlets instead of burning down just the top of the plant. Apply it with an oil concentrate like Herbicide Helper, which assists in the herbicide getting into the inner tissue of the weed.

Contact Lawn and Garden Products at 559/499-2100 or www.montereylawngarden.com / circle no. 270

Sweepin' it all away
A broom? Attached to a truck? Believe it, because TrynEx now has the Pro-Broom Truck Mount. Attachable to most brand name snowplows, the broom is built with a 90-in. mainframe constructed of 10-gauge hot-rolled pickled steel. Eight poly brush rows and a dual-angle hood helps tackle tough material or push heavy objects. No moving parts eliminates the need for cleaning and lubrication of sprockets and bearings. The Pro-Broom Truck Mount also comes in a 48-, 60- and 72-in. mainframe sizes.

Contact TrynEx International at 800/725-8377 / circle no. 271

Herdicide enhancer
Precision Laboratories says its new product, Delux, will enhance the performance of generic glyphosate and certain postemergence herbicides on hard-to-control weed species. It's a biodegradable activator surfactant and ammonium sulfate premix that ties up antagonistic hard water ions and providing ammonium ions for improved herbicide uptake. Delux comes in 2.5-gal. containers.

Call Precision Control at 847/498-0800 x33 / circle no. 272

Aquatic herbicide
Avast! from Griffin L.L.C. is a slow-acting aquatic herbicide selectively effective on target species, allowing desirable vegetation to be reestablished without oxygen deprivation or fish kill. Avast! continues to control problem weeds for up to 12 months with minimal risk to the aquatic environment. It is available for sale as a flowable liquid formulation...

The PV-II is the most cost effective Parking Lot Sweeper on the market today. Take a look at the advantages over a conventional truck mounted sweeper:

- No need to purchase a dedicated truck
- The PV-II loads and unloads from YOUR truck in just minutes, allowing YOUR truck to perform other tasks, like pushing snow, etc.
- Due to the Poly design of the PV-II, there's no need to replace expensive replacement parts due to rust and abrasion.
- Best of all is the PV-II's low cost, which is thousands less than the nearest truck mounted units.

Call today for a free no hassle demonstration of the AA-Tach, PV-II.

Help Wanted (Cont’d)

TOWN OF BROOKLINE DEPARTMENT OF PUBLIC WORKS - Director of Parks and Open Space. The Director of Parks and Open Space manages the operation, improvement, protection and maintenance of the Town’s system of public parks and open spaces. The Director provides effective leadership and has vision for long range planning and policy development. The Director is responsible for the management of Division personnel, administration, labor relations, training, staffing and evaluation of employees. The Director plans the Division’s seasonal and long-range work program in the parks, playgrounds, cemeteries, conservation areas, public ways, historic landscapes and school grounds. The Director manages Town landscapes, oversees and maintains heavily used athletic fields, supervises operations teams, advocates for necessary resources, facilitates extensive public review processes, trains department personnel, oversees the development of stewardship and maintenance plans for the care of open space, and acts as technical advisor and liaison to several Town agencies and boards. The successful candidate must have exceptional management abilities, good oral and written communication skills, a strong proficiency with computers, excellent organizational skills and flexibility to perform a wide variety of tasks. The Director must be available for frequent evening meetings, and in the event of emergencies. Candidates must have an appropriate degree and at least seven years of directly related professional experience. Salary range is $70,658 to $80,790 with excellent benefits. AA/EOE Interested candidates should send a resume and cover letter to; Personnel Director, Town of Brookline, 333 Washington Street, Brookline, MA 02445.

Supervisor of Landscape Construction: The University of Missouri-Columbia Department of Landscape Services is seeking candidates for the position of Supervisor of Landscape Construction. Responsible for the operation, management and fiscal oversight of the landscape construction unit, this position directs a staff of 7-10 in performing all landscape construction and repair projects on the 700 acre University Campus. Additional responsibilities include project management; coordination with landscape architects and building construction managers; plant procurement; nursery management and snow removal. Minimum qualifications include a bachelor’s degree in horticulture or a related field and four to five years experience in grounds maintenance or landscape construction, including supervisory experience or an equivalent combination of education and experience. The successful candidate will be self-motivated, innovative, organized and skilled in personnel management. Landscape Services provides professional landscape architecture, construction and maintenance services to the MU campus, designated as the University of Missouri Botanic Garden. We offer an excellent benefits package and a salary range of $25,801 to $47,305. Please call Leanne Lake for additional information at 573-882-4240. Send resume to University of Missouri-Columbia, Human Resource Services, 130 Heinkel Building, Columbia, MO, 65211. AA/EOE 7/00

Way to go, UMass!
It always feels good to be first in anything, as the Stockbridge School of Agriculture at the University of Massachusetts can attest after becoming the first academic institution ever to receive the Award of Merit from the National Arborists Association (NAA). The award is the highest honor awarded by the NAA to an individual or organization that has "positively influenced the practice of arboriculture." Stockbridge School was originally part of the Massachusetts Agricultural College, where the first shade tree care course offered in North America was taught in 1894. It was not until 1946 that "Mass Aggie" launched the Stockbridge tree care program.

Numerous respondents to LM's 2000 STATE OF THE INDUSTRY SURVEY indicated they would like to provide more training for their employees on a number of topics. Their preferences for training follow:

<table>

FISH WHERE THEY'RE BITIN'
According to The Wall Street Journal, areas with colleges seem to be the easiest places to find work and the hardest areas to recruit. March figures from the Department of Labor list areas with extremely low unemployment: Columbia, MO (1%), Charlottesville, VA (1.3%), College Station, TX (1.6%), Ann Arbor, MI (1.9%). Conversely, recruiters might aim at high unemployment centers (often agricultural areas plagued by bad weather or low commodity prices), which the Labor Department pinpoints as: Visalia and Tulare, CA (18.8%), Merced, CA (16.8%), Yuma, AZ (16.2%).
SOMETIMES YOU'VE GOT TO CHANGE YOUR NAME, IF YOU'RE GOING TO PLAY THE GAME.

FLORISTS' MUTUAL IS CHANGING ITS NAME TO FMI.

If your name doesn't describe what you do and how you approach your business, it's time to make a change. Today, the time has come for Florists' Mutual. When we founded our company more than a century ago, our name described us perfectly. But we've grown and changed since those early days. Today we still provide superior service to florists of all kinds, but we also serve landscape contractors, interior landscapers, growers, nurseries, garden centers—the entire horticultural industry.

STARTING TODAY, IT'S A BRAND NEW BALLGAME.

It's a new game, a bigger game, a better game. So we've changed our name. What hasn't changed, of course, is our commitment to meeting and exceeding the needs of each and every one of our customers. And we think you'll agree, that's a winning idea. Call 1-800-851-7740 or visit us on the web at www.fmi-insurance.com.
