Light up your profits

BY CURT HARLER/CONTRIBUTING EDITOR

Landscape lighting can light up your clients’ yards — and your ledger books. Since most people work during the day and relax or party at night, landscape lighting is a logical extension to any landscaping job.

Done correctly — and that doesn’t mean making the front of a house look like a landing strip — landscape lighting can add the touch of class needed to set off a well done setting of lawn, shrubs and trees. “Think of it as painting a picture of the landscape at night, using lights to achieve the look a homeowner wants,” says Richard Lentz, owner of Lentz Landscape, Dallas, TX.

Customers interested in landscape lighting usually come from one of three camps: those who want heightened security around their property, those who want to illuminate a dangerous area such as steps or those trying to make their home and grounds landscaping look as good at night as it does during the day. In many cases, a landscaper can marry all three of the opportunities, giving the customer an even better reason to go ahead with the project.

Before diving headfirst into any job, check the local electrical code on installation. Most permanent lighting systems are installed on a stem or pipe support and have to be mounted to a box. Some local regulations allow mounting below ground, others require above-ground installation. If you are not experienced in this area, take a short course or join forces with an electrician or landscape designer who has done some good-looking projects. Finally, do not fall into the trap of thinking that, just because a job is a low-voltage installation, it can be done in any way you choose. You are still dealing with electricity, people’s property and people’s lives.

ARCHITECTURAL LANDSCAPE LIGHTING
800/854-8277
www.allighting.com

The new SL-30, above-ground diecast aluminum landscape lighting from Architectural Landscape Lighting, Santa Ana, CA, is a multidirectional, contemporary shaped lighting fixture designed to provide brilliant uplighting to illuminate schools, office buildings, signs and other landscape features in many commercial applications. Light sources include standard "continued on page 66"
PAR-38 incandescent spot or flood beam and HIT spot or flood optics. Units are UL/CUL listed for wet location use.

The company also has canister-shaped outdoor downlights suitable for building lobbies, corridors, entryways, exterior building walls adjacent to gardens and parks and parking garages. The lights feature a classic cylindrical, canister-style housing with subtle architectural ring details in each of four models. The smooth outer surface has no visible hardware and a flush-mounted lens. The lens is surrounded by a body-colored trim ring to preserve each unit's crisp design from any viewing angle.
