The lawnmower injury problem is not a tree problem but a people problem. It is a classic case of communication breakdown. The solution is to educate lawnmower operators about tree wounds and then to hold them responsible for any tree wounds they cause.

**Injury treatment**

Bark can often be successfully reattached to trees if the wounds are treated within a few hours after injury occurs. Torn bark should be positioned as much as possible in its exact position before the injury and held in place by a few small tacks or staples. If several days or weeks have passed since the injury, torn or loose bark should be cut away and the edges of the wound should be traced using a hand tool such as a pruning knife.

Pruning tools should be sterilized between trees. There is no need to cut additional tissue around the wound to achieve a certain shape. Avoid making deep scribes or any vertical sharp points which serve as additional sites for bark dieback and starting points for bark cracks.

Older injuries with callus development all around the wound are best left alone. If any bark around old wounds is dead it is advisable to trace the area back to live bark. Application of wound dressing for cosmetic purposes is optional.

APRIL 1984/WIIE DS TREES & TURF
Southern California — Rain Bird Country.

From the $1 billion Los Angeles International Airport, along California's famed freeways, to the area's many stadiums and sports arenas, Rain Bird products are doing their part to make this year's competition the greatest (and greenest) ever staged.

Whether it be on the playing fields, around the stadiums or in the parks and homes of Southern California — Rain Bird is there.

Government landscape managers range from volunteers to school superintendents, from janitors to generals, and from football coaches to engineers.

Despite the inconsistency, all landscape managers seem to be facing the same challenges; intensive use of baseball and soccer fields, the increasing need to justify expenditures, and dealing with the boss, the taxpayer.

We polled a variety of government landscape managers to get a feel for their problems and their solutions. This is more a slice-of-life report than a numerical listing of purchases or acreage.

**Computer use up**

We discovered the computer is rapidly gaining acceptance with government landscape managers. They are using computers to keep track of trees, equipment repair parts, scheduling, and to keep taxpayers posted on department activities.

Community size doesn’t seem to matter. Eric Anspaugh, superintendent of Kettering, OH, parks, and George Eib, superintendent of forestry and landscaping for Kansas City, MO, both use computers.

Landscape managers may have to share computer time with the street recreation departments, but they have access to a tool that helps them control labor, communicate with taxpayers, and justify needs.

Access to a computer does not seem to be a problem. Every person we talked to indicated their agency was willing and even anxious to help them. Setting up programs and record keeping systems are cited as early hurdles, but once these are cleared, computers seem to fit government landscape management.

A strong reason for the popularity of the computer is its role in defending landscape budgets. A landscape manager can document to the most skeptical committee member the scope of his department. Furthermore, the information a computer produces helps landscape managers come up with their own solutions to budget problems.

Kansas City is an example of creative computer use. Faced with smaller and smaller increases in his budget, George Eib realized he had to find a method to guarantee his department would have money to replace important equipment as it aged.

With the help of a computer, he devised an equipment amortization program. The replacement...
DYRENE SPELLS IN MEMORIAM FOR HELMINTHOSPORIUM.

Helminthosporium. For years, turf professionals have relied on DYRENE Turf fungicide. It works. DYRENE gives you effective control of the various species of Helminthosporium (Drechslera) which cause diseases known as melting-out and leaf spot.

DYRENE helps you control dollar spot, copper spot, snow mold (Typhula), and rust. It can be applied easily with standard equipment. Use recommended rates and follow label directions.

DYRENE Turf fungicide. It spells in memoriam for Helminthosporium. See your turf chemicals distributor.

value of key equipment (trucks, cars, mowers, etc.) is divided by its useful life. This amount is built into his budget each year and placed into an equipment replacement account. Eib does not have to make a capital expenditure request each time a piece of equipment needs to be replaced. It paid off this year when Kansas City froze Eib’s budget.

Kettering’s Anspaugh is lucky to have funds from a recent income tax increase in this city south of Dayton. Nevertheless, with the help of a computer he has documented the cost of maintaining each of 33 baseball fields under his care. Armed with this information, it’s easier to win financial support from leagues using the fields. During summer leagues his crew has to drag and reline nearly 30 fields each day. When leagues ask for fancier dugouts or bullpens, he has the data to negotiate.

Specialization
Many of the battles with boards can be eliminated when public agencies recognize the special knowledge and needs of landscape managers and provide them with a more direct link to decision makers.

Lenoir, NC, has specialized all city landscape needs into a single department whose manager reports directly to the city manager.

John Abernethy, the first person to be certified by the Professional Grounds Management Society in 1981, is the landscape superintendent in Lenoir, an important furniture manufacturing center. “My department does many of the things public works and recreational departments normally do,” he explains. “We take care of street trees, cemeteries, athletic fields, and parks, and plant 4,000 tulips and 6,000 annuals each year. The advantage is I go directly to the city manager when I need something, not a citizen committee.”

“Recreation and public works departments simply don’t understand what’s needed to properly care for public landscapes. They tend to look at landscape maintenance as an area to cut when budgets get tight. It’s much easier to explain the biological needs of plants to one person than a group,” Abernethy stated.

Specialization plays an important role at the U.S. Military Academy at West Point, NY. All pest control, from mice to weeds, is the responsibility of Theodore Copertino. His crew of seven controls weeds, diseases, structural pests, and outdoor pests from nematodes to gypsy moth.

This specialization gives John Nosick, head of maintenance, time to focus on facility maintenance.
THE PRODUCTION MACHINE

“HIGH CAPACITY, ECONOMICAL, HIGH-FLOATATION”

TURF BLAZER 727 - 104

That’s how this machine has been designed! The mammoth 104” appetite affords you 31% higher capacity than a standard 72” unit. With a 60” mower out front and two hydraulically operated wings, we have eliminated the application of long, troublesome belts and assured you of picture perfect floatation over berms and undulations.

Add to this a field tested, 3-cylinder water-cooled, 27 HP diesel engine in conjunction with hydrostatic transmission and you have a machine which will maximize your return on cost of acre cut!

Contact your local HOWARD PRICE distributor for a demonstration on your turf.

The parks maintenance department in Oak Ridge, TN, encourages citizens and workers to grade its work.

Report Card for Parks

by Maureen Hrehocik, managing editor

Not too many maintenance departments receive comments about their maintenance practices from the public, that is unless they make an all-out effort to solicit them.

The parks department of the City of Oak Ridge, TN, has done just that, and the results have shown a "dramatic" increase in productivity as well as quality of work.

Bill Sewell, director of recreation and parks and Larry Bailey, parks superintendent are behind the project that lets citizens grade the landscape upkeep of the city's buildings and facilities, athletic fields, community parks and flower gardens.

"What we found is that our personnel began to look at their work more than just a job and more as a personal responsibility because they knew the citizens of the town would be looking carefully at what they did," said Bailey. "Their specific areas of responsibility improved dramatically."

Bailey has taken the concept one step further. The employees also grade their work.

"They're their own worst critics," he said.

Bailey, 36, has devised a comprehensive 81-page grading manual with guidelines and photographs of "acceptable" and "unacceptable" levels of mainte-
Control!

Marlate, for control of Cankerworm, Japanese Beetle, Tent Caterpillar and Gypsy Moth on ornamentals, shade trees and shrubs. Available in a wettable powder and liquid formulations.

nance in certain areas. The areas are then given checks. At the end, the checks are tallied up and converted to a percentage, much like in school.

... specific areas of responsibility improved dramatically.

"We would like all of our areas to be at least a 3.0 (on a 4.0 scale)," said Bailey.

The improvement to the entire city's landscaping has improved tremendously since the outset of the new program.

The improvement to the division of recreation for 13 years and supervisor for six of them. He oversees 1,100 acres of turf including 15 public buildings, 12 athletic fields, 12 flower gardens, eight city parks, two baseball fields with Tifway (T-419) bermudagrass infields, five regular softball fields and four soccer fields. The majority of turf is K-31 tall fescue.

He works with a $194,399 budget and has the help of 6.5 people year-round and two extra helpers in the summer, mainly to work on the ballfields.

Training is goal

Bailey is very concerned about the training of his employees and has made developing an on-the-job training program a long-term goal to have implemented by summer 1985.

Weeds & insects

Bailey says his biggest maintenance headaches are weeds and pest control.

Chickweed, dandelions, nutsedge, crowsfoot, annual bluegrass, henbit, kudzu, wild garlic, plantain, purslane and ground ivy are the weeds that give Bailey and his crews the most trouble. His treatment for the weed problem depends on the weed itself and its location.

"We do a lot of spraying of non-selectives around tennis courts, bleachers and play equipment," he explained.

Soil testing is done to decide fertilization on areas that receive intensive landscape maintenance which would include athletic fields, flower gardens and the grounds around public buildings.

For the past few years he has had an increasing problem with Japanese beetles.

"At first we started setting traps out for them, but they didn't..."
