Par 3 on Pinehurst No. 2. Inset shows Poa annua in bermudagrass fairways.
uses a CBS perennial ryegrass overseed. Mowing is done every day or as needed. Greens vary from 1/4 inch to 4/32 inch; fairways and tees 1/2 to 3/4 inch; roughs 2 inches with 1 1/2-inch intermediate roughs. Aerifying is done from tree line to tree line with a Ryan Greensaire. Topdressing is a 3-2-1 sand, soil, sawdust mixture. The irrigation systems (Toro, Griswold and Moody) on five courses are automatic, while No. 2 is semi-automatic and manual.

“Golf is such a psychological game. An apple green color may be healthy for turf, but it won’t be aesthetically pleasing to most golfers,” said Maples, a quiet 35-year-old who considers experience the best teacher.

“I was raised on the courses Wayne Maples grew up on the courses at Pinehurst and manages the development’s most prestigious course, No. 2.

Lawn and turf care professionals turn to Kees Mowers for their commercial cutting needs.

- They know our Ultra High Lift Blades and baffled frame design delivers a smooth, even cut and a clean, safe discharge.
- They like the fingertip operation of clutch, brakes, power turning and variable ground speed controls.
- They need the maneuverability and positive hillside handling of a Kees.
- They appreciate the timesaving benefits of our 4-gallon fuel capacity...
- And they want the option of adding our convenient riding sulky and rugged 3-bushel grass catcher to their mower.

Kees Mowers can make short work of those tough cutting jobs, and give you a greater return on your investment. Kees 32”, 36” and 48” Mowers...the heavy-duty workhorses!

here at Pinehurst," he said. He worked with his uncle, Ellis Maples, who designed course No. 5.

Starting off his career as a superintendent at Pinehurst, Maples left to build a course in Alabama, worked at Lake Surf (now Woodlake) and Foxfire, both in North Carolina, and then returned to Pinehurst. Short courses at Virginia Polytechnic Institute and Clemson have rounded out Maples' work experience.

Pinehurst uses Toro Parkmasters, Greensmasters and Groundsmaster fairway mowers, Jacobsen Greensking walking greens mowers and Cushman-Ryan trucksters and outfront mowers. The more than 500 golf carts are taken care of outside the turf maintenance operation.

Working with Mother Nature
The climate is Metts' biggest problem.
"We're in the transition zone and it's hard to deal with," he said.

**Trailer aerator/dump box package by Dedoes:**
easy, quick and effective.

You can be sure they'll work for you. Can be pulled by most tractors including International, Toro, Ford, Massey Ferguson, Yanmar, Kubota, John Deere, E-Z-Go, and Cushman, because Dedoes trailer aerator and dump box attach to your hitch.

Newly designed remote control hydraulics for easy hookup and stable saddlebag weight boxes for proper penetration, are two hard-working features that make your job easier. Not only is it easy to operate, you'll get years of time-saving aeration with low maintenance.

The new trailer aerator is available in a variety of tine styles for tees, greens, fairways, lawns, right-of-ways, or institutional grounds.

So if you're responsible for strong, healthy, attractive grass and concerned with saving time and money, it's worth your time to investigate Dedoes quality aerators. Call today for a demonstration.

Metts controls pythium with Subdue and Terrazole. Chipco 26019, Acti-dione and Thiram take care of dollar spot and brown patch.

“Our disease program is both preventive and curative,” he said. “There’s a big difference growing bent and bermudagrass down here than in other parts of the country.”

Metts, 40, a superintendent for the past 12 years, got his B.S. in Agronomy from Penn State, studying under Dr. Joe Duich. He has been at Pinehurst 2 1/2 years. “There’s more pressure to keep the level of maintenance up here than at other courses I’ve been at because of the heavy playing schedule,” he said. “You never get caught up from the standpoint of keeping up with the golfers’ divots, ball marks and raking traps.”

About half of Pinehurst’s players are members, the others guests and tourists.

Metts grew up in Johnstown, PA. He worked at Norfolk Golf Club in Pennsylvania, did a stint in the military, was superintendent at Oxbow in Ohio for three years, and worked at Parkersburg Country Club in West Virginia before coming to Pinehurst.

Needs in the industry

Both men, while recognizing very distinct needs in their industry, are realists.

“The greatest challenge for me has been keeping up with all the changes in equipment and chemicals,” said Metts. “I really don’t have enough time to become a good golfer. Besides I go out and see everything that’s wrong or that I’d like to do better. I can’t help but look at it from the maintenance angle.”

“'The greatest challenge for me has been keeping up with all the changes in equipment and chemicals.'
It's a jungle out there.

And the Ransomes Bob Cat Diesel is King. With a cunning for cutting fuel consumption. And a quiet engine that purrs through the toughest, tallest terrain. What do you want? The most effective disease control? Or the most economical disease control? Don't compromise. Get both with strong, long-lasting CHIPCO® 26019 turf fungicide...now the leader in turfcare by a healthy margin.

**CHIPCO 26019 is Strong Medicine.**

Turf managers rely on CHIPCO 26019 because nothing is more effective against turf’s most damaging diseases: Helminthosporium Leaf Spot and Melting Out, Dollar Spot, Brown Patch, Fusarium Patch and Blight, and Pink and Grey Snow Molds.

**CHIPCO 26019 Lasts Longer...So It Costs Less To Use.**

CHIPCO 26019 gives tough control...21 days on greens and tees, and up to 28 days on fairways.
So for every treatment you can eliminate, you’re saving money—up to $10 per acre in just fuel and labor.

That means CHIPCO 26019 is more cost-effective than lower-priced fungicides that need multiple applications.

**Go With The Best On Greens, Tees And Fairways.**

For the highest performance on fine turf and the lowest cost on fairways, make CHIPCO 26019 the cornerstone of your spray program.

Ask for it and other fine products in the CHIPCO Turf Care Line at your local dealer.

Milwaukee Country Club

Dan Quast delegates responsibility and encourages ideas to turn turf graduates into great superintendents.

by Bruce F. Shank, executive editor

Danny Quast and arborist Dennis Fermenich stand in the Club's nursery.
When the Golf Course Superintendents Association of America coined the term “thinking superintendent” for information-sharing sessions at its conference and show, it may have been thinking of Dan Quast, superintendent at Milwaukee Country Country, Milwaukee, Wisconsin.

Quast, a 20-year veteran superintendent, enjoys the respect of MCC’s 350 members, and consequently their support for his “thinking”. They support a full-time arborist and crew, a tree replacement program to counteract losses from Dutch Elm Disease, a tree nursery, a student training program, an annual bluegrass reduction program, and Quast’s time away from the Club to travel to national turf conferences and to be an instructor at Jacobsen Manufacturing Company’s student seminars in Racine, WI.

After graduating from the turf program at the University of Massachusetts, Quast was hired by W.A. Cleary Chemical Corp. to work on its golf course, then became superintendent at Troy Country Club in Troy, OH, and later superintendent at Springfield Country Club in Springfield, OH. He moved to MCC in the fall of 1973 to help implement a number of improvements in the course recommended by golf course architect Robert Trent Jones.

Milwaukee Country Club was founded in 1926. The course, designed by Colt Allison, served its members faithfully for more than 42 years when the decision was made to host the Walker Cup in 1986. Fairways were narrowed and permanent bridges were built to cross the Milwaukee River.

About this time the membership started to feel the course was too rewarding to the low handicapper and too punishing to the high handicapper. “The course needed to be updated,” says Quast. “In three short years we made all the changes Jones suggested. We repositioned and added traps. We expanded tees to withstand increased play and to make the golf shot more challenging. Aprons around greens were eliminated and some greens were expanded and traps added. Trees were planted along certain fairways to create doglegs. In general, the hazards were made more realistic for today’s golfer.”

Reducing Poa annua

Tees, fairways, and greens at Milwaukee Country Club are a mixture of South German and Seaside bentgrass. A major problem with annual bluegrass appears to be solved by a program put together by Quast, USGA Green Section Director Stan Zontek, and Jim Latham of the Milwaukee Sewerage Commission. It combines clipping removal, reduced compaction by use of light-weight equipment on fairways, low fertilization levels, an improved irrigation system, and use of Rubigan on greens.

Fairways are mowed with a prototype Jacobsen HF-5 with baskets to remove clippings. Tractors and reel gangs are confined to the bluegrass roughs. Milorganite is the only fairway fertilizer. A two-row Toro Irrigation system was installed in 1981. Fairways are aerified once per year in September.

Quast uses Cleary’s FLUF on the greens. He is very pleased at the new turf fungicides (Bayleton, Subdue and Rubigan) and uses them all for his greens depending upon the problem. “No one chemical is a panacea for all turf diseases,” Quast says. “I mix the new fungicides with Thiram to cover as many diseases as I need.” Quast is especially pleased with the secondary benefit of Rubigan as a suppressant to annual bluegrass.

Arborist on location

When Quast arrived at Milwaukee Country Club he was faced by the casualties of Dutch Elm Disease (DED) and massive defoliation by cankerworms. Since he had his hands full with the redesign and knew the elms lining the fairways would eventually fall to DED, Quast proposed the club hire a full-time arborist to develop a treatment and replacement program for trees, and to be responsible for the plantings around the clubhouse.

Quast had discussed his tree problems with Dennis Fermenich who was completing work for the North Shore Elm Research Project. The challenge interested Fermenich so much he applied for the job and got it.

The first year Fermenich cut down 102 elms on the course and took counts of the elm bark beetle using pheromone traps. He used weak elms to attract the beetles, then killed them with tree-killing injections of cacodylic acid. Removal of dead and dying trees, dormant oil sprays, injection of Arbotect, and fertilization of healthy elms has reduced the loss to one or two trees per year.

Fermenich replaced the elms with a variety of trees, including zelkova, plane tree, maple, linden, honeylocust, pin oak, red oak, and ash. These younger trees act as a frame for the remaining, majestic elms.

Many of the trees come from the nursery established by Fermenich behind the maintenance building. Whips are purchased and grown in the club’s nursery to adapt to local conditions. They are moved onto the course when they reach three- to four-inch caliper.
Fermenich and his crew of two keep the clubhouse grounds immaculate and act as a reserve to the golf course crew when necessary.

The next challenge for Fermenich is the tussock moth which has doubled each of the last three years. He has already established a prevention program using Bacillus thuringiensis. He hopes to catalog each tree in the next years. He has already established a prevention program using Bacillus thuringiensis. He hopes to catalog each tree in the next

"We had to cut down 102 elm trees the first year," said Fermenich

The Milwaukee River separates one tee from a green. Wire baskets filled with rock stabilize shoreline.

**Change spray tips clean strainers in seconds... without tools!**

**New QuickJet system**

- National's initial cost is less than that of mowers sold to do the same job.
- Less down time. Standard off-the-shelf items like belts and bearings that are available from any local industrial supplier.
- Greater fuel economy. 44% to 62% less fuel consumption than power-robbing, hydrostatic type rotary mowers.
- One-third to one-half the cost of maintaining a National versus competitive rotary models.

New QuickJet System minimizes your service time and helps assure accurate delivery. The self-aligning quick "on/off" cap can be used with all interchangeable spray tips. The caps are available in 8 colors for color-coding different tip sizes.

**QUICKJETS SAVE TIME AND MONEY.**
