ORTHENE - INSECT PROTECTION AT ITS BEST.

ORTHENE Tree & Ornamental Spray is a giant step forward in protection. It kills a wide range of insects, on contact and with a lasting residual action. In fact, it's probably the only insecticide you need.

Here are some of the insects it kills: aphids, bagworms, birch leafminer, tent caterpillar, Douglas Fir tussock moth larvae, gypsy moth larvae, weevils, scales, California oakworm, spring and fall cankerworms, Nantucket pine tip moth larvae, and adult root weevil.

NEW FROM ORTHO
A companion product from ORTHO is ORTHO-MITE™ Ornamental Miticide. It's the perfect solution for mite problems on flowers and ornamentals.

AVOID ACCIDENTS:
For safety, read the entire label including precautionary statements. Use all chemicals only as directed.

Please send me more information on ORTHENE.

The yew (Taxus), one of the finest narrow-leaf evergreens for use in the landscape, has a long history. Taxus fossils have been found between layers of sandstone and shale, originating in the Jurassic Period (plus or minus 150 million years ago). Records show yew foliage was used as a poison during Caesar’s time. The English Yew (Taxus baccata) is the patriarch of European trees. It is native to the British Isles, growing best in the alkaline soils which are deep, fertile, and well-drained.

In England, the Yew has long been associated with religion. During the Druidic Period, the yew was a sacred tree, believed to be a symbol of long life and/or immortality. Early Christian churches were built in yew groves (Fountains Abbey, Yorkshire). In most English churchyards, one can find the yew — a symbolic link to immortality.

Yew wood is extremely hard and durable. It is tough enough to be used as cogs in a mill, on cart wheels, and cabinets. During medieval times, it was a medium for warfare, being a part of the finest bows and arrows. Today, furniture makers use yew wood for fine quality pieces.

There is much controversy about how many species of Taxus exist. There are three species somewhat universally accepted — English Yew (Taxus baccata), Canadian Yew (Taxus canadensis), and Japanese Yew (Taxus cuspidata).

English Yew (T. baccata) is completely hardy as far north as New York City and a few varieties are hardy into the Boston area. This plant reaches 30 to 60 feet in height, growing as broad as tall, and best suited for partially shaded areas. The hardest of the English Yews is T. baccata ‘Repandens’ which was developed in the United States. This prostrate growing plant reaches 20 feet in width and 5 feet in height. It makes a wonderful ground cover.

Canadian Yew (T. canadensis) is a native species reaching 3 to 4 feet in height. Its native growing range is from Virginia to the Great Lakes Forest. It will tolerate shade and has light, pale green foliage. The only hybrid grown in the trade today for use in the landscape is X T. hunnewelliana — a cross chance of T. canadensis and T. cuspidata.

Japanese Yew (T. cuspidata) was brought from Japan to the United States in the late 1860's by Dr. Gordon Hall. This plant often reaches 60 feet in height and is extremely hardy. Cultivars used in the United States are hybrids — crosses between T. cuspidata and T. baccata, called Anglojapanese Yew (X T. media). The Anglojapanese Yew cultivar is the hardiest and most versatile group of yews that has adapted to conditions through the Midwest.
and Northern U.S. A few of the common varieties grown in the trade which display good growth characteristics include 'Chadwick', 'Brownie', 'Densiformis', 'Flemmer', 'Ward', 'Ohio Globe', 'Costich', 'Hatfield', 'Hick's' and 'Fairview'. A close look at some of these varieties will show their adaptability to shade or sun, hardiness of continental winters, and their great variation in form, ranging from 5 to 40 feet in height and 8 to 25 feet in width. For many years, yews couldn't be grown in the Midwest, due to the continental climate. With the development of the Anglojapanese Yew cultivars and the hardiness bred in the plants from the Japanese Yews, yews became a regal Midwestern plant.

'Chadwick' Yew is a low-spreading type, reaching 3 to 5 feet in height. It has rich dark-green foliage and doesn't break down when grown in areas of heavy snow.

'Brownie' Yew is a plant reaching 6 feet in height and 10 feet in width with a round habit. This plant has rich dark-green foliage year-round but winterburns if exposed to southwest dry winds or sun. 'Brownie' was one of the best yews developed by horticulturist T.D. Hatfield.

X Taxus media 'Densiformis' has a loose habit of growth, reaching 6 to 8 feet in height and 18 feet in width. This plant must be pruned or it will break apart under the weight of heavy snow.

'Ward's' Yew is in common use throughout the Midwest. If unpruned, it will reach 6 feet in height and 25 feet in width. This plant must be pruned heavily to avoid snow injury and become extremely resistant to desiccation (winterburn). 'Ohio Globe' is a round plant reaching 10 feet in height and width. It grows well in exposed or shady areas, rarely winterburns, and is an exciting blue-green year-round.

'Costich' is a columnar yew reaching 15 feet in height. It is difficult to find in the trade but grows well under Midwest conditions. It requires little pruning, is strong, and doesn't break under the weight of even the heaviest snow, while rarely winterburning.

'Hatfield' Yew is the tallest of the yews developed by Hatfield at the Honeywell Estate. It has a pyramidal habit of growth reaching 30 feet in height. During the past twenty years, this plant has shown little damage due to desiccation or mechanical injury. This tree-like yew fits into many areas, e.g., foundation plantings around public buildings or two-story homes.

When selecting yews for the home landscape, one of these Anglojapanese cultivars is perfectly hardy from Kansas City to Boston, throughout the Northeast as well as Midwest. Once the correct variety is chosen, understanding the insects, diseases, and maintenance requirements makes yew an outstanding addition to the landscape. Everyone should visit the Ohio Research and Development Center to view the Taxus collection started by L.C. Chadwick. Here one can observe the unpruned habit and landscape height of many yew cultivars.

Yews should be planted in slightly alkaline, well-drained, fertile soils, preferably in the spring. The pH should range from 6.5 to 7.5. A sandy, well-drained loam high in organic matter is optimal. Yews are often considered slow-growing plants but, if grown in fertile soils and fertilized annually with the equivalent of 10 to 15 pounds of 12-4-8 per 1,000 square feet, they regularly will grow 10 to 20 inches in height per year. Clay or poorly-drained soils often result in decreased growth and even death (root rot).

When selecting a site, one should remember yews are shade-loving plants. They will grow best in a north to northeast side of a building or as an understory plant. Many yews burn severely (desiccate during the winter) if exposed to south or southwest winds. (Check above varieties for tolerance to sun and southwest winds.) If one has a specimen plant exposed to southern winds, it should be sprayed with an anti-desiccant or, more effectively, wrapped in late November with burlap to reduce water loss.

Pruning is important to remove weak, diseased, or dead branches and shape where desirable. Yews should be pruned in mid-summer (July) and again after the feather growth stops (first week of August). Pruning no later than mid-August will allow the plant to callus and, therefore, reduce winter injury.

Yews have few insect problems, but there are several that are catastrophic. Black vine weevil is a most serious problem. The adult feeds on the foliage, taking crescent-shaped bites out of the needles while the larvae feed on the root system, reducing it to a point where the plant declines or dies, going downhill slowly. There has been much work done recently at the Ohio Research and Development Station for the control of black vine weevil. Several compounds are showing effective control, such as Orthene or Guthion (registered Michigan label). One should check with one's individual Cooperative Extension Service.

Fletcher's scale can cause some defoliation, but if one is a keen observer, a simple spray in the spring with superior dormant oil (70+ second) will totally control this problem.

Red spider mite can cause problems during dry periods of summer. The symptoms include a reddish or bronze foliage. Two sprays of an adult miticide, e.g. Kelthane, or one spray with an ovicide, e.g. Morestan, will clean up this potential problem, but one should spray only when a problem exists.

Yews, due to their rich regal-green color, are effectively used in mass plantings or as specimen plantings. They are effectively combined with many plants but are aesthetically outstanding when combined with bedding plants, such as red geraniums or salvia. Yews grow well in shade or sunny conditions (watch varietal selections). While being perfectly hardy and able to withstand even the coldest winters, yews seem to be most sensitive to over watering or poorly drained soils. There are many growers who specialize in the production of yews. The areas of concentration would include Rhode Island, Connecticut, Pennsylvania, Ohio, and Western Michigan. Whereas L.C. Chadwick was instrumental in the wide-spread production of yews in Ohio, Mr. N.I.W. Criek of Cottage Gardens was instrumental in its introduction to Michigan. Each area of the country has its favorite selections, but yews can be looked upon as truly regal landscape evergreens.
USED EQUIPMENT

HI-RANGER 54’ and other aerial buckets. 2 112' roll-on Ringers, Progress hyd. loader, chipper truck, John Bean 20 g.p.m. sprayer, 4 & 9 ton tag-along trailer. Allied Enterprises, Inc., W204 N1509 Goldenvalle Rd., Germantown, WI. 53022. Phone 414 255-6161.

FOR SALE: 78 inch Big John tree mower, serial 32 in good condition, original owner. Trees, Inc. 517 627-9155.

NETSETTER “ROBARK”, like new, used on 40 acres. P.O. Box I, Sumner, WA 98390, 206 825-2403.

BRUSH CHIPPERS, used Bean sprayers, Model 10 Vermeer stumpers, Hydro-Ax and bucket trucks. Lease or for sale. Large inventory available. Call or write P. C. Gould Sales Company, Plains Road, Essex, Conn. 06426, 203 767-1636.

TANK TRUCK SPRAYER — Big custom built 1800 gallon all stainless insulated lifetime tanks. 160 G.P.M. pump, (F.M.C.) high pressure pump and engine on heavy duty truck. C 750 Ford w/air brakes, can double as water tanker or sprayer, only one of its kind. 513 424-2052.

PRECISION BUILT R.M.F. plugger for installing grass plugs in fairways, etc.; Also, Beck 2 row planter, both are gasoline engine driven and like new. 513 424-2052.

FOR SALE AS A UNIT: 1972 Chev. chipper trucks with steel dump box, 350 engine, 2-speed and powersteering, 200-500 miles. One owner and 1975 Asplundh Whisper chipper, 16 inch, 300 cylinder, Ford engine, low hours. $14,000.00. 1970 Vermeer stump cutter model 2460, low hours. $7,500.00. 1973 Vermeer stump cutter model 630, low hours. $4,200.00. 1974 Elliott, 70 ft. basket truck on C65, Chev. trucks 23,000 miles with extra basket to reach 81 ft. $36,000.00. All equipment is in excellent condition, all have retired. Call or write Robbins Tree Service, P.O. Box 2116, East Peoria, IL 61611. Phone 309 699-7920.

FOR SALE: Three spray trucks, 1976 and 1977 Chevy. C-60’s, completely equipped with 1,200 gallon steel tank, mechanical agitation. C-50’s, 300 gallon, hydraulic reel, hose, etc. Complete units, excellent condition, ready for immediate use. Will sell separate or special combined price. Phone 501 867-5201 day or 501 896-0879 nights.

TREE SPRAYER—Minnesota Wanner, skid mounted fits 9/4 P.U. 200 gallon poly tank, 35 GPM 800 lbs. max pressure, Onan 18 hp 2 cylinder engine, Hanney electric hose reel, 100 ft. 1/4” hose, spray gun, deep root feeder. Used 1 season. $31,500.00. Chicago area. Call 714 765-0710.

FOR SALE: Liquid lawn treatment sprayers, 1972. 300 gallon, 1200 gallons, units available. All feature fiberglass tanks with jet spray. Trucks shown in March issue. For more information call: Dan Conway or Rob Franks 318 221-4289.

1,000 GALLON FINN hydro seeder, model HSUS16XA rebuilt complete, used one season only, mounted on 1955 Chevy truck, good rubber and rebuilt engine on truck, hoses and nozzles included. $10,500.00. National Fiber Inc. 803 493-2932.

PRENTICE LOG CRANE: 1974 model G with tandem hydraulic system, 310 ton grapple, for pulp or tree removal. In good shape, can be sold mounted or not mounted. Madison Sales Equipment, Inc. Madison, Wisconsin. Phone 608 222-5591.

50 FOOT SERVI-LIFT truck, chip box. Ford 600 diesel, 16” chipper Vermeer model 10 stump cutter to sell altogether. $20,000. Lowell Mooney, Mt. Liberty, Ohio. 614 625-5951.

1977 BOWIE 350 gallon hydro-seeder with bean pump and all attachments and hoses. $5,000.00. Mark J. Trusty, 816 283-2562.

products in the lawn and garden, turf and agricultural markets. Territories available throughout the United States. Please send resume, including territory covered, to Weather Tec/Skinner Corp., 5645 East Clinton Ave., Fresno, California 93727. Dealer inquiries invited.

SALES MAN-DESIGNER. Must be able to implement the job that was sold. Background should include general business, administration. Considerable latitude given right person. Parsons Tree & Landscape 703.971-3998.

FOR SALE

FOR SALE—Liquid lawn fertilization and service company, 3 year old company, in major southern city. Full staff. Good equipment. Established customers. For more information, call: Robert D. Franks 318 221-4289.

BUSINESS OPPORTUNITIES

MISCELLANEOUS

START YOUR LANDSCAPING career now! Write: School of Landscape Design and Sales. Lake City Community College, Lake City, Florida 32055. Fully accredited and V.A. approved.

SPECIAL INVITATION TO ATTEND and learn at the 1980 summer conference of the Green Pro Executive Newsletter, August 3-5, at beautiful Tamiment 2200 acre resort and country club in the Poconos. Half day sessions feature Mr. Robert Earley, editor/publisher of Lawn Care Industry Magazine, Dr. W. H. Daniel, pre-eminent turf specialist from Purdue University, and many other expert instructors/advisors to help you build your business, improve profits, get more dollars from your efforts, and gives your Key-Man a fringe benefit that benefits you. Subjects include ... business problems, scheduling, programming, lawn care plans, outlook for the 80's, direct response advertising, diseases, seed, fertilizers, insects, micronutrients, soil and soil testing, profit potentials, etc. (The consensus of those attending the winter meeting ... "I came expecting to learn alot ... and I did"). This is one conference your wife will enjoy! The low attendance fee includes accommodations, meals, resort activities, star entertainment, exhibits, manuals, workshops, seminars. Learn from premier experts on an eyeball to eyeball level for greater profits and professional performance. Call Miss Rice collect 516 483-0100 for information and reservations. Available accommodations limited, call today. Visa, mastercharge accepted.

KELWAY SOIL pH TESTER, used by professionals everywhere. Direct reading, longlasting, portable, lightweight, no power source. Model HB-2 reads moisture too. Available through local distributors or contact Kel Instruments Co., Inc., Dept. W, P.O. Box 1069, Clifton, N.J. 07015. 201 471-3954.

TRAINING SCHOOL for Hydro-Seeders and weed control sprayers. Write Lawns, Box 311, Bethany, Oklahoma 73008 for free information.

A remarkable innovation in FORK LIFTS

The SPYDER ... versatile, flexible, maneuverable.

PORTABILITY: Can load itself on rear of truck or trailer bed or attach to custom designed trailer for towing behind car or pick up truck.

WEIGHT: Approximately 2700 pounds.

CAPACITY: Carry over 3,500 lbs. Comparable to 12,000 lb. Fork lift.

PERFORMANCE: Can outperform, outmaneuver, and out maintain any other fork lift.

OPERATION: Operates in rough terrain and muddy conditions.

STRENGTH: Exceptional strength comes from total hydraulic system and ability to balance load.

A WHOLE TREE CHIPPER AT A BRUSH CHIPPER PRICE

Chip trees and limbs up to 12" in diameter — Chip sawmill slabs — Chip Christmas trees — Chip dry material — No need to cut to length with the heavy duty Eeger Beever. A safe machine with no wood kickback — Operator can feed from curbside — Makes a dimensional chip — Operates with low fuel consumption and is no more expensive than a brush chipper.

Write 135 on free information card

THE EEGER BEEVER WILL OBSOLETE THE CONVENTIONAL BRUSH CHIPPER BECAUSE:

• It’s more productive.
• It will last longer.
• It’s less expensive to operate.
• It’s less expensive to maintain.
• It’s a safer machine to operate.

CALL THE EEGER BEEVER HOT LINE: 517-866-2381
