New Hampshire landcapers partner with a developer to restore elegance to a grand old hotel

BY RON HALL/EDITOR-IN-CHIEF

Kevin Craffey knew he had a job on his hands in bringing the century-old Mountain View Grand Hotel back to life. The historic hotel in Whitefield, NH, had been vacant since 1986. It had started to fall apart. So had its landscape.

The problem: start from scratch

"The landscape was gone," says the owner of Craffey & Company, a general contracting firm based in Hanover, MA. He bought the resort hotel in 1998 with visions that he and his crew could recondition it and reopen it again in a few months.

Now, after three years of hard work and intense and complicated political and financial deal making, Craffey's dream project is almost done. The restored hotel will welcome guests again this May.

Key to its continuing success as a resort destination, feels the owner, is its landscape that, in spite of being new, had to complement the hotel, surrounded by mountains and overlooking 5,000 acres of unspoiled New England countryside.

The solution: hire local experts

Fortunately, Craffey could count on a pair of local professionals to design and build the "natural" landscape that the site demanded. Roger Petit and Mark Sullivan, partners in R&M Naturescape Designs LLC, brought unique skills to the project.

"He (Craffey) wanted whatever we did to have a natural feel to it," says Sullivan. That request perfectly suited the company's expertise, which included the design of habitats and trails, too.

R&M Naturescape's collaboration with Craffey resulted in a landscape that blends two acres of new turf, 250 tons of dry-laid granite, gardens containing almost 100 varieties of annuals, perennials and spring-flowering bulbs and the landscape's signature water features.

Challenges? There were plenty.

Often, landscape crews worked at the same time and in the same areas as tradesmen refurbishing the hotel's exterior, a scheduling nightmare. "Usually, we were working on three or four projects at once, but we tried to plan ahead so that we were always busy somewhere on the site," says Sullivan.

Another challenge was the presence of a stone ledge running the length of the site, and where Sullivan had designed prominent water features. "The ledge ultimately determined where a lot of features were going to go," says Sullivan with a laugh.
Realizing that winters come early in New England, R&M Naturscape pregerminated grass seed in 55-gallon plastic drums prior to hydroseeding the lawn at the Mountain View Grand Hotel. Roger Petite and his R&M Naturscape crew put the germinated seed down during the 2001 Labor Day weekend. He used a 300-gallon Turbo Turf hydroseeding unit rented from Dayton Supply in Maine.

Mark Sullivan, one of the partners in R&M Naturscape, said that he learned how to pregerminate seed by visiting the Web site wyy.tur.bc Jrf.com. “It provided me with a lot of great information,” he said. The company used a mixture of Kentucky bluegrass, perennial ryegrass and fescue seed (Catamont Supreme Mix from the Oliver Seed Co., Vermont) on the hotel site.

The landscape company, which employed as many as 16 workers during peak construction last summer, will be putting in finishing details and establishing gardens at the hotel until early July. Sullivan says that R&M Naturscape will seek to professionally maintain the property, too. But no firm decision has been made about that, and Craffey says he may opt for in-house maintenance. L.M.
