Tough mowers from rough cut to smooth finish.

The Utility Mower

The HT Series

The H Series

The J Series

Built for the commercial user, to assure lowest operational cost through efficient design, low fuel consumption, low maintenance, and long life. Built to take the hard usage of the commercial mower operator and the environment in which the commercial mower functions.

Hand-weeding areas like this doesn't make sense today. Not when Roundup® herbicide can do the job faster and better and give you more time to handle more customers.

Here's how: one-shot Roundup controls over 100 weeds right down to the roots, including poison ivy, poison oak and kudzu. One gallon of 2% spray solution can treat up to 30 tree rings for about a nickel each, or 1,000 feet of fenceline for less than $2.00.*

It also pays to use Roundup when you're working around expensive ornamentals—because Roundup won't wash, leach or carryover in the soil. And Roundup is virtually odorless and environmentally sound.

Use Roundup wherever you've been hand-weeding—around patios, flower beds, curbs, walkways, driveways, mulched areas, fences and steps. The choice is simple. You can spend valuable time hand-weeding. Or you can use Roundup to help you make more money. Now, that's using your head.

*Based on the cost of Roundup only to treat low growing vegetation.

FOR A FREE TRIMMING AND EDGING GUIDE FOR ROUNDUP CALL TOLL FREE 800-621-5800. IN ILLINOIS, CALL 800-972-5858.

Salary extremes between coasts
The latest salary survey of grounds managers by the Professional Grounds Management Society shows grounds managers on the West Coast to be the highest paid, and their counterparts on the East Coast to be the lowest paid, on the average.

The breakdown is as follows:
- Mid-Atlantic Region: (Pennsylvania, Maryland, Washington, D.C., Delaware, Virginia); an average salary of $25,819.
- Southeast: (West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Alabama, Florida); an average salary of $24,101.
- Mid-West Region: (North Dakota, South Dakota, Nebraska, Minnesota, Iowa, Wisconsin, Illinois, Indiana, and Ohio); an average salary of $24,249.
- Southwest Region: (Kansas, Missouri, Oklahoma, Arkansas, Texas, Louisiana, and Mississippi); an average salary of $26,957.

ASLA down to the wire
By its June 1 deadline, The American Society of Landscape Architects was only $61,000 shy of its $400,000 goal to purchase a building to be used as the national headquarters.

The Executive Committee and the Board of Trustees, however, voted to proceed with the purchase of the building and to keep up fundraising efforts, according to Society President Darwin Neal.

ALCA Grand Award to Brickman
A wooden bridge, man-made ponds and extensive greenery are all part of the landscape design developed by Theodore Brickman Co., Long Grove, IL, for a single family home in Barrington Hills, IL, that has won an Associated Landscape Contractors of America Grand Award for Excellence.

Brickman landscape architect Feryl Waldenmyer said the intent was to make the best use of existing vegetation and to provide optimal views of the 10-acre lake on the property.

EPA cracks down on wood savers
Application of three wood preservatives is now restricted to certified applicators following a July ruling by EPA. Certified applicators of pentachlorophenol, creosote, and inorganic arsenicals must wear impermeable gloves in all cases, wear respirators and protective clothing in many cases, and not smoke, eat or drink while handling the materials.

PESTICIDES
Maine paper companies battle spruce budworm
Maine paper companies, in an effort to protect their woodlands and also the state's largest industry, paid an estimated $5.5 million to spray 624,500 acres of forests with two chemicals, Zectran and Matacil, and with a natural caterpillar killer called Bacillus thuringiensis (Bt) in what has become an annual battle to control the spruce budworm.

Studies indicate the budworm could seriously affect Maine's paper-making capabilities by the turn of the century and the paper companies have responded with what is believed to be the nation's largest forest pesticide-spraying project.

Throughout May and June nearly 40 planes flew over infested areas, spraying chemicals and Bt. The Maine Pesticides Control Board said the spraying poses no danger and the chemicals will cause no lasting problems because dozens of support personnel were used to pinpoint the spraying thus avoiding populated areas.

EQUIPMENT
Exmark enlarging manufacturing plant
Expansion of Exmark Manufacturing Company's product lines as well as "a dramatic increase" in growth are the reasons for the $18,000-sq.-ft. addition under construction at the company's Beatrice, Nebraska plant. Exmark is a manufacturer and marketer of lawn and turf care products.

"We recently completed our new facility in Beatrice, and product demand by our distributor organization and our customers necessitates the immediate expansion of our facility," Robert Martin, the firm's president, says. "The acceptance of the
THE BROUWER TURF TEAM

**Mows**
Brouwer mowers are available in 3-5-7 gang models. Positive drive with no wheels and gears avoids slippage and prevents flattening of grass. Simple hydraulic lift design. Consistently sharp cut maintained with the Brouwer reverse gear backlapper. The Fairway mower is available with floating heads, front and rear rollers.

**Rolls**
Brouwer 230 double and 130 single rollers with special rounded edges eliminate turf damage. Hydrostatic drive and 30" width saves time, trouble and labour cost.

**Cuts**
Brouwer Sod Cutter's simple design makes operation, adjustment and repairs easy. Equipped with folding handles and kickstand for compact, stable transport and storage. Stripper blade available to help shred and cut old sod for easy lawn renovation. Also dethatcher blade for removing thatch.

GOVERNMENT

UPDATE

Monsanto/Carbide cases end, data arbitration stands unscathed

Years of heated debate, led by Monsanto and Union Carbide, have produced little relief to chemical companies wanting to protect secret data used to register a pesticide with EPA from competitors.

In August, we reported the Supreme Court ruled in favor of EPA in the Monsanto case, although the Court did recognize trade secrets as property. The Court shut the door completely when it ruled in a similar data arbitration case concerning Union Carbide that the constitutionality of EPA’s data compensation was not ripe for review.

Union Carbide says EPA will again start using its data in support of other companies’ registration applications. This opens the door for me-too registrations until Congress can amend FIFRA, something unlikely before 1985.

Chemigation regulations eminent

Federal and state pesticide regulatory officials are pressing for new rules to prevent groundwater contamination and accidental poisoning caused by chemigation, application of pesticides through irrigation systems. Posted warnings, restrictions by soil type and water table, and allowing only products specifically labelled for chemigation are the leading proposals for regulations. Expect restrictions by the end of 1985.

Other topics raised during a meeting of these officials in July, which could result in additional regulations, include using pesticides at less than label rates, standards to judge groundwater contamination, additional label warnings for fumigants, and possible elimination of the restricted use classification for pesticides.

Civil servants fight contracting out

Park Service employees are strongly influencing U.S. House Appropriations Interior subcommittee members to attach an amendment to the Park Service’s 85 budget to prevent contracting out. The Park Service hoped to save $15 million over the next two years by contracting out maintenance and repair services. It contracts $90 million in work each year to private concerns. Other agencies seeking to save money by contracting out include EPA, Transportation, Health and Human Services, and Housing and Urban Development. Once contracting out issues are settled, government bid work should vastly increase.

Meanwhile, the American Association of Nurserymen are accusing the U.S. Forest Service for unfair competition for selling overstock from its tree nurseries to the customers of private nurseries. AAN says private nurserymen can’t compete with the subsidized prices of the Forest Service and that overstock would not occur if the government nurseries were well-managed.

Davey joins effort to aid disabled

The Davey Environmental Services signed a contract to operate a new project recruiting disabled workers for work in nursery, landscaping, lawn care, arborist, groundskeeping, and allied industries.

The Ohio Area Office will be part of a national outreach effort called Horticulture Hiring the Disabled (HHD). The project is sponsored by a U.S. Department of Education grant to the National Council for Therapy and Rehabilitation through Horticulture. Horticulture business leaders in Ohio will be called to support the new project office.

The Davey Environmental Services is a division of the Davey Tree Expert Company, Kent, OH. Davey will be working closely with service and vocational agencies serving disabled persons in Ohio to identify new opportunities for training and employment of physically and mentally disabled workers.

Tom Hazelwood, operations manager at Davey, says, “We are pleased to be involved in this new project. It will add an extra dimension to our services and provide additional opportunities for employment of disabled persons in Ohio.”

Other HHD area offices are located in Upper Marlboro, MD, Lake Worth, FL, and Pleasant Hill, CA.

INDUSTRY

Allied sells liquid fertilizer business

Allied, an energy and chemicals concern based in Morristown, NJ, recently announced the sale of its liquid fertilizer business to members of the business’s management and E.F. Hutton & Co. The sale includes plants at Geismar, LA, LaPlatte, NB, and Hopewell, VA. Other details of the transaction were not disclosed.

Late last year Allied revealed the liquid fertilizer market had been unprofitable in recent years and announced that it was selling its operation. Allied said its 1983 profit would be reduced by $140 million as a result of the sale.

The new liquid fertilizer business will be called Arcadian Corp.

Changing, Even in Good Times

Changing, Even in Good Times

Competition causes manufacturers and distributors to rethink the Green Industry’s marketing chain.

by Bruce F. Shank, executive editor

As primary manufacturers expand their lines, are they pressuring you to replace equipment lines you carry with theirs?*

<table>

* Answers based on 113 equipment suppliers

be inclined to leave selling the end user up to large reformulators.

Forty-two percent of the chemical distributors report increased demand by customers for bulk chemicals and custom blending. Distributors with reformulating ability have a definite advantage in these cases.

One possible scenario for future chemical distribution is the large reformulator supplying bulk products and the small local supplier supplying small quantities, much like the grocery store and the convenience store. Forty-eight percent of the suppliers said this is happening already. Forty percent indicated local distributors will stop trying to compete with larger suppliers and raise their prices to or near suggested retail.

Equipment distributors receive territorial protection because they need it. The investment in parts, inventory, service department, and labor is sizeable. For every three chemical distributors, there is one equipment distributor. For example, Jacobsen has roughly 50 U.S. professional turf distributors and SDS Biotech has about 150 turf chemical outlets.

Equipment distributors are loyal to one primary line, such as Toro, Jacobson, and Ransomes; and usually carry a number of secondary lines, such as National, Cushman/Ryan, and Bunton that don’t compete.

Changes in equipment distribution are coming about for two main reasons. First, primary manufacturers have begun to make products which compete with secondary lines, such as walk-behind rotary mowers. For example, a Toro distributor who carried Bunton as a secondary line had this floor this year. To make it a little more exciting, Bunton started importing a greens mower. Another example is Bobcat (Wisconsin Marine) which
What are the main reasons for price cutting?

</tr>
</tbody>
</table>

was a common secondary line until Ransomes bought Bobcat.

The distributor is up tight because he is mainly dependent upon the primary manufacturer. The primary manufacturer is up tight because he is providing considerable support to a distributor who now carries a competitor's product.

Fifty-four percent of the distributors said primary manufacturers are pressuring them to replace secondary equipment lines with theirs.

Some distributors indicate the walk-behind rotary business is too competitive with John Deere and Exmark, as well as the primary manufacturers, entering the race. This may discourage primary manufacturers from expanding with products where short liners can undercut them.

The second major reason for changes in equipment distribution is the 20 to 25 percent distributors pay dealers. In certain areas, such as the Northwest and the Mid-Atlantic, distributors often have dealer networks. Distributors are seeking ways to save the dealer cut so they can be more competitive. Eighty-three percent of the equipment distributors in the survey said competition is increasing.

As weak distributors falter, healthy ones expand into their territories. Today's equipment distributor seems to need more territory than before to survive. The total number of equipment distributors may drop in the future as a result.

Instead of maintaining a complete inventory at many locations, the distributor of tomorrow may have a central warehouse and small sales and service outlets in branches. In this way, the distributor receives the advantages of volume buying without the overhead of separate full branches.

The service truck may replace the branch service department as well. Nearly 70 percent of the distributors responding now offer job-site service. A customer's mechanic can talk to the distributor's mechanic by phone to correct many problems and the service truck can arrive at the customer's location at the same time parts arrive.

Advanced factory parts delivery systems are enabling forty percent of the distributors to reduce their parts inventories. Computerization at the distributor and manufacturer level will increase the efficiency of parts departments.

Thirty percent of the distributors reported their service departments were a break even or losing proposition. It also takes them an average of five days to turn around a piece of A GREAT TRAILER for TURF MANAGEMENT!

There is a Capacity to Fill Your Needs from 1-Ton to 5-Ton

Steel structured for maximum life and minimum maintenance. Wells Cargo trailers are an easy, economical, efficient way to haul nursery stock, fertilizer, seed, sprayers, implements, mowers ... everything your job requires.

We have manufacturing sales & service facilities in IN, GA, TX, & UT and a national network of dealers to serve you.
