Husqvarna acquires Bluebird

CHARLOTTE, NC — Husqvarna acquired Bluebird International Inc., a manufacturer of commercial dethatchers, aerators, seeders, sod cutters and other turf care equipment.

“We believe that Bluebird will be an excellent complement to the product line currently offered as a result of the acquisition of Yazoo/Kees last October,” said Bengt Andersson, CEO of Husqvarna Worldwide.

Husqvarna will continue to market the Bluebird brand through existing Bluebird dealers and its distributor network. Terms of the purchase were not revealed.

Simplot adds Lange-Stegmann

BOISE, ID — With an eye on expansion to the East Coast, Simplot Turf & Horticulture acquired the professional product line from St. Louis-based fertilizer formulator Lange-Stegmann. The deal includes the Lange-Stegmann production facilities for its professional products in the golf, landscape and lawn care markets.

“We’re committed to bringing our products and service to the national market,” said Bill Whitacre, president of Simplot Turf and Horticulture.

‘Biocalendar’ helps plan pesticide applications

BY JAMES E. GUYETTE / CONTRIBUTING EDITOR

Landscape managers can help their operations blossom simply by watching the plants grow. Tracking and recording when certain plants bloom can pinpoint the best times to treat for specific insect pests. Dr. Dan Herms, an entomologist at The Ohio State University, has developed what he calls a "biological calendar" that predicts the emergence of tree and shrub pests — and thus the best time to spray — based on when ornamental plants bloom. "By knowing the order that pests occur, managers can plan their pesticide strategies," he says. "The sequence remains remarkably constant from year to year."

The calendar shows, for example, that European pine sawfly eggs hatch at the same time as first bloom in PJM rhododendron, and that gypsy moths hatch at full bloom in Spring Snow crabapple. (Herms' study is specific to his area of Ohio, but similar work has been accomplished in Illinois, Kentucky and Michigan. Check with your local extension office.)

To prepare his study, Herms looked at the blooming times of 86 ornamental plants and matched them with the activity of 40 insects and mites. The result was a list in order of what happens when. It works because the development of plants and insects depends on the temperature, and the order of this development is the same every year. "What you see in one year is going to hold in other years, which is why it's important for you to make these observations while you're applying your own controls."

For instance, Herms found that eastern

Turfco Direct offers fall money-making kit

As all landscape professionals know, marketing is half the battle when trying to increase profits, no matter what the season. Turfco Direct knows that, which is why the company has come out with the "Fall MoneyMaker Kit," a free package of marketing materials to help landscape professionals sell aeration and overseeding services to their customers.

The "Fall MoneyMaker Kit" includes customer brochures, suitable for mailing and/or use as handouts and door hangers, that describe the benefits of both aeration and overseeding. A "plan of action" explains how to use the materials for best results and how to effectively sell these services to new and existing accounts. Also, there are pricing guidelines to help lawn care firms establish profitable pricing for their own area.

For more information about the "Fall MoneyMaker Kit," call Turfco Direct at 800/679-8201 or visit www.turfco.com.
tent caterpillar eggs hatch under particular temperature conditions. The date varied from March 28 in a warm spring to April 4 in a cooler one, but it always coincided with full bloom in Corneliancherry dogwood, which also occurred at the same time.

Other examples are holly leafminers, emerging at full bloom in Amelanchier 'Regent;' and bronze birch borers, appearing when black locust blossoms peak.

Until now, bronze birch borers' emergence has been especially hard to forecast. "We found that it can be accurately predicted simply by watching black locusts bloom along the highway," Herms explains. "When black locusts begin to bloom, that's when you need to make an insecticide application for bronze birch borer."

Timing helps

Good timing is a benefit of the biological calendar, he observes. Instead of relying on the date or a schedule of regular applications, landscape managers can spray when a pest is present — not before or after. Pesticide use is cut, yet control is the same or better. This is especially true for hard-to-detect pests and those susceptible only at certain stages.

The end result is fewer, yet more effective, pesticide applications, according to Herms, who adds that you can create your own biocalendars specific to your climate and business operations.

The biocalendar can benefit an IPM program by making short-lived pesticides such as insecticidal soaps and oils more effective through timely application. Pesticides with longer, residual effect-types might not be needed.

Herms, a professor at the Ohio Agricultural Research and Development Center in Wooster, based his biocalendar on three years of observations in the center's Secrest Arboretum. He is currently preparing a similar biocalendar relating to weed control, which should be ready in three years.

Herms believes you can design a biocalendar with just a year's worth of observations by using existing field techniques. "You're keeping records on the pesticide applications anyway, and you can just add another space on the form to list the plants that are in bloom," Herms explains.

"If your timing is correct (during a specific battle), you can make that same application in following years," for your firm's biocalendar. "Follow-up monitoring is critical."

A division of Rexius Forest By-Products, Inc., Eugene, OR
Becker Underwood acquires MicroBio
AMES, IA — Becker Underwood, Inc. acquired UK-based MicroBio Group Ltd. The acquisition includes the exclusive production and marketing rights of all MicroBio biofertilizers and biopesticides for the professional turf, agriculture and greenhouse markets.

Remember your absentee ballot
INDIANAPOLIS, IN — This year's Green Industry Expo is set for Nov. 3-7 at the Indiana Convention Center. Tuesday, Nov. 7, is election day, so if you're planning to attend the GIE and intend to vote, consider voting by absentee ballot (at least two weeks in advance). You can find out your state's voting requirements by calling your local election official.

Legionnaires outbreak traced to soil
ATLANTA, GA — Two women from Oregon and Washington are believed to have contracted Legionnaires' disease from potting soil in the first such cases ever reported in the U.S. A California man's death from Legionnaires' in May may also have been connected to potting soil, the Centers for Disease Control and Prevention said. Potting soil has previously been blamed for outbreaks in Australia and Japan.

Legionnaires' disease is a form of pneumonia that was discovered after an outbreak that killed 34 people at a 1976 American Legion convention at a Philadelphia hotel.

WASHINGTON — Pesticide activists' attacks on the use of specialty chemicals will become more of a critical issue for professional applicators, predicted Allen James, president of RISE (Responsible Industry for a Sound Environment), at the association's annual meeting here last month.

"The intent is not just to attack our industry, but to destroy it," James said. He named various conflict areas at the local, state and federal levels.

The growing movement to include pesticide use as a key issue in children's health leaves both pesticide producers and applicators vulnerable, James noted. "They have found the one area where we're the most vulnerable."

While the specialty chemical manufacturing industry backs its case with comprehensive research, the movement is having success, especially with regulators, said RISE staffers.

Rampant myths
Fred Langley, RISE manager of state government relations, noted key initiatives to limit or eliminate pesticide use in Massachusetts, California, Wisconsin, Pennsylvania, New York, Minnesota and New Mexico, which either passed or were defeated narrowly.

Expect more pressure or local or statewide pesticide regulation in the future, Langley predicted. The groups are active, networked and at many levels, and industry data means very little to them. "Myths are rampant at those levels," he said.

David Crow, legislative contact for RISE, predicted a dramatic turn for the worst if the Gore-Lieberman party wins the November election. Sen. Barbara Boxer's (D, CA) many efforts to limit pesticides on federal properties will continue, he predicted, along with several other Administration and legislative efforts.

All RISE staffers called for a strong defense of pesticide testing and safety, plus education on the destructive and unhealthy effects of pests.

Commercial mower sales to remain strong, says OPEI
ALEXANDRIA, VA — The Outdoor Power Equipment Institute (OPEI) predicts that while shipments of all consumer product categories will be slightly down in 2001 due to rising mortgage rates and declining housing starts and resales, commercial mower sales will continue to be strong.

For commercial turf equipment, intermediate size walk-behinds were down slightly in 2000 but OPEI predicts an increase in 2001. Commercial riding rotary turf mowers continued their strong growth in 2000, and OPEI says those sales will continue to be strong in 2001.

For the 2000 model year, consumer walk-behinds lost .4% to 5,901,846 units, while all riding units reached 1,662,836 units, a 3.2% increase.
John Deere stores feature new look

DAVENPORT, IA — Bright showroom lighting. Streamlined display shelves. New signage. Colorful interiors. These elements are all part of the new John Deere "superstore" designed to enhance the buying atmosphere for customers.

River Valley Turf, a John Deere dealership for commercial and lawn and garden equipment, was one of the first new "superstores" to be built from the ground up. The idea for the new design, however, was conceived in 1998 as part of the Image 2000 program, which included in-store merchandising plans and specific design instructions.

"We'd like to have all the stores like this, but different areas wouldn't lend themselves well to it," said Randy Davis, manager of retail marketing. "Our dealers are independent, so how each store is made is up to them."

It's no wonder Davis would like to see all stores take on the new, 21st century retail design. Sales are apparently up. "We have noticed considerable sales increases in certain products — particularly handheld ones."

TEMPORARY/SEASONAL LABOR VISAS

We Specialize in Work Permits for the:

- Green Industry
- Construction Industry
- Hotel/Resort Golf Course

Mark your calendars for September/October, 2000 to begin the process for 2001!

Receive work visas for your peak season and have a loyal, productive labor force that you personally choose! Every day you delay shortens the duration of your visa!

Call now for information packet and a quote.

Join us in our sixth year of obtaining and maintaining a legal work force. You can trust that our experience and motivation is sincere and our customer service is unbeatable!

Foley Enterprises

Your labor solution for the millennium and beyond...

Call toll free (888) 623 7285
Austin (512) 282 3237
Fax (512) 282 0958

*Other Industries are also eligible for this type of work permit...call us now to find out if your company is eligible.
Oak tree epidemic spreading in northern California

It first appeared on tanoak in Mill Valley, CA, in 1995, but since then, Sudden Oak Death has been reported from Mendocino to Santa Barbara counties, with Marin, Santa Cruz and Monterey counties showing epidemic levels.

So far, the primary cause of Sudden Oak Death, which has affected tanoaks (Lithocarpus densiflorus), coast live oaks (Quercus agrifolia) and may be spreading to black oaks (Quercus kelloggii), is still unknown. Symptoms include drooping shoots in tanoaks, and bleeding in coast live oaks, black oaks and tanoaks.

Treating Sudden Oak Death is difficult without knowing the primary cause, but the Marin County University of California Cooperative Extension has created a Web site with tips on how to maintain and increase tree health. The site also has the latest information on Sudden Oak Death. Log on at http://cemarin.ucdavis.edu/index2.html

What's in a Name?

- Basic programming includes 3 independent programs, each with 8 start times per day
- New Turbo mode offers additional cycles including even, odd, odd-31 and 1-6 day programs
- Easy to program
- New indicator on field transmitter LCD screen warns when battery is low
- Waterproof case allows operation even if submerged

UNIK is now TBOS... with Improved Features for Added Flexibility.

No Power. No Problem.

See your local distributor and ask for a demonstration of the new TBOS system. Or visit our website at www.rainbird.com for more information.
