equipment brought to their shops for service. Faster, more profitable options to service are being sought. Distributors are not satisfied to act as service and parts suppliers to manufacturers when equipment is sold directly by the manufacturer to large buyers. Half the distributors said manufacturers they represent also sell direct to government or other large buyers within their territory. The assumption that the service business will make up for the loss in the sale is incorrect. A fifth of the distributors reported manufacturers also sell parts directly to equipment owners.

**Advertising support**

Overall, distributors of chemicals and equipment indicate a general satisfaction with support provided by manufacturers. Distributors receive a variety of sales incentives from manufacturers; including product brochures, advertising aids, show support, early order programs, and inventory financing packages. Manufacturers back up regional distributors with national advertising and marketing programs.

More than 80 percent of the 150 distributors responding said manufacturers share advertising costs. The most common assistance is direct mail and show pamphlets. Distributors use direct mail and show exhibits more than other marketing tools to support sales efforts. Half the distributors don’t use these tools despite assistance from manufacturers.

One third of the distributors use newspaper and telephone directory advertising. One out of nine buys radio time and one out of 20 buys television time.

District sales managers of some manufacturers have promotional budgets and supply artwork and copy for advertising in regional newsletters and magazines. A marketing allowance, based upon sales by the distributor, is another way manufacturers help distributors pay advertising and show costs.

Nearly 90 percent of the distributors believe national advertising by manufacturers helps them sell in their area.

Manufacturers often help distributors finance inventories. The best deal seems to be a no-interest, no-payment floorplan program offered by a major equipment manufacturer. If the distributor commits to an inventory by August 1, he will not have to start paying interest on the equipment until the following August.

Early order programs are common for both chemical and equipment distributors. Reductions of ten percent or more are offered to distributors who order equipment in the fall instead of the next spring.

Delayed billing up to five months is offered by many chemical manufacturers. For example, a distributor may extend customer billing 60 days and the manufacturer will extend the distributor 90 days.

Seventy percent of the chemical distributors polled are concerned about their liability in case of misuse of pesticides by their customers. Half provide seminars to help prevent accidents by customers. They feel pesticide certification is an adequate test of safe pesticide use, but they (80 percent) believe all applicators of restricted use pesticides should be certified.
A powerful combination with beautiful results. When you combat troublesome weeds and grasses with a tank-mix of Surflan® and Roundup®, you knock 'em down and keep 'em down. So tree and ornamental plantings, landascapings, fence-lines, roadways and other non-cropland areas stay clean, neat-looking all season long.

The one-two punch starts with Roundup delivering a quick, complete kill. It follows with Surflan delivering six to eight months of dependable residual control of 22 different weeds—including such unsightly, seed-germinating species as crabgrass, barnyardgrass, fall panicum, pigweed, johnsongrass and foxtail.

Surflan and Roundup in powerful tank-mix combination. Immediate kill plus long-lasting preemergence control. You just won't find a more efficient, economical way to get un-
MEMORABLE PERFORMANCES.

wanted weeds out of sight, out of mind. For Surflan, see your Elanco distributor. He also can show you the advantages of other cost-efficient Elanco products: Rubigan® fungicide, Balan® and Treflan® herbicides. Extra convenience for effective, season long weed control in smaller areas: Surflan is now available in a one-quart container for quick, easy tank-mixing with Roundup.

Selling Service

From humble beginnings, Michigan-based distributor Don Benham has built a $3 million company on the premise that service, not volume, is the key to staying on top of the heap in the highly competitive chemical market.

by Ron Hall, assistant editor

One idea and just five short summers ago Don Benham found himself with a used metal desk and a pair of card table chairs—one for him, the other for his sole salesperson, Paula Dietz. He housed his office in a warehouse behind a neat but small office complex near the scenic community of Walled Lake, MI, just outside of Detroit.

He'd put up everything he and his wife owned to start Benham Chemical Co., a chemical distributorship. In fact, he, his desk (which had been given to him by a friend), and his entire company occupied only half the warehouse. The other half was used by another company.

His idea was bold; to sell products from every major chemical manufacturer.

What he had going for him was 18 years experience in the chemical business (he had headed L & E Chemicals of the Long Equipment Corp.) and faith he could build a business based on the idea of service.

But, he had to convince the large chemical manufacturers he could serve them too, even though he would also be handling products from their competitors.

Benham, a large man with sharp blue eyes and streaks of silver in his hair, is a good businessman. He's also persuasive.

Gaining support

Although several manufacturers balked at his idea to represent all the major companies, he eventually gained their support, both in the form of selling him their products and extending him the credit to do so. First he reached an agreement with Estech, then with Mallinckrodt, picking up the Diamond Shamrock (now SDS) line of products shortly thereafter.

Benham was in business.

This August, Benham Chemical Co. celebrated its fifth year in business, its sales and office staff has grown from two to seven people, and the young company is anticipating a dollar sales volume of $3 million during 1984.

Benham and his close-knit staff have built the company to the point that it receives annual recognition
Freedom of Choice with ISC Controllers

The ISC family of controllers allows specifiers, contractors and property owners unparalleled freedom to design, program and operate an irrigation system without compromising any one element for the good of another.

Independent Station Control means just that...total design independence. The Rain Bird ISC-16, 24 and 32 station controllers free you to design an irrigation system to meet every precise watering need.

These revolutionary new microcomputer controllers feature:

- Independent Station Control...precision control to program operating days, starting times and running times per station...independently.
- Water Budgeting...watering times can be changed in 25% increments for all stations simultaneously at the touch of a single Water Budget Key.
- Preprogramming Capability...set the program in your office for field installation up to 24 hours later.
- Open Access Keyboard...accepts instructions in any order and at any time—even during operation.
- Back-up Program...waters every station two times per day, five minutes per time.

The Rain Bird ISC family of controllers means independence...it's a good feeling.

For a brochure on the ISC-16, 24 and 32, write:

General Manager Frank Forier also serves as Benham Chemicals’ credit manager and has been active in the Green Industry for 25 years.

from most of the major manufacturers it represents as one of the top, if not the top, distributors in the entire nation; all this in a service area that covers southern Michigan, extending well into the central portion of the state, and all of northwestern Ohio; and all of this in a remarkably short time.

Benham credits several factors for the success of his company, not the least of which was his initial decision to sell service as well as products.

The best, not cheapest
"Everybody is out trying to sell chemicals cheaper," Benham said. "Of course, we want to be competitive, but we want to sell the proper chemical for the proper job and for a proper profit. We are not always the cheapest place. We feel that service to the customer is more important than price and we feel most of our customers realize this.

"It takes time sometimes to convince people that they need service. Golf course superintendents recognize they need the service, but many lawn care customers take awhile to realize it. We didn’t build this business because we could sell it cheaper.”

In line with this philosophy, Benham keeps modest stores of chemicals at small warehouses at his home office in Walled Lake and also at Grand Rapids in Western Michigan as a convenience for customers who have jobs that need immediate attention. His main warehouse is in Dearborn where his company shares shipping facilities with Terminal Sales Corp. which serves retail outlets with many of the same products.

His sales people drive vehicles, either station wagons or vans, that can haul small emergency shipments. The sales staff keeps in contact with the home office with portable “beepers.” This is probably more of a convenience to his smaller customers who might need small supplies of a particular product to meet an emergency but Benham said he provides them the same service as the bigger accounts. The reason—as he discovered firsthand—is obvious.

"Five years from now the one-man, one-truck customer might be a major company,” he pointed out.

Experienced staff
Another factor in the successful Benham equation is the experience and quality of his sales staff which includes just about everybody on the payroll. Everybody sells, even the boss.

Frank Forier is the company’s general manager. Prior to joining Benham’s team he headed Terminal Sales Corp. and served as president of both the National Lawn and Garden Distributors Association and the Michigan Turfgrass Foundation (MTF). Paula Dietz is a former state turf extension agent, while Vic Bennett, who handles Toledo and northern Ohio, and Marvin Dominick, who operates in the Flint-Saginaw area, were both golf course superintendents and former customers of Benham. David Phillips, Benham’s western Michigan representative, operated the lawn care division of McDonald Nursery in Saginaw. Rounding out the staff is Office Manager LuAnne Susick who, although not technically a sales person, probably takes as many orders over the telephone as anyone, Benham laughed. And the boss, Benham, is a board member of the MTF and, on this particular afternoon, was knee-deep in the planning of a regional Professional Lawn Care Association of America meeting.

All of the staff is active in various industry associations, something Benham insists is essential to the health of his business and the industry in general.

"The companies (manufacturers) are getting smarter,” Benham said. "They want to see the background of the people selling their products.”

What’s ahead
Several major changes have occurred in the chemical business in the past five years and one of the most notable has been the rapid growth of the still relatively young lawn care industry.

"Our biggest increases in sales came from the lawn care market," Benham said. "I didn’t expect it to be that strong." Initially 95 percent of Benham’s business was generated from golf courses, and although that continues to be a big part of his business (about 50 percent), the lawn care industry has literally taken off. What is remarkable, he feels, is that it occurred during the worst economic period in the Detroit/Toledo area since the Depression.

"We grew during those periods when the industry went kaput,” Benham said. The company met its first-year $550,000 sales goal and has made “significant increases” each
INTRODUCING TORO'S FULL LINE OF REELMASTER™ GANG MOWERS.

Now there's a new breed of gang mower that's tough enough to take on any turf. From golf course to school yard, Park grounds to athletic field.

Our Reelmaster™ 5, 7 and 11 blade gang mowers deliver a superb quality cut and finished look. Whether you need a short, super-formal cut. Or a longer informal cut. Or something in-between.

Yet all three also deliver renowned Toro durability to keep you cutting.

We engineered all three with the bedknife optimally positioned in relation to the center line of the reel.

This cuts down on stragglers that can detract from the finished look of your turf.

All three were designed to discharge clippings in a high vertical arc, so they disperse and settle evenly. And all three reduce clippings accumulation and clumping, for the cleanest possible finish, even in wet grass.

In addition, we incorporated other great Toro features. Like our exclusive single knob bedknife-to-reel adjustment to maintain the quality of the cut. And seven spiders for increased durability. As well as Toro's proven gear drive for less downtime and fewer repairs.

Want to know more? Call your Toro distributor today. Ask him to tell you about the toughest gang on any turf:

Our gang.

THE PROFESSIONALS THAT KEEP YOU CUTTING.
year since. "We passed my five-year projection in the second year," he added. In more recent years he's been more accurate in predicting sales. "Last year we were within $14 thousand of what we predicted. We spend a lot of time working on our figures," Benham said.

There are no immediate plans for territorial expansion for Benham Chemical. "We've had to turn down business from other areas because we can't service them like we would like to," Benham explained. But, he continues to seek controlled expansion within his business area. "We have a lot more expansion and a lot more things to do in our own area, but we're actually having to watch a little that we don't grow too much and grow out of our location."

The growing sales of bulk chemicals to lawn care businesses seems to fit Benham's service philosophy perfectly and he is openly enthusiastic about it. His company entered into a unique agreement with Bulkem Inc., Normal, IL, last fall to be that company's exclusive representative in his area. "We stopped being competitors and started being the same company," Benham explained.

Although bulk chemical sales account for only about 10 percent of his company's business now, he predicts that by 1986 they will account for 40 percent. "It's changed this business entirely," Benham said. He predicted a growing market for bulk liquid fertilizer and revealed his company is contemplating putting up its own bulk fertilizer plant as well, perhaps as soon as next year.

There are several reasons, economical and ecological, why Benham believes the bulk chemical and fertilizer markets will grow. Price is the most obvious, particularly to companies that would use the contents of a 220 or 550-gallon tank of chemicals in a season. Purchasing by bulk also eliminates the problem of storage and disposal of empty, potentially harmful drums and containers. Some of the company's customers now have permanent tanks for each individual chemical.

The Benham Chemical Co. has come a long way since occupying half of the warehouse behind his present office although he still uses the same metal desk that was given to him by a friend. And he still follows the same business philosophy based first and foremost on service.

Benham is entitled to flash a wide smile when he relates how new acquaintances not familiar with the Green Industry react when hearing about his business. "The guy might look at me and say, 'Can you make a living doing that? What do you do in the winter?'"
The production field pictured produces the certified Penncross bentgrass that’s praised by the pros.

Distinctive stripes in the Penncross creeping bentgrass production field above mean the seed produced is certified Penncross seed. When Burt Musser of Pennsylvania State University released Penncross in 1954, he set up strict reproduction parameters for his three parent strains that assure uniformity, natural disease resistance and mowability that haven’t been matched in 30 years. Without the stripes in the field you don’t have Penncross on your green. And don’t let anyone tell you that you can mix Penncross with something almost as good.

Warren Bidwell, Turf Consultant, will speak to your turf management or superintendents group. Call Tee-2-Green Corp. for details.
Jenkins Machinery Co.

One of two original Ransomes distributors, partners Howard Jenkins and Ben Fuller switched from big equipment to turf.

by Bruce F. Shank, executive editor

Ten years ago Howard Jenkins was enjoying a successful career with a Caterpillar Co. dealer as divisional vice president, general manager. He knew backwards and forwards construction equipment distribution, sales, and service. But, he had just a homeowner's knowledge of turf.

Within two years he owned a Massey Ferguson dealership east of Oakland, CA, and soon was one-half of Ransomes' distributor network in the U.S.

Today, Jenkins and his partner Ben Fuller own one of 33 Ransomes distributorships in the United States. Jenkins Machinery Company is putting finishing touches on an office addition to its Concord facilities, located strategically among San Francisco, Sacramento, Stockton, and San Jose. Jenkins also has a branch in Long Beach, CA, and sales rep in Oahu, HI.

As the oldest, continuously operating Ransomes distributor, Jenkins has witnessed the development of the Ransomes distributor organization as the British manufacturer of reel mowers and tractors fought to take its place next to Jacobsen and Toro.

Earthmovers to mowers

Maybe it was the simplicity of a small Massey Ferguson dealership in Concord, then a sleepy rural community 35 miles east of San Francisco, that attracted Jenkins away from his Caterpillar job.

"This was a little country agriculture store in 1976," Jenkins reflects, "in transition from small agricultural to industrial as Oakland's and San Francisco's population spread eastward. Construction was beginning to pick up. The two-lane rural highway in front of our store became a major highway."

Then came the turf connection. A company called Pengro in South San Francisco needed tractors for its new line of reel gang mowers from Great Britain. The mowers were made by Ransomes and it told its three North American distributors at the time; Pengro, Turfco in Florida, and Duke in Canada; its reels were best adapted to Massey Ferguson and Ford tractors. Jenkins sold the Massey Ferguson tractors to Pengro for its territory, the western half of the U.S.

Ransomes was no youngster to the mower business, having manufactured the first reel mower in 1832. But the company had confined its marketing to reel products and to British-connected countries, such as Australia, Scotland, South Africa and Canada, until the 1970's.

Jenkins observed the potential of the Ransomes line and purchased Pengro. He also took on a former associate at Caterpillar as partner, Ben Fuller, to help him manage the company as it expanded.

A support network was created to enable the company to service customers in states as far away as Texas. It is based upon a complete parts inventory, an 800 telephone number for service, travelling service seminars, and mechanic-to-mechanic phone support.

"If we have to fly a mechanic to a customer in another state we will," Jenkins states. "Of course, we do all we can over the phone to make sure the trip is necessary. But, we believe perceived problems are as important.
