NW Turf Meet, Sept. 22-24, Studies Winter Damage

“Winter Damage and Disease Control Problems” headline the Northwest Turfgrass Association’s Sept. 22-24 conference at the Hayden Lake Golf and Country Club, Hayden Lake, Idaho. James Beard, Michigan State University, and Dr. V. C. Brink, University of British Columbia, head the speakers roster with their talks on ice and winter damage to turfgrass.

Conference chairman Dr. Roy L Goss, Extension Specialist in Agronomy at the Western Washington Experiment Station, summarizes current research at his station, including weed control and “What Happens to Fertilizer Elements After They Have Been Applied to Turf.” Alvin G. Law, Washington State University, views poa annua control and Dr. C. J. Gould, WSU plant pathologist, discusses disease control problems.

Other speakers and their topics include Ken Morrison, Washington Extension Agronomist, on bluegrass varieties; Jack Daniels of the Washington Association of Ground Sprayers, on “Control of Insects and Diseases in Ornamental and Shade Trees”; and Bill Bengeyfield from the U. S. Golf Course Association Green Section, Garden Grove, Calif., on “Are You a Good Boss?”

Reservations for the conference are available from Goss at the Western Washington Experiment Station, c/o Washington State University, Puyallup, Wash. 98371.

“Water” FT-GA Conference Theme, Oct. 5-7

With drought and near-drought conditions in South Florida and many other areas of the nation, “Water” is a timely theme for the 500 turf professionals expected for the 13th annual Florida Turf-Grass Management Conference, Oct. 5-7, at the Ramada Inn, Gainesville. The “Water” theme, of continuing interest to turfmen, will be explored by speakers discussing water resources in Florida, soil and water relationships, water functions and requirements, and relationships of water and turf disorders to insects, nematodes, diseases, and fertilizers.

Many out-of-state experts have been invited to join two dozen Florida turf professionals and researchers as speakers. Roger Thomas of Jacobsen Manufacturing Co., will discuss “Preventive Equipment Maintenance”; turf consultant O. J. Noer, speaks on “Diagnosing Problems on Golf Courses”; and James Watson of the Toro Manufacturing Co., describes “Soil and Water Relationships.”

“Equipment for Turf Maintenance” is theme for the Industry Hour when exhibiting firms outline the latest developments and improvements in turf equipment currently on the market.

Elections and a business meeting follow the Industry Hour. Outgoing officers of the Association are Gene C. Nutter, president; James L. Blackledge, vice president; and L. N. Clark secretary-treasurer. All three are completing their second term.

Directors retiring from the Board are William O. Ballantine, Charles P. Johnson, and Berrian W. Rouse.

FT-GA members will vote on changes in the association’s by-laws recently recommended by the Board of Directors. These changes are designed to expand representation for Florida turf interests by adding five members to the Board of Directors.

Professional Management Workshops continue the “Water” theme as participants break into four concurrent sections to study items of particular interest: “Golf,” “Industrial Sites, Athletic Fields, Parks, Cemeteries, and Sod Growing,” “Horticultural Spraying and Lawn Service,” and “Retail Dealers and Garden Supply.” Each section features topics about irrigation systems and equipment of particular value to that field.

Research tours to turf projects conclude the conference being coordinated by Dr. G. C. Horn, associate turf technologist at the University of Florida, and Walter Anderson, FT-GA Executive Secretary. Anderson has information about registration and accommodations, and can be reached at 4065 University Blvd. North, Jacksonville, Fla. 32211.
Classifieds

When answering ads where box number only is given, please address as follows: Box number, c/o Weeds and Turf, 1900 Euclid Avenue, Cleveland, Ohio 44115.

Rates: "Position Wanted" 5c per word, minimum $2.00. All other classifications, 10c per word, minimum $2.00. All classified ads must be received by Publisher the 10th of the month preceding publication date and be accompanied by cash or money order covering full payment.

HELP WANTED

AGRONOMIST or Entomologist, experienced in turf management and weed control, to oversee technical, R&D, and training programs for fast-growing Florida firm. Salary open. Send résumé to Box 10, Weeds Trees and Turf magazine.

FOR SALE

CUSTOM SPRAY BUSINESS. Two (2) rigs, complete with hoses, guns, etc. One rig equipped with booms for field work. Both rigs mounted on trucks, run from power take-off. Austin James, 321 South 12th St., Payette, Idaho.

Over-watering Yellows Leaves

Yellow-tipped shrubbery in mid or late summer may indicate too much water rather than too little, according to Douglas Bryant, New Mexico State University extension horticulturist. A yellow tinge on leaves can mean poor drainage, high soil alkali content, or over-irrigation. He advises that soil around large plants should be soaked to a depth of 8 to 12 inches every five to seven days and in some cases only every 10 days.

Frequent sprinkling is not a good practice, he notes, since it causes shallow rooting and the growth of feeder roots near the surface. Trees in sandy or light soils should be watered more often, he adds.

Shrubs are heavy users of water in early summer, but later their moisture requirements drop.

Offers Tree Pruner Cords

Seymour Smith and Sons has introduced a 100% polypropylene cord to replace worn ropes on long reach tree pruners. Lightweight, the bright orange cord comes in 1&V2 foot hanks in a rope diameter sized to fit all tree pruners.

Seymour Smith and Sons, Inc., Oakville, Conn. has details.

Keep Your Weeds Trees and Turf magazines In specially designed Permanent Binders

Helps You Keep 24 Full Issues of Weeds Trees and Turf In One Neat Package

○ Keeps back numbers handy for quick reference
○ Protects issues from needless damage. Holds 24 issues.
○ Gives your bookshelf a neat appearance

Magazines can be inserted as they are received—Still Just $3.25

Please send check or money order to WEEDS TREES AND TURF 1900 Euclid Ave. Cleveland, Ohio 44115
The Road to Better Weed Control . . .

leads the vegetation maintenance professional to the monthly pages of WEEDS TREES AND TURF, the national how-to-do-it magazine which helps weed and brush controllers do a better job. Included each month also are tips for more efficient turf management, and valuable aids to better tree service. If you aren't receiving WTT every month, or if you have to borrow a copy from one of your colleagues, fill in the handy coupon below. For $8 a year or $5 for two, you can be sure to receive the award-winning magazine which thousands turn to each month for vegetation maintenance tips!

WEEDS TREES AND TURF, September, 1965
Miles Takes Minn. Post

Neil W. Miles has been named extension horticulturist at the University of Minnesota, St. Paul. Agricultural extension programs related to the use of pesticides for control of insects and diseases on horticultural crops come under his control.

Miles earned B.S., M.S., and Ph.D. degrees in horticulture at Minnesota, where he also worked as an assistant in extension programs while doing graduate work.

USDA Registers Mirex Bait

Mirex 450 pelleted bait has been registered for control of the Texas leaf-cutting ant by the U. S. Department of Agriculture. Allied Chemical Corp.'s General Chemical Division developed Mirex 450 in cooperation with USDA's Forest Service. Field tests have proved 100% effective in eliminating both small and large nests, Allied reports.

The bait can be used to control harvester and fire ants, relatives of the Texas leaf-cutters, Allied adds. Since Mirex 450's toxic effects are delayed, larger ant populations can be reached. More news on the pelleted baits is available from Allied Chemical Corp., 40 Rector St., New York, N. Y. 10006.

Releases Residue Analysis

Kensington Scientific has prepared a free bulletin on materials, apparatus, and accessories useful in clean-up and detection of pesticides in residue analysis. The 20-page brochure describes materials for detection by thin layer, paper, and gas chromatography. It also contains selected references.

Bulletin #130 is available free from Kensington Scientific, 1165 67th St., Oakland, Calif. 94608.

Grants $500 for Turf Study

With a recent $500 grant from the Massachusetts Turf and Lawn Grass Council, the University of Massachusetts will further its turf research work. Dr. Joseph Troll, chairman of the Council's advisory board and a member of the University's plant and soil sciences department will administer the project.

Editor retires. Dr. C. J. Willard, longtime editor of Weeds, technical publication of the Weed Society of America, retires in December. A committee comprised of Dr. R. Behrens, University of Minnesota; Dr. F. L. Timmons, University of Wyoming; and Dr. R. A. Fossee, Amchem Products, Vermont, is attempting to find a successor. I'll be difficult to find as devoted and capable an editorial director as Dr. Willard who makes his office on the campus of Ohio State University in Columbus.

Harder airs. Frank Harder, president of the Harder Arborist Supply Co., Hempstead, N.Y. recently was interviewed by Ruth Alampi on her WNBC (New York city) radio program, "Around Your Home and Garden." He spoke on pest control and lawn care, a subject he's become an expert on through actual in-field experience since graduating from Purdue's Ag School.

AAN award. Dr. F. L. S. O'Rourke, professor emeritus in Michigan State University's horticulture department has received the Norman Jay Coleman Award for his outstanding contribution to horticulture research. The award, made yearly by the American Association of Nurseryman, cites O'Rourke's work over the past 25 years in projects dealing with various aspects of plant propagation and nursery stock production.

In all modesty. Denver Loupe, public relations committee chairman for the 1966 Southern Weed Conference, writes their Jan. 18-20 meeting at Hotel Robert Meyer in Jacksonville, Fla., will be the weed control affair of the South next year. A big attendance is expected.
Geigy now offers you five industrial herbicides.

All five Geigy industrial herbicides deliver long-lasting residual control of annual and perennial weeds. With once-a-year application, too. Yet, each one has special features to solve specific problems. As a group, they'll handle just about any weed problem you encounter. On level land, or slopes. In and along paths, drives, lots, and roads. Around buildings, signs, markers, fences, and poles. Everywhere weeds are not wanted.

**ATRAZINE 80W.** Wettable powder. For spray application before or soon after weeds emerge.

**SIMAZINE 80W.** Wettable powder. For spray application before weeds emerge.

**PROMETONE 25E.** Emulsifiable solution. For spray application on established weeds.

**ATRA-BOR™ 8P.** Pellets. Contains Atrazine. For dry application where sprays are impractical.

**PRAMITOL 5P.** Pellets. Combination of Prometone and chlorate-borate. Especially effective against deep-rooted perennials.

May we send you fully descriptive literature on any or all of our herbicides? Just write.

Geigy Agricultural Chemicals, Division of Geigy Chemical Corporation, Saw Mill River Road, Ardsley, New York.
