“I could sure use a rugged mid-sized rotary that really maneuvers.”
A lot of our customers have been wanting a mid-sized mower that’s built tough to take it, and that’s highly maneuverable at the same time. So our engineers came up with the amazing Turfcat.

It’s amazing because it’s absolutely packed with features that help you get your medium-sized mowing jobs done faster and better than ever.

First, you have a choice of a 50" or 60" deck. (They’re interchangeable.) Fully articulated, they closely follow ground contours so you get a smooth, even cut with practically no scalping.

Deck design lets you trim close, and also gives super clipping dispersion. The deck raises and lowers hydraulically for curb climbing and transport. And you can adjust cutting height from 1" to 4”.

Then, the three-wheel, wide track design gives the Turfcat great stability on slopes. And the foot-operated hydrostatic drive lets you steer and maneuver while changing speeds or going from forward to reverse.

How about hill climbing? It’s a breeze with the power delivered by the husky 18-HP Kohler overhead valve engine. And you can expect a long engine life filled with good fuel economy.

Plus, the Turfcat is quiet. All controls are within easy reach. And it might very well be the most comfortable riding rotary in the world.

Ask your Jacobsen distributor for a Turfcat demonstration. And have him explain about the many fine features that customers want.

The more you listen to what he has to say, the more you’ll know we’ve been listening.
ARBOTECT 20-S
The strongest Dutch elm disease protection you can give a tree.

ARBOTECT 20-S fungicide helps make it possible to save many elm trees that otherwise would be lost.

Injected into the trunk of the tree, ARBOTECT builds a barrier against Dutch elm disease inside the tree itself. It helps prevent the disease in healthy elms, and can often save infected trees if they are treated early enough.

Used along with sanitation, insect control, and root graft elimination, ARBOTECT can significantly improve the effectiveness of a Dutch elm disease control program.

ARBOTECT differs from other elm fungicides in several important ways:

• It is registered at rates high enough to be effective.

• It is concentrated, requiring much less water for injection, so trees can be treated much faster.

• Thiabendazole, the unique active ingredient in ARBOTECT, is highly effective against Ceratocystis ulmi, the fungus that causes Dutch elm disease.

• Even though it is more effective and convenient, ARBOTECT costs about the same to use as other elm fungicides.

This year, put ARBOTECT to work in your disease control program. It's the strongest protection you can give an elm against Dutch elm disease.

Arbotect
Strong protection for elms.

### GREEN INDUSTRY NEWS

Urban Forestry Suspected as Intrusion to Arborists . . . Velsicol Hires Ex-EPA Enforcement Official as Vice President . . . Toro to Make Three Million Dollar Investment in Irrigation.

### FEATURES

**Symptoms and Conditions of Environmental Tree Disease**
Dr. Eugene Van Arsdel of Texas A&M offers keys to diagnosing tree problems caused by construction, drainage, compaction, and irrigation.

**Diagnosing and Correcting Tree Root Disorders**
Root strangulation, surface roots, and girdling are all covered in this in-depth article by Michael Walterscheid, forestry specialist for the Texas Agricultural Extension Service.

**Equipment Repair Part Inventory Recommendations**
How to make equipment repair parts a useful tool to the user and manufacturer. A list of suggested parts to stock for engines, turf machines, and irrigation systems.

**How To Answer Questions About Aquatic Herbicides**
James Schmidt, chief biologist of Applied Biochemists provides answers to common questions about aquatic herbicides.

**Drought Stress, Not Anthracnose Scourge of Poa Annua**
Dr. Houston Couch, highly regarded turf disease specialist and author, questions the real effect of anthracnose to Poa annua failure.

Cuts in agricultural extension programs serving the Green Industry prove that the message of the significance of our industries is not getting to Congress. More than 1,000 extension personnel lose their jobs to budget cuts each year and a gloomy fiscal 1980 budget will not improve the situation.

How long are we going to wait until we act, make our representatives responsive to our needs and to recognize the significance of our industries and to overlook the non-food markets when policy decisions are being considered.

The Green Industries can't rely on the farmer to protect their extension service helpers. Our associations must quickly make direct contact with the Advisory Board to represent our interests during the priority setting sessions.

The person to contact is James Meyers, Executive Secretary, National Agricultural Research and Extension Users Advisory Board, Room 349-A, U.S. Department of Agriculture, Washington, D.C., 20250, 202/447-3684. The USDA Information Office has assigned Howard Hass to cover the Board full time. He can be contacted at 202/447-2863.

Input from landscape contractors, nurserymen, arborists, golf course superintendents, irrigation contractors, and reclamation supervisors is essential to avoid further cutbacks in ornamental and turf programs through extension.

Currently, the President's budget is $40 million beneath the amount conservatively proposed by the National Association of County Agricultural Agents. Its figures were based upon a 7 percent inflation rate, far below the actual 14 percent rate.

The President has proposed a reduction in both extension and research budgets in 1980 from 1979. Maintaining current levels would have required cutbacks because of inflation. A reduction will mean severe cutbacks in extension and research services. The President has proposed a serious near elimination of the programs for agricultural teaching and education. This translates into 600 lost teaching jobs and a severe reduction in training of future educators for agricultural sciences.

Urban Forestry programs, an effort to replace lost vegetation in urban areas, is listed as the lowest priority for extension. Before it comes maintenance of current programs, restoration of programs cut by the President, and nutrition research.

We realize that to balance the budget some things have to be cut. But the President is cutting his own budget to pieces if he discontinues programs which result in more tax revenue through increased output.

Extension and research are some of the few programs in government that provide a return on investment. Measuring the return is difficult and therefore disregarded by policy makers. Furthermore, they never will be inclined to measure return until they are encouraged by voters to do so.

A single vote may seem insignificant, but thousands make representatives take notice. The Green Industries must use the power of the vote to make their message heard, now, and with permanent reinforcement.

I think most of us, including this magazine, have neglected what goes on in Washington. Apathy some call it, or avoiding the complex and unpleasant things in life. This negligence could cost us in jobs and growth in the future if we don't act now.

Weeds Trees & Turf will strive to uncover and pass on more government news in the future. We will arrange and publish interviews with key officials affecting the Green Industries. We will publish news about association efforts in Washington.

Hopefully, with this material in your hands, you and 45,000 other readers can have an influence on government by knowledgeable reaction to policies that affect your business. WTT
Now, a revolutionary irrigation controller that gives you unmatched flexibility and accuracy.

Another way J-M Buckner® Waterscaping helps you keep things green.

J-M Buckner is first to offer you dependable, solid-state microelectronics in an irrigation controller. It's our KCS line for golf course, commercial, agricultural and residential applications. They're as easy to operate as a pocket calculator. Twelve or twenty-four individual circuits and four 14-day schedules are accurate to a fraction of a second. KCS totals daily watering time, allows skipping up to nine days, has both automatic and manual syringe cycles and many more unique features. It's designed for accurate, reliable performance to save you time and money.

Waterscaping: Total Irrigation Capability.
With increasingly elaborate landscape designs and constant changes in the weather, irrigation is no longer a mechanical function. Johns-Manville takes the next step... Waterscaping. It's more than controllers, valves and sprinklers that simply move water. It's the total scope of uniform irrigation as it's needed... from research to product design to field performance. Waterscaping is everything you need.

Behind It All: Experience, Research and Testing.
At our computerized testing facility in Fresno, we research, test and refine all the parts of Buckner systems to develop components that will provide uniform water application and perform according to our published performance data. The components we test come directly off the assembly line.

One Company That Has It All.
Working with our nationwide network of trained distributors, J-M Buckner has a broad range of products and services to meet virtually any irrigation need. To learn more about Waterscaping (technical information, planning assistance or quality irrigation system components), contact your J-M Buckner Distributor or Vince Nolletti, P.O. Box 232, Fresno, CA 93708, (209) 442-8511.

HIRE THE INSECTICIDE THAT LIKES TO WORK OVERTIME.

DURSBAN* brand insecticides provide unsurpassed residual control of cutworms, chinch bugs, sod webworms, and a dozen other turf pests. Both DURSBAN 2E Insecticide and double-strength DURSBAN 4E insecticide keep working a lot longer than other turf insecticides. This residual action saves you time, trips, and labor. It also saves you money. In fact, DURSBAN insecticides cost less than most other turf insecticides.

Ask your supplier for the turf insecticide that works overtime for you. Get DURSBAN 2E Insecticide or double-strength DURSBAN 4E Insecticide. Just be sure to read and follow all label directions and precautions. Agricultural Products Department, Midland, Michigan 48640.

Does the 3-point hitch on your tractor offer this much?

John Deere's 3-point hitch system has features that are unequaled on other utility tractors. Our Load-and-Depth Control system provides a variety of draft settings that let you adjust sensitivity of the hitch. The system reacts quickly and automatically to load variations because sensing is done through the draft links. You get the best possible performance from rear blades, rakes, scarifiers and other specialized tools.

A vertical float position allows gauge-wheel-equipped tools to follow the contour of the ground without scalping—important for good work with mowers.

Adjustable sway blocks handle Category 1 or 2 tools and can be positioned for sway or no sway.

That's only the beginning. The good news continues on forward through power take-off options, variable tread widths, and tire choices, for example. Ask your John Deere dealer to show you what he can offer you in John Deere Utility Tractors, equipment, and after-sale support. John Deere, Moline, Illinois 61265.
