Remember the famous old Turf King?

Just like the rest of us Jacobsen Distributors, Al Van Pelt of the Boyd Martin Company in Salt Lake City, Utah has fond memories of the 76" and 84" Turf Kings.

They were workhorse mowers in the turf world. But now they've become a memory with the introduction of the new, improved 1974 models.

First off, they've been completely redesigned. Look at the sharp styling. It's your first hint of all new features that are aimed at making the old leaders the new leaders.

The variable speed drive has been replaced with a hydrostatic drive that's better. The transport speed has been increased to over 8 MPH.

The old handle bars are gone. You'll find a sleek new steering wheel instead because it makes turning easier and offers more control.

The rope starter has been replaced by recoil starting right from the driver's seat. Speaking of the driver's seat, you'll notice it's now high-backed for firmer support. And it's even more comfortable. The gas tank is bigger for fewer fuel stops.

There are some things that were too good to change, so we didn't.

The Turf Kings can still cut their way through 30 acres in a day. With beautiful results. The mowers are fully articulated to follow the dips and slopes of uneven ground.

And the constant speed reels put a consistently fine and smooth finish to any turf.

You'd better talk to your Jacobsen Distributor about these new three-reelers. A simple demonstration will make you forget all about any second best equipment.

Even our old Turf Kings.

Your Jacobsen Distributors.
Before we sell it, we buy it.

For the name of the distributor near you write: Jacobsen Turf Distributor Directory, 1721 Packard Avenue, Racine, Wisconsin 53403.
Dacthal drives 20 annual weeds off the course with one easy swing.

One application early in the spring. That's all it takes. Dacthal preemergence herbicide prevents 20 annual weeds from sprouting all season long. Problem weeds like carpetweed, chickweed, purslane and others. So you can devote time and manpower to more important work.

Dacthal doesn't stop there. It also drives out troublesome crabgrass and Poa annua. Hit 'em in the spring. And follow through with Dacthal in late summer for control of Poa annua and other late-germinating weeds.

Over the years, Dacthal has proven to be the closest thing to worry-free weed control. It won't harm new grass when used as directed. Won't leach out with frequent waterings. And there's no problem of residue buildup in the soil.

Dacthal degrades, naturally, in one season. Just read and follow label directions. You can even use Dacthal to keep the weeds out of flowers and shrubs. It's cleared for use on over 120 ornamentals. That's one more beauty of it.

This year, drive out weeds with Dacthal... the all-around favorite preemergence herbicide. Available in wettable powder or granules. Ask your supplier for more information or write: Agricultural Chemicals Division, Diamond Shamrock Chemical Company, 1100 Superior Avenue, Cleveland OH 44114.
THE COVER—Many services provided by a tree care firm require close contact with the tree. The best way to get close to a tree is to climb it. Here, Larry Holkenborg, Sandusky, Ohio, climbs a walnut tree with the assistance of a couple of his employees.

TORRANCE RECOVERS From Pine Tip Moth — Residents of Torrance, Calif., become aware of the beauty and importance of their street-side trees when an infestation of pine tip moth threatens the trees' health. Robert Schrauben, city tree supervisor, works to rid the community of this pest.

DED CONTROLS: WILL SYSTEMICS WORK? — Richard Campana takes an historic look at Dutch Elm disease and reviews the role of the fungicide benomyl in its control.

BUCKET RESCUE — A real "how-to" article on the basics of single-man aerial lift rescue. Robert Jones, of Commonwealth Edison Co., provides the illustrations and words for highly interesting reading.

SHADE TREES FOR CITIES — Community and urban forestry are here to stay. A couple of pros outline steps for developing a forestry program that combines beauty with utility.

JOB PERFORMANCE FROM YOUR EMPLOYEES — Competent supervision, authority, peer relationships, attitudes, etc. They're all part of the psychology of effectively managing your workers. Wallace Mitcheltree takes an objective look at the roles and relationships of the employer and his employees.

Single Copy Price: $1.00 for current and all back issues. Foreign $1.50. Subscription Rates: WEEDS TREES AND TURF is mailed free, within the U.S. and possessions and Canada, to qualified persons engaged in the vegetation care industry and related fields in controlled circulation categories. Non-qualified subscriptions in the U.S. and Canada are $10.00 per year; other countries, $12.00 per year. Controlled circulation postage paid at Foxtail, Ohio 44830.
Lift trucks, backed by innovative engineering and quality control, assure you of extra years of satisfactory service performance. Both Forestry and General Service bodies are on regular production schedules. LR Series Models come in 40-, 42-, 45- and 50-feet. All booms are fully insulated and operated by a high pressure hydraulic system with controls mounted on the Pylon Mast and in the basket for maximum safety and efficiency. When you invest in one or a fleet of our aerial lift trucks, you are assured of good service from the aerial device and from the people who build it. ASPLUNDH CHIPPER CO., a division of Asplundh Tree Expert Co., 50 E. Hamilton St., Chalfont, Pa. 18914.

The famous Asplundh chipper is available with all our aerial device units if so desired. 12 inch or 16 inch models are in continuous production.

Editorial

In a quiet sort of way, we signaled the Green Industry in December 1972 that noise control and abatement would be under increasing government scrutiny in the months ahead. Excessive noise levels are being charged against poor job performance, lack of incentive, and hearing disabilities both temporary and permanent. Congress in an effort to right the wrong has turned the matter over to the Occupational Safety and Health Administration.

Most people in our type of business have little appreciation of what constitutes excessive noise levels. We know that a chipper operating at full throttle produces quite a whine. Or a chain saw buzzing through a tree limb can put a temporary ring in the ears. But, even though hearing may be temporarily impaired, within a few hours we can hear adequately.

Not so, says the government. And to make their point stick, they’ve come up with charts, diagrams, graphs and other supporting data. One of the charts with which Green Industry businesses will undoubtedly become familiar is Table G-16 — Permissible Noise Exposure. Simply stated, the chart limits workers to a maximum 90 decibels of sound in an 8 hour day.

More on this chart and the impact of noise control can be found in the article by Robert R. Herder, vice president, Asplundh Tree Expert Co. in this issue.

The noise issue is particularly challenging to manufacturers of noise producing equipment. Several leading manufacturers have reported producing equipment whose engines could be muffled well below the noise level, but whose chain or cutting mechanism remained above the acceptable tolerance. Further, just because a piece of equipment meets the noise requirements, doesn’t mean that it will always be this way. Noise exposures have been made on new equipment operating under ideal conditions. You can bet your stump cutter that an older chipper or chain saw will produce more noise than a new one. When the OSHA inspector tests your equipment he’ll cite you for excessive noise.

If you haven’t bothered up to now to provide hearing protection devices for workers, do so immediately. In addition, exercise administrative controls over the labor force. Rotate workers away from noise producing equipment.

Lastly, the place where you can exert a little noise is in Washington. Legislators react first to the loudest squeeking wheel. A few letters, phone calls and thoughts expressed about the Green Industry will assure a substantial footing for your business in the future.

WHEN WEEDS and ALGAE MAKE LIFE MISERABLE...

it's time you found the Mariner Aquatic Herbicide and Algicide Products

For information on this new and growing line of 3M aquatic weed and algae control products, write: Plant Care Systems, 3M Company, 3M Center, P.O. Box 30050, St. Paul, Minn. 55101. Or call 305/943-0481.
Get rid of unwanted green growth before it cuts into your profits.

The weed onslaught is just about universal.
An expensive headache.
For utilities, railroads, highway departments, the petroleum industry and industry in general.
But there is a way to control that costly green tide—with Tandex® herbicide.
It's a urea-carbamate compound that gives outstanding extended control over a range of weeds and grasses.
But it's more than weed control.

It's brush control, too. If you've got to get rid of really tough brush and woody vines, Tandex gets the job done.
You can spray Tandex or apply it in dry granular form.
Either way you use it, you'll control that costly green tide.

Agricultural Chemical Division
FMC Corporation, Middleport, N.Y.

A perfect pair: The versatile STIHL 08S big power chain saw and the handy new, lightweight STIHL FS-08 Brush Cutter. The same high performance engine powers them both. The FS-08 Brush Cutter does a real professional job in tough weeds, stubborn shrubs and small trees when using either the blade with rotating knives or circular saw. This brush cutter features STIHL's famous AV anti-vibration system that absorbs fatiguing engine vibrations. Lets you cut longer and easier with less effort.

Ask your rental friends or your nearest dealer about STIHL’s better performance, lower maintenance & down-time and proven earning capacity.

Choose 43, 50 or 62 horses with John Deere Turf Tractors

Roadside mowing, right-of-way finishing and maintenance, shoulder and median detail—John Deere can match your requirements job-for-tractor. Three horsepower classes answer the great range of work demands, and each engine is provided in gasoline or diesel versions. In every machine, you get a constant-mesh transmission with park lock and eight speeds forward, four reverse. Inboard, wet-disk, self-adjusting brakes are also standard, along with inboard planetary final drives that share filtered lubrication with the transmission. Low-profile design for full operator vision and stability, and ROPS are basic, too.

For details on PTO, tread width, and more than 20 other tractor options and equipment choices, see your dealer, listed in the Yellow Pages. He’s your source for finance information, too. John Deere, Moline, Illinois.
THREE IN ONE

I have read the very excellent article on Page 16 in the March issue of WEEDS TREES AND TURF entitled “Gypsy Moth Threat to the Midwest”.

Also on Page 16 you had a brief notation entitled “What is BT?”. While you have properly described BT I think you should have mentioned there are currently three (3) product brands registered for commercial use. These are Dipel, Thuricide, and Biotrol XK. Thuricide is a product of Sandoz-Wander, Inc. and Biotrol is a product of Nutrilite Products, Inc. which is marketed nationally by Thompson-Hayward Chemical Company.

Both Thuricide and Biotrol were in the marketplace prior to the introduction of Dipel. The omission of all of the products in the field might prove confusing to those people we have been communicating with prior to this article. Bob DeCicco, Manager Marketing Services, Thompson-Hayward Chemical Company.

NAME REQUESTED

In an article as a sidebar to “Bent on Better Fairways” in the January, 1974 issue of W.T. & T. it is stated, “Bermudagrass greens constructed according to U.S.G.A. Green Section specifications can easily be converted to bentgrass with a herbicide treatment . . .” Either the writer has his tongue in cheek, or he is referring to a more co-operative type of Bermudagrass than that which has invaded western Oregon from our southern neighbor. If there is a chemical that will do this job, I would like to know it’s name.

Thank you for your very fine magazine which in its month to month editions is “right on.” Ken Purkey, Turf Foreman, City of Eugene Park Department, Eugene, Oregon.

ANSWERED

I believe the reference to chemical inhibition of bermuda in greens converted to bent appeared in material released by Dr. Richard Duble of Texas A & M University.

The DuPont herbicide Tupersan (Siduron) does indeed prevent germination of bermuda seed and encroachment from fairways and aprons, according to a number of experiences (involving conversion of greens to Penncrest) reported on in detail in the Nov., 1971 USGA Greens Section Journal. The cases cited in this report come from tests and practical usage on courses in the Carolinas and Georgia.

Texas A & M has done similar work, I believe, and information might possibly be available from Dr. Duble at the Dept. of Crops & Soils; College Station, Tex. 77843.

I heard about Tupersan 3 or 4 years ago. But I never heard of bermudagrass in Oregon until you relayed this letter. Live and learn . . .

Hal G. Dickey, vice president, Siddall Assoc. Advertising.

NOXIOUS WEED ACT NOXIOUS

I have been wanting to express my “great disagreement” with the editorial which appeared in the February 1974 issue of the Weeds Trees and Turf magazine in regards to the noxious weed law . . .

In essence, my basic disagreement is not in the fact that we need a noxious weed law and that there are several noxious weeds that should be controlled for the good of humanity, motherhood, childrenhood, etc., etc., but the manner in which the law is put forth is completely unfair in my opinion. If you will read close you will see that the proposal is to allow the Secretary of Agriculture, in this (continued on page 12)
