Roundup® belongs in your turf renovation program.

Renovation of a weedy fairway, sod farm or other grassy area used to be a laborious and time-consuming chore, but not any more.

Not with Roundup® herbicide by Monsanto. Because one application of Roundup will control many annual and perennial weeds, yet allow you to proceed with tillage and planting operations as soon as seven days later.

Roundup also makes sense wherever treatments for grounds maintenance are called for. One man with Roundup in a backpack sprayer can replace many of the herbicides and frequent repeat treatments that are often necessary.

Roundup has no residual soil activity. That's why you can go in seven days later and re-plant. Roundup won't wash, leach or volatize from the treated area to injure desirable vegetation. Naturally, normal precautions should be observed to avoid spray drift.

Roundup gets to the root of the problem.

Including many of your toughest vegetation problems, like: bluegrass, bermudagrass, quackgrass, bindweed, johnsongrass, fescue and vaseygrass.

Can you afford to let another season go by without Roundup in your turf renovation and grounds maintenance programs? Your local chemical dealer is the one to see for your supply of Roundup herbicide.

"Translocation" is the key.

Roundup is applied to the weed foliage, absorbed through the leaf surface, and "translocated" throughout the entire plant. In this way, Roundup destroys the entire weed, including the roots or rhizomes.

There's never been a herbicide like this before.
What can a hole in the ground do?

When your grounds become hard-packed from constant use and temperature changes, or if the ground is naturally hard, grass has a tough time growing.

The answer is aeration.

These holes allow air, water and fertilizer to penetrate to the root zone where they're needed. They relieve compaction, giving grass room to grow. New, more drought-resistant roots are stimulated. And the turf takes on a springy, soft feel.

Ryan makes two pieces of equipment specifically for aeration of parks, athletic fields, playgrounds, golf course fairways, or any large turf area.

The Ryan Renovaire® is designed to contour aerate compacted turf on hilly as well as flat areas. Its 12 tine wheels are mounted in pairs, operating independently to give both high and low spots equal penetration.

The Ryan Tracaire® is used to aerate large level areas, especially athletic fields. Mounted by a 3-point hitch, it gets the job done quickly, easily, efficiently.

Both the Renovaire and the Tracaire can be equipped with coring, slicing or open spoon tines for aerating all types of soil in all seasons. Both can be used with a 12-foot-wide dragmat to break-up cores and groom the grass. And both are built to last, like all Ryan equipment.

Give your large turf areas room to breathe with the Ryan Renovaire and Tracaire aerators. You'll see the green, healthy difference a few simple holes can make.

Write for your free Ryan catalog today.

Ryan Aerators.
The turfman's timesaver.
MAN'S CONQUEST OF THE MOON WAS, WITHOUT DOUBT, A GREATER ACHIEVEMENT THAN THE DEVELOPMENT OF AN OUTSTANDING BLUEGRASS, BUT...

For Turf Professionals and Home Gardeners,

Adelphi
KENTUCKY BLUEGRASS
(U.S. Plant Patent No. 3150)

is, truly...a "GIANT STEP" IN TURF

RATED OUTSTANDING FOR OVERALL PERFORMANCE...in actual use...BY PEOPLE WHO KNOW AND GROW GREAT GRASS.

Put into proper perspective, many of man's achievements are "giant steps"...none as dramatic as the conquest of the moon and space.

In the world of turf, "ADELPHI" Kentucky Bluegrass is the giant step of the decade. Its rich, darker green color, its excellent density, its good resistance to disease...have been bred right into it by man. Its acceptance has been virtually universal. "ADELPHI"...on golf courses, athletic fields and on beautiful lawns everywhere.

ISN'T IT TIME YOU TOOK THE GIANT STEP IN TURF? ...TO ADELPHI.

Turf playability: it's your responsibility. When it's right, you know it. When it's wrong, everyone seems to know it. When a piece of you is on the line, you don't want to leave anything to chance. You want the dependability of proven programs and products: products that set the standard by which others are often compared—products like Acti-dione® turf fungicides. They've set an industry standard during their more than 20 years of continuous use without evidence of fungus resistance. And today, Acti-dione acceptance continues to grow. That's got to be proof of reliability. Shouldn't you, too, join the growing rank of professionals who rely on the standard, Acti-dione turf fungicides?
The cool, humid weather that encourages the development and growth of dollarspot, leafspot and melting-out in the spring also encourages their spread in the fall. Regular applications of Acti-dione TGF® on tees, greens, and fairways control diseases that are potential problems in autumn.

Pink and Gray Snow Mold organisms thrive under winter weather conditions. Control these diseases with Acti-dione® Thiram. Spray just before the first permanent snow cover and through the winter as thaw allows.

Fungi never have an off-season. They’re active year-round. That’s why it requires a Four-Season Disease Control Program to keep turf looking beautiful. Build your program around Acti-dione fungicides. They’re the standard no matter what season you’re in.
ORTHENE® Tree and Ornamental Spray has got to be the best insecticide news to sprayers, nurserymen, landscapers and outdoor maintenance people in the last 20 years. It kills many different common insect species, including gypsy moth larvae.

ORTHENE penetrates plant tissue for continuing local systemic action, controlling damaging pests by contact and as they feed on the plant. Because it’s absorbed rapidly, there’s little chance of losing the chemical to rain. ORTHENE is registered for gypsy moth larvae, bagworms, spring and fall cankerworms on trees and shrubs, California oak moth larvae on oak trees, thrips and aphids on labeled floral crops.

ORTHENE’s oral and dermal mammalian toxicity is low (lower than methyl parathion, for example), so it poses significantly reduced hazard, when compared with other insecticides used for the same purpose, to man and the environment. In fact, applicators and field workers can re-enter the fields or greenhouses as soon as the spray deposit has dried. However, ORTHENE must be handled carefully and applied only according to label directions and precautions.

For more information about this remarkable chemical please fill out and mail us the attached coupon.

Avoid accidents:
For safety, read the entire label including cautions and warnings. Use all chemicals only as directed.

ORTHENE — WINNING THE WAR AGAINST INSECTS

**My question or comment is . . .**

*Weeds Trees and Turf* is glad to answer your questions or publish your comments on any green industry topic. Questions will be answered by industry experts in the Vegetation Management or Proscape columns. Comments will appear in the Letters or Viewpoint columns. Mail this postpaid card today.
When we decided last summer to explore the various markets of the Green Industry and publish our findings this year, we didn't realize the significance of what the profiles might uncover. We do now.

We stumbled upon areas of great potential, such as design/build in landscaping, revegetation in mine reclamation, interior landscaping, hydraulic seeding and mulching for erosion control, lawn care, and containerization in the nursery industry.

This month we report on the area of athletic field management. I am amazed at how many people are involved in the field and at the potential that exists, if they were only organized.

Grounds managers for parks are organized to a degree. As Dr. Roy Goss of Washington State University pointed out in the Letters section of the May issue, park administrators are relatively organized, but maintenance supervisors are not. Goss encouraged maintenance supervisors of parks to get organized and ask for help. It's there for the asking.

Public school and municipal managers of grounds appear even less organized. They have not convinced taxpayers of the need for proper maintenance of turf areas. Or perhaps more accurately, they have not sold the school boards and government councils that money should be spent for care of grounds other than mowing.

These government bodies can be sold. Contra Costa Landscaping Inc. in Martinez, Ca., has proven it (see profile in April issue). Ken Gerlack at Contra Costa first studies the individual school district for the proper contact, and then approaches that contact with evidence that proper grounds care goes beyond mowing.

For small school districts, a maintenance contract with a reputable contractor will provide the best results for the money spent. For larger districts, one individual trained in agronomy should be placed in charge of maintenance for the whole system. Leaving the care of acres of public real estate up to the janitorial staff or to a seasonal physical education teacher makes no sense to me.

Often, the decision making of turf care is given to a committee that meets once a month. Their decision is carried out by individuals basically untrained in turf care.

There is a strong case here for organization of individuals trained in turf care to manage the millions of acres of public grounds in the U.S. School districts should structure their maintenance programs such that one person can keep abreast with the latest technology in turf care and implement it for the public good.

These individuals should organize an association just for their needs and compile technical information to be used. It's easy to say but hard to do, right?

Nevertheless, Weeds Trees & Turf is going to make an attempt to locate skilled turf managers in public positions and encourage them to organize. We will also try to serve their needs better with technical information and industry data. We want to support them in their efforts to obtain adequate budgets for turf care of public grounds. WTT

---

**VIEWPOINT**
Bruce F. Shank, Editor

When a design/build is done properly, it can have wide appeal. The design is usually developed by a landscape architect who then hires a contractor to build it. The owner of the property can be assured that it will be done properly.

---

**HERBI's C.D.A.**

What does it mean for you?...better, cheaper, easier weed control along fences, roadways, around buildings and structures.

The HERBI gives Controlled Droplet Application,...a revolutionary approach to the application of herbicides. Its spinning disc produces a consistent 250 micron droplet, meaning ultra low volume spraying, eliminating the need for high volumes of water. Gives exact and thorough coverage, with less chemical! Startlingly economical in cost and use.
