THE ROYAL GROUNDSKEEPER LEARNS A LESSON ABOUT CERTIFIED

Turf- type
Perennial Ryegrass

WHAT KIND OF GRASS SHALL I PLANT?

"FORSOOTH" SAID THE WIZARD, "IT IS KNOWN THAT THE FINEST GRASS IS CERTIFIED MANHATTAN PERENNIAL RYEGRASS... TIS GREAT FOR JOUSTING FIELDS, GOLF MIDDLES (FOR FAIRWAYS HAD NOT YET BEEN INVENTED) AND CASTLE LAWNS!!"

AT THE SEED MARKET, THE ROYAL GROUNDSKEEPER DISCOVERED HE COULD PURCHASE UNCERTIFIED FOR A FEW CENTS LESS...

THOUGHT HE...

"I WILL SAVE HIS MAJESTY A FEW CENTS PER POUND, AND HE MAY BESTOW KNIGHTHOOD UPON ME FOR SUCH A SHREWD BARGAIN!"

AND SENTENCED HIM TO WRITE 1,000 TIMES ON THE CASTLE BLACKBOARD...

A KING CAN'T BUY A BETTER RYEGRASS!

Problems and Successes in Modern Tree Pest Management

Henry Gilbertson, director of technical services for Davey Tree Expert Co., spoke at the Northern Forest Insect Work Conference last year. He notes the major tree pests and what you need to control them.

Urban Adaptability of Ash, Hackberry, and Katsuratree

In the third part of his series on trees, Dow Gardens' Doug Chapman discusses three which may substitute for the American elm.

The Anatomy of a Spray System

From the millimeter of an orifice nozzle to the maximum pressure of a pump, every facet of a sprayer's mechanics should be known. With that expertise, one system may easily adapt for various uses.

SYMPOSIUM ON LEAF SPOT

This special section for turf managers presents papers given at the 18th Nebraska Turfgrass Conference held during a symposium on Helminthosporium leaf spot, which was held in conjunction with the 18th Nebraska Turfgrass Conference.

Foundation Planting Continues to Haunt Landscape Design Progress

Jot Carpenter and Fred Buscher of Ohio State give a chronological study of design styles, specifically base plantings, and their effect on modern design principles.

New Dursban Labels Aid Native Elm Beetle Control

New state local need and national labels for Dursban provide arborists with backup control of the native elm bark beetle for Dutch elm disease.
Convert to automatic
irrigation without taking a bath.

Toro has just introduced a new system that lets you install automatic irrigation without digging up your turf. So that means you don't have to dig down into your pocket to afford the conversion.

Toro's new MPC® concept uses hydro-mechanical operation to control the sprinklers. And that turns the tide of rising irrigation system costs by doing away with new trenches and the installation of control wires or tubing. An MPC system simply responds to controlled pressure signals transmitted through your existing piping.

With an MPC system golfers play right through installation. In fact, your own crews can do most of the work of converting your quick coupler system.

Automatic irrigation pays off. In healthier, heartier turf. Better greens. And knowing that every night the watering will be done exactly right. With nobody around to get wet.

If an MPC system sounds hard to believe, you haven't heard anything until you find out how little the cost will be for your course. Call our Golf Course Marketing Manager, John Skidgel, today. His 24-hour number is 714-359-0701. One thing's for sure. You won't get soaked.

The Toro Company, Irrigation Division, P.O. Box 489, Riverside, CA 92502. International Telex: 676-490.
OUTLOOK

The more we try to gauge trends in the economy the more we realize how unpredictable our complex economy is. It is complexity that is preventing severe problems currently.

That is not to say many are not being severely hurt by conditions at present. Hundreds of thousands of auto workers will tell you that. But the Green Industries may get just a light shower rather than a monsoon.

Nonresidential construction contracts are holding their own so far. Architects are keeping busy and even expanding in the Sun Belt. Nonresidential landscape construction will benefit from winter contracts for a year or more. Highway construction has received a helping hand by a recent surge in Federal dollars. Erosion control and highway maintenance contractors will get a boost eventually from this news.

The maintenance contractor faces the toughest challenge with fertilizer prices jumping 15 to 20 percent, gasoline prices likely to rise another 30 percent, and similar price hikes for other petrochemicals and supplies. A recent survey by ALCA provides additional cause for concern because the average profit of landscape contractors was 4.24 percent. There is not much fat to work with. ALCA also reports average liabilities of $321,000 on assets of $520,000, $171,000 of these fixed assets. Capital averaged $197,000.

It is critical that everyone in the Green Industry get a handle on his books. Taking jobs for a loss just to get cash flow or to showoff may be a fatal mistake in a tight year such as this. Jobs should be priced individually, carefully, and with all overhead considered.

Business consultant Warren Purdy gave an excellent talk on costs at the ALCA show last-month. I'd recommend that local associations arrange financial management seminars as soon as possible to help their members keep dry in 1980.

LETTERS

On the front cover of the December issue the caption for the tree illustrated was Buckeye or Horse Chestnut. These two are as different as the silver and sugar maples. The Ohio buckeye (Aesculus glabra) has smaller greenish yellow upright panicle six-in. high flowers, is more roundheaded and broader, five leaflets and palmately compound, colors up a good orange in autumn and the winter terminal buds are clean.

Whereas the horse chestnut (Aesculus hippocastanum) usually has seven leaflets also palmately compound, poor fall color, very susceptible to leaf scorch, more upright, very sticky buds in winter and whitish flowers with red and yellow throated 10- to 12-in. flower clusters.

Dr. L.C. Chadwick, Professor Emeritus of Horticulture at Ohio State University, is very emphatic in the differentiation of these two species.

Dick Sebian, Grounds Construction Foreman
S.U.N.Y. Buffalo, NY

Thank you for your correction. The fact that one is considerably more susceptible to leaf scorch is worth the attention of anyone who specifies trees for low maintenance landscapes. By the way, Dr. Chadwick has been writing Doug Chapman regularly on Doug's tree selection series. He still is emphatic on differentiation of trees according to hardness, disease resistance, and proper use of trees in landscapes.

Why isn't there more emphasis placed on certification of landscaper skills? It is now being done in the automotive industry to weed out the schlock work.

K.S., Germantown, MD

Your point is well taken by the executives of both the Professional Grounds Management Society and the Associated Landscape Contractors who are viewing such programs. There has been some resistance to certification in certain states due to ineffectiveness by government agencies and their enforcement. The association method of certification seems to be preferred. PGMS has just begun accepting application for certification. Interested persons should contact PGMS, Allen Shulder, 19 Hawthorne Ave., Pikesville, MD 21208, 301-653-2742.
On the greens, the fairways...all around the links, inside the clubhouse and under all the sinks

DURSBAN 2E is the one insecticide that works. DURSBAN® 2E Insecticide is ideal for broad spectrum, multi-purpose insect control everywhere around the club. Outside, DURSBAN 2E gives you unsurpassed control of turf pests like chinch bugs, sod webworms and cutworms, plus ticks, chiggers and mosquitoes. It even wipes out bagworms and many other ornamental plant pests. Inside, it cleans up the toughest roach problems, and keeps working to rid your buildings and restaurant areas of insect pests. Ask your supplier about the one insecticide that really works, DURSBAN 2E. Just be sure to follow all the directions and precautions on the label. Agricultural Products Department, Midland, Michigan 48640.

Circle 152 on free information card
ALCA growth evident at annual meeting

The growth in membership and market diversity of the Associated Landscape Contractors of America was clearly evident during ALCA’s annual meeting in San Diego in February.

More than 750 contractors attended, a dramatic increase in attendance from the 1979 show. More than 40 exhibitors had booths. An equipment demonstration in a field next to the Town and Country Hotel provided an effective and dramatic display of tractors, trenchers, trimming equipment and hydraulic mulching and seeding machinery.

Perhaps the most noticeable difference in educational sessions was the presence of many interiorscape contractors and designers which also meant a greater percentage of women delegates. This group of specialized contractors listened intently to all business sessions.

The location of the show attracted a large number of family members. It may have also provided competition for some of the sessions which had surprisingly low attendance even though the subjects were recommended by ALCA members themselves.

Concurrent sessions, as many as four at once, gave delegates a wide choice of topics. To show the diversity of topics covered, these are some of the specific market areas covered: design/build, interiorscaping, erosion control, irrigation, maintenance, lawn care, and basic contracting.

In addition to these there were sessions on communications, and bidding and costing. The sessions began with the keynote presentation by Mike Vance on Creative Thinking.

Sixty-four landscape projects, including three outside the United States, were honored during the Environmental Improvement Award ceremonies at the meeting. There were 11 grand awards, 17 merit awards and 33 awards of distinction. Included in the awards were two from the United Kingdom, one from Saudi Arabia, and nine for interiorscape projects.

Grand Award winners included:

Residential - Parson and Wewerka

An early morning fog burned off in time for a whole morning of equipment demonstrations next to the convention center.
Vegetation Problems?

Spike lasts longer than most other herbicides with fewer pounds per acre!
When applied in accordance with label directions, commercial field use has proven that Spike remains effective longer than other products tested, preventing regrowth and permitting lower application rates in succeeding years.

Spike resists lateral movement!
Spike is non-volatile, control stays where it is needed instead of "shifting" into unwanted areas, enabling specific placement.

Spike gets many vines, brambles and woody plants!
Years of commercial use have proven Spike's effectiveness against a wide spectrum of undesirable and unwanted vegetation, especially the tough perennials tenacious vines, and so called hard to control species, like mullein, pigweed, curley dock, and kochia.

Spike gets many of the brush species the others leave behind!
The most persistent vegetation control problem is brush. Spike helps solve that problem almost any time of year... and Spike is really tough on white oak, white ash, and big leaf maples.

Spike provides versatility and easy application!
Commercial use has proven equal effectiveness for both of Spike's principal product forms... wettable powder for spray application, or granular for mechanical application.

Wherever weed and brush control is the problem... in storage yards, parking areas, tank yards, around buildings and warehouses, along road shoulders, fence rows, ditchbanks and railroad spurs... the ideal remedy is SPIKE. It does what it promises!

Order Spike from your Elanco Distributor today. Spike should be the foundation of your vegetation control program.
Also available as a granular form in 50 lb. bags and a convenient to use dispenser box.

To avoid killing desirable vegetation, read label before application.
