Britannia—The Short Course Long on Appeal

by Maureen Hrehock, managing editor

Why is the golf world focusing its attention on a golf course on a small Caribbean island? Like a phoenix, this course has risen from a rocky, tree-infested, sun-baked piece of island to become the world’s first “short” course. It is turning heads as well as stirring up debate on its future in the golf industry.

Looking out across the sun-baked golf course, Gene Bates squints against the brightness, deepening the crow’s feet in his already sun-tanned face.

In front of him sprawls Britannia—the current media darling among golf courses.

Britannia’s fame is two-pronged—from its designer, Jack Nicklaus, and its design—a “short” golf course, laid out to take one quarter of the land of a traditional golf course and half the time to play with a specially-designed ball. The concept has stirred up controversy and curiosity in the traditionally conservative golf industry.

Britannia, which opened last Christmas, is actually three courses superimposed on one 38-acre parcel of land: a 9 hole, 3,180-yard par 35 championship course; an 18-hole, 3,129 yard par 60 course and the 18-hole, 3,338 yard par 72 Cayman course. Three days a week the course is devoted to Cayman golf, three days a week to the championship layout and one day a week to executive golf.

The overall 88-acre, $110 million resort, when completed, will boast a 240-room hotel, condos and golf course clubhouse.

Grand Cayman Island is a British Crown Colony, the largest of three Cayman Islands with a population of 18,000. This mecca for scuba divers and turtle lovers is located 480 miles south of Miami and 180 miles northwest of Jamaica. What was once Blackbeard’s old haunt has evolved from the hub of pirating in the 1800s to, what some conclude, is its 20th century counterpart—a tax shelter for numerous American and foreign corporations. Now, it adds
another tourist lure—the first “short” golf course.”

Bates, vice president of Golfforce, Nicklaus’ design operation, built Britannia and knew her long before she became a “star”. What stands before the builder’s critical eye now is a far cry from the flat, scraggily Australian-pine-and-rock-infested hunk of land, baking under the British West Indies sun that confronted him a little more than a year ago.

“I remember thinking, ‘Good God, how do we build a golf course here?’” Bates recalls of his first look at the site.

But build a golf course he did—the first on Grand Cayman Island and the first of a new breed, the “short” golf course.

Bates had only a year to transform a forgotten piece of island into the embodiment of Nicklaus’ and senior designer Bob Cupp’s brainchild.

**Cream of wheat**

In November, 1983, crews began clearing the shrubs and pines that filled the area. Excavation was begun Dec. 1 with one large and one medium excavator and five dump trucks. (All equipment had to be shipped over from the States.) After down time around the Christmas season, it took until Feb. 15 to complete the excavation. Then, the arduous task of moving 110,000 cubic yards of dirt on only 40 acres to shape the course’s features began.

“Actually, we ended up moving about 220,000 yards because of the type of material we were dealing with,” explains Bates. “We moved it once to dry it and then again to shape it.”

That material was a soupy “cream of wheat” consistency combination of coral, rocks, roots, limbs from an old mangrove swamp and lots of peat moss (so much peat, it still leaches tannic acid into the water hazards turning them a cinnamon color.)

“The terrain was actually one of our biggest challenges,” Bates says. The land was very unstable and at an elevation of about plus 4 above sea level. We had to give the property definition. When you walked across it, it was like jello.”

The excavated swamp material was hauled up to dry, went through a cleaning and mixing process then hauled to shape the desired features, amounting to what resembles the mounding on Scottish courses. Bates, John Copeland and Jerry Cooper supervised the mounding which was planted with common bermuda, Argentine and Pensacola bermudagrass and bahia and weeping lovegrass, chosen for their drought hardiness.

“Understanding the local mentality was, at times, difficult,” concedes Bates. “You also have to be more precise building a short course because of the reduced parameters which added to the difficulty.”

Twelve Caymanians were used in the initial phases of the project. Americans were brought in to do the finishing work.

A chartered DC-6 flew in Tifgreen sprigs for the greens and Tifton 419 for the tees from Tifton, GA. The banks along the lakes are covered with 159,000 square feet of Tifton 419 sod.

After five days of planting the sprigs, another setback occurred. The course’s $400,000 reverse osmosis pumps used to purify the irrigation water broke.

“We lost half the tees we planted due to lack of water,” says Bates.

Water is a ghost that Britannia will probably never totally shake. Annual rainfall on Grand Cayman is about 65 inches a year. All the Caribbean islands are faced with water shortages. Britannia can use a minimum of 100,000 gallons a day. Five gallons of feed water going through the reverse osmosis system will yield one gallon of usable water which is then stored in a 500,000 gallon reservoir.

The reverse osmosis pumps will hopefully stave off any severe water problems. Cayman water, at $17.58 a gallon, is cost prohibitive to use. When it does rain, the showers can be so intense for a short amount of time they cause flooding and puddling. Britannia’s designers foresaw this trouble spot as well as the fact the course is close to sea level, and designed a sophisticated drainage system to get the water off the course fast. There are even drains in the grassy swales. The course is currently irrigated with a Toro Vari-Time 4000 automatic, double-row, hydraulic valve and head system.

The common bermuda fairways were ready to be mowed within three weeks of planting. Sulfur and gypsum were used to combat salt and Ph problems.

Green size, on the average, is 3,500 square feet with the smallest of 1,900 feet. The Nicklaus’ design characteristic of “movement” on the greens and deep bunkers is particularly evident at Britannia.

Starting from 4 feet, Bates created 12-foot banks along one of the main water hazards. More than $20,000 in rock work stabilizes the banks of many of the waterways on the course.

**Maintenance**

Course superintendent Jimmie Griffin is a human cyclone. This hulk of a man seems to be everywhere at once, buzzing the course in his golf cart, inspecting work, having meetings, keeping Britannia’s maintenance routine with the careful eye of a Swiss rail conductor.

“This course is a challenging, intriguing project. It’s always the hardest being the ‘first’ of anything,” he says referring to Britannia’s distinction as the first course on Grand Cayman. “Most of the locals here have never even seen a golf course let alone worked on one.”

He has a crew of nine Caymanians.

Greens and tees are his priority maintenance areas. The mounds on the course are not irrigated to save precious water. Where the water situation and labor present his two biggest headaches, turf disease problems give him few grey hairs.

“There’s not much problem with diseases here. We take care of armyworms with Dursban and diazinon.”

Rotating the course among the three playing options creates more work in setting up the markers and flags every day. Monday, Wednesday and Friday are championship layout days, Tuesday, Thursday and Saturday are Cayman golf days and Sunday is executive golf.

Shipping costs of an additional 27.5 percent inflates Griffin’s $600,000-a-year maintenance budget. All his Jacobsen equipment (walking greens mower, riding triplex and hydraulic
ATOM™ PACKS THE POWER FOR TROUBLE-FREE STARTS

Permanently eliminates troublesome points and condensers . . .
the primary cause of engine failures

Atom—the revolutionary electronic ignition module that insures fast starts, dependable performance. Seven types available to retrofit on virtually all small engines . . . from lawn-mowers to chain saws, string trimmers to outboards and high-performance go-karts.

Easy installation: no major disassembly, no fine adjustments or soldering. No moving parts—maintenance free. Provides automatic timing, increased spark burn time and multiple shower of sparks for improved combustion, dependable starting and smoother running.

Power Lawnmower Parts: the POWER in the replacement parts industry for almost a quarter of a century. In addition to Atom, we manufacture and stock over 3000 replacement parts and accessories for lawn-mowers, chain saws, string trimmers and small gas engines. For Reliability and Performance, count on Atom . . . and Power Lawnmower Parts, Inc.

Call or write now for your FREE 132 page full line catalog.

WHEN YOU NEED THE POWER WE'VE GOT THE PARTS.™

Circle No. 147 on Reader Inquiry Card
A Golf Ball With the Midas Touch?

It looks like a regular golf ball, more or less, and that’s where the resemblance ends.

The Cayman ball, the result of two years and $100,000 in research and development by Jack Nicklaus’ MacGregor Golf Company, has made its debut to mixed reviews.

When everyone is trying to make the ball travel just a little bit farther, why would a ball that is designed to go only 125 yards when hit with a driver and weighs half of what a traditional ball weighs, merit the kind of attention the Cayman ball is getting?

First, a profile of the ball itself.

The Cayman ball is named after Grand Cayman Island in the British West Indies. It is on this Caribbean island that Jack Nicklaus built Britannia, the first “short” golf course designed to be played with the Cayman ball.

The Cayman ball has a bramble pattern covering made of thermoplastic material; the dimples being convex instead of concave. Both the traditional ball and Cayman are 1.68 inches in diameter, but the Cayman ball only weighs 1.62 ounces, with the traditional ball weighing in at 1.66 ounces. It’s so light, it floats. (Britannia’s pro Cary McGaughey’s driving range is situated so the balls are driven into the North Sound. The balls float back to the shore and they’re scooped up with a net.)

The ball is made by mixing a thermoplastic polymer with microscopic glass bubbles and a chemical blowing agent that is injected into the ball mold cavity. The Cayman ball permits the “short” game to be played in ½ the time with ½ the clubs on ½ of the land of a traditional course.

McGaughhey says a golfer can still enjoy the competitive factor and challenge of golf playing with the lighter ball.

“You find yourself starting to think more about the game. You have to look at it as enjoyment,” McGaughey says.

Maurice Cullen, general manager of Britannia, which is owned by the Canadian Ellesmere Ltd., says those who have played the course “have been fascinated by the game.”

“One should come and play the course and then pass judgement,” he continues. “It is a marvelous teaching aid as well as a means to improve one’s traditional game.”

As general manager, Cullen sees the lost income from cart rentals (few people would need a cart to play the short course) being compensated for by more people being able to play the course on a reel) have to be shipped from the States. He employs his own maintenance man.

One of the touted virtues of the Cayman course is that because of its size, the way the Cayman game is played and the ball that’s used, it reduces maintenance. Griffin said he’s noticed less divots because “with the Cayman ball, you don’t hit down on the ball; it’s more of a sweeping motion.”

Future plans call for more trees and vegetation to fill out the planting scheme once the course stabilizes.

New Modified Golf Association Brings Short Game to the Fore

It was 30 years in the making, but worth the wait.

At least that’s the way Florida golf course architect Bill Amick looks at it.

Amick is founder and president of the newly-formed American Modified Golf Association. Chartered in March, the non-profit association and its seven-member board of directors are dedicated to promoting and governing the short course golf concept, brought to the center of attention recently by Jack Nicklaus’ new “short course.” Britannia, on Grand Cayman Island and with the Cayman ball, designed to travel only half the distance of a traditional golf ball. The association is currently in a membership drive.

“We believe in what Jack is doing,” says Amick.

But Amick’s interest in the short game started long before the Golden Bear’s Britannia was even a glimmer in its architect’s eye.

“Back in the ’50s I had the privilege of working with Bill Diddel on a reduced yardage, less lively ball, but we never got one that was really satisfactory,” explains Amick.

They tried again in the late ’70s, but came up with nothing they felt could be marketed in mass quantities.

It wasn’t until Nicklaus’ MacGregor company introduced the MacGregor 50 and christened it the Cayman ball, that Amick decided the time had come to get together everyone interested in the short course concept.

A seminar was held in Daytona Beach in December of last year with about 45 attendees, including representatives from the USGA.

Is there a minimum acreage for Cayman golf courses?

“The minimum acreage depends on whether you want a nine or 18 hole configuration, the shape of the property, and the landscape; whether it has creeks, lakes or swamps. I would say 20 acres would be the minimum for a nine-hole Cayman course and 40 acres for an 18 hole course.”

Even with the pitfalls of building a golf course on an island in the Caribbean, Bates is proud of the course and of the friendships and camaraderie that grew out of the experience.

“When we started to build it seemed as if everything that could go wrong did—no rain, equipment breakdowns, labor problems, but no one was willing to accept defeat. I’m very pleased with the way the course turned out, except the water situation,” says Bates. “Bob Cupp and Jack Nicklaus are the geniuses that made this thing work. They’re on the same wavelength. People have been talking about building a golf course here for years, but no one was willing to try it.”

Until now.
The Cayman Controversy:  

The Emperor's New Clothes?

by Dr. Michael Hurdzan, president, American Society of Golf Course Architects

Let's put Cayman golf into perspective.

Is it a great idea, or just a passing novelty? As a golf course architect, I have some strong personal thoughts on the subject.

Before expressing my views, I would like to clearly state that the American Society of Golf Course Architects has no formal opinion on this concept, but it does strongly support any idea that helps this great game grow and flourish. An opinion poll of our members would be expected to vary as widely as one taken of any other golf-related professional organization on whether it is a good or bad idea.

Putting things into perspective means looking at historical facts and present developments, then evaluating the relative value of an idea within the context of current society. The relative worth of an idea can only be arrived at by examining what the idea "is" and "is not" and the proper weighting of its positive and negative aspects.

Let's begin by examining what this "short ball" concept "is" and "is not." The concept of:
- a reduced distance ball is not new.
- a reduced yardage golf course is not new.
- short ball golf is probably not the wave of the future.
- Cayman golf is not golf under USGA rules.
- short ball golf may not be economically viable.

However, the concept:
- is good for golf because of the interest and publicity it has generated.
- is a good teaching tool.
- is an alternative to golf much like a form of miniature golf.
- is, in my opinion, a great publicity gimmick for Grand Cayman Island, home of Britannia, Jack Nicklaus' short course.

Now, I will try to substantiate these facts and observations.

As I said earlier, the idea of a reduced distance golf ball is not new and originated when golf was still played with gutta percha golf balls. A small item in the Nov. 6, 1891 issue of Britain's Golf suggested using "hand-fives" balls that "... do not carry so far, while at the same time ... let you know when you made a clean drive. This is important for those whose space is limited, and it also enables the learner to do more driving with less walking."

A quick check of golf ball patents identified many patents for a "short" ball with the oldest being issued to a Francis Atkinson (Patent No. 456,920) of New York City in 1891: almost 100 years ago.

Some of the more notable patents since then have included balls made of sponge rubber (1922), yarn coverings (1929), and cork (1920). Of particular interest to me was Patent No. 2,364,955 issued in 1944 to the golf course architect William Diddel. Diddel, recently deceased, had earned a
national reputation, among other
tings, for shooting his age more than
1,000 times. He described how his in-
tion could reduce the acreage for a
golf course down to 15 acres. His golf
ball design used butyl rubber with a
filling of magnesium oxide and the
ball was claimed to have the "feel of a
conventional ball."

Then Joseph Gentiluomo of Sche-
nectedy, NY, who was awarded Pat-
ent No. 3,940,145 in 1976, for a
"restricted trajectory golf ball ... hav-
ing a flight range of approximately
one-half to one-quarter the range of
regulation balls."

So you see, the idea of a short ball is
not new.

Neither is the idea of a reduced
yardage golf course.

The earliest of these courses were
purportedly designed by sea captains
back in the 1800s near port cities so
they could pass the time between voy-
ages. (Perhaps these men used the
hand-fives balls described earlier.)
Since that time, there have been any
number of patents issued for "short"
golf courses or golf facilities placed on
small acreage to date.

Wave of the future?

None of these concepts has gained
wide support or attention which
brings me to my third "not" point; and
that is short ball golf is not the wave of
the future.

The reason for believing that re-
duced distance golf balls and limited
acreage golf courses are isolated nov-
elties is purely historical and intu-
itive. If these ideas have been around
for nearly a century and have not
caught on, why should they now?

We have always had limited space
for golf in highly populated areas, and
with our modern high speed trans-
poration, open spaces are only min-
utes away. Besides, we are also
beginning to develop more previously
unused land for golf courses, such as
flood plains, landfills, airport clear

Through the years, the golf ball has
undergone many and dramatic
changes. In the 1890's Game of Five
balls or Hand Fives balls were used,
covered in leather. In 1902, the
bramble-pattern Haskell ball with
gutta percha covers became popular.

Wilson introduced the Pro Staff in
the 1980's with truncated dimples
for better resistance to wind. In 1984,
the Cayman ball was introduced by
the MacGregor Golf Company,
weighing half the weight of a
traditional ball and designed to go
half the distance.

The rules of golf don't specify what
kind of ball these yardages apply to so
one must assume it applies to all golf
balls, including the short ball. Ac-
cording to USGA rules, all of the

Grand Cayman holes are Par 3s. It is
not likely that the USGA will write
new yardage rules for every new golf
ball, therefore, say what you will, the
Grand Cayman course is only a Par 3
course.

If we carry this logic a step further
on the golf ball being able to reduce
the acreage needed for golf courses,
then the no hook or slice Polara golf
ball may be an equal boon to golf. Af-
terall, area is a function of length and
width; the short ball reduces length
and the straight ball reduces width.

My last point in the "not" column
deals with the possibility that the
short ball course may not be econom-
ically viable.

As a dedicated golf traditionalist, I
have strongly denounced the golf cart except for use by medically or physically impaired golfers, or in areas of extreme heat or slopes. The only argument that I get from golf cart supporters is “yes, you are right, but without them, we could not financially survive.”

I can’t believe anyone would take a cart to play short ball golf, so that represents a substantial loss of income to the course.

Secondly, Jack Nicklaus, designer of Britannia, the first “short” course to be built, was quoted in the June 1984 issue of Golf Digest magazine as saying, “A 150-acre municipal course that would normally handle 200 people in one day could handle up to 1,600 if it were designed for the short ball.” His next sentence is, “the green maintenance would be less because the ball is lighter.”

Now, think about that. First, the time to play golf is not a function of the cart ride between shots, it is the time the golfer takes to find his ball, cuss, and pound his club on the ground, and then replace his divot.

And since on short ball courses people are walking anyway and putting will be the same, how do you save any time? You will still be loading the golf course on seven minute intervals and I believe the playing time on a completely filled, short ball golf course will be closer to four hours than to the touted 2.5.

And even if you could put 500-600 people per day through a course, can you imagine what problems of spike marks and compaction you would have? Less green maintenance—not likely. What about the cost to maintain fees and bunkers? Actually the only reduction in maintenance is in fairways and roughs and then all we are doing is concentrating the divots into smaller spaces.

The parking lot to hold the cars that people come in would probably be nine or 10 acres in size.

Good for golf
Well, if this is what short ball is not, then what is it?

First, I believe it is good for golf for it has generated lots of interest and discussion about golf in non-golf publications. This extra exposure is sure to help the game. People may be tempted to try the sport simply because it is a current topic of discussion at the office, cocktail party or social gathering. There is a certain lure to try the short ball alternative to golf for no other reason than curiosity or to become the local resident expert.

The short ball idea is a great teaching tool and one that is not limited to the MacGregor golf company $2 per ball equipment either, for almost any sporting goods store carries sponge, plastic or whiffle balls for a lot less money.

But, if you can afford them, the Cayman balls would turn many a backyard into a nice driving range, (it already has at my house).

Thirdly, short ball golf is an alternative to golf much like a big version of miniature golf. It may become a novel attraction as “something to do,” but it lacks the essential lure of golf and that is the thrill of seeing a well struck shot soar through the air for a few brief seconds, until it is almost out of sight.

Why else would some Japanese spend hours and hours per week on a driving range and never get to play golf. I doubt these folks would be so dedicated if all they had to hit were continued on page 97
If your irrigation system is more than 3 years old, TORO can improve it...

even if it’s a TORO system!

TORO has made so many advances in technology over the past three years that now you can do a far more efficient irrigation job, and save money in the process! It may be as simple as switching to one of our new VT-3 Video Controllers. If your system is more than 10 years old, no matter whose it is, it should undergo a full evaluation now, before problems arise. If you're planning a new course, let us demonstrate exactly how TORO can provide the best solution to any irrigation challenge. New course, conversion or up-grade... call The Man from TORO today! You'll find him nearby.

OK, PROVE IT!
Talk is cheap, but your talk sounds good to me. Yes, I'd like to consult with a TORO irrigation specialist at no cost or obligation.

</table>
... And From the Superintendent’s Viewpoint

Whether you’re for it or against it, the short course concept is certainly a topic that stirs up mixed reaction among superintendents across the country. Most agree in concept with the idea, but for some, doubts in other areas surface. Will a short course cut down maintenance costs? Will it be the wave of the future? Does it have a place in areas across the country? Superintendents contacted by WEEDS TREES & TURF were candid and insightful. Their observations...

MARK KLIMM, Country Club of New Seabury, Mashpee, MA. — “I think the concept is good, but has a limited use. I know the type of clientele we have here wouldn’t like it. We are part of a 2,300 acre residential condo resort development. Money and time aren’t objects for the people here.”

NEIL “BUSTER” BUSTAMANTE, Mauna Lani Resort, Kawainae, HI — “You’d think with land being as expensive as it is in Hawaii and hard to come by, the idea would catch on here. But it hasn’t and I don’t think it will. I’ve been in the golf business 23 years in Hawaii and people come out to play a golf course, not a rinky-dink course. One course on Maui went from an executive course to a traditional regulation course because people want the longer course. It’s hard for me to fathom the traditional golfer going into that (short course) market. Men look for distance, ladies are more finesse players. It probably does have an audience, though, among the elderly, kids and people learning how to play.”

FRANK DAVITT, Allentown Municipal Golf Course, Allentown, PA — “I think there’s definitely a place for it. What I’d like to see is for the course to be toughened up, not modified. I know we could use a course like that here.”

BRIAN MORRIS, Silverado Country Club, Napa, CA — “Golf is too much of a traditional game for the short course idea to catch on. I think most will stick to a Par 3. Play would be limited on the shorter course because people would be playing the same fairway.”

JON SCOTT, Grand Traverse Resort Village, Acme, MI — “I think it’s a fantastic idea. It will be a very positive influence on the game and the number of people who play it. The primary benefit to the turf industry will be less cost; less cost to build, less cost to maintain and most likely, less cost to play. This translates directly to more golf courses, more income for the turf industry and more golf for more people, especially young people and seniors. It could just be the booster shot golf needs right now. As I understand it, the game is still played with the same clubs, skills and strategy. If the long ball hitter’s ego doesn’t get in the way, the short game and putting may once again be championed. A short course could be in our future here. We have two courses now, a championship course of about 7,200 yards and a 6,700-yard course. Naturally, the short game will be looked upon with great apprehension by the ‘purists’ and I respect their concern. However, just as executive and Par 3 courses have their place in the game, so will the short ball courses.”

PATRICK GREEN, World of Golf, Florence, KY — “Americans like to hit the ball hard and see it go far. I don’t think the idea will catch on here. It would probably be real popular in Japan where land is so expensive. We tried the lighter balls here. People just weren’t that excited about it. It’s OK for the driving range, though.”

WILLIS FULLER, Eufaula State Park Golf Course, Eufaula, AL — “I think the game does need to be shorter. It takes too long for most people to play now. It would relieve traffic on the longer courses. We have lots of seniors here who would rather play a short course. It’s not for everybody, but it certainly has a place. With the price of chemicals and machinery, it would also help maintenance costs.

TOM FLAHERTY, Dennis Highlands, Town of Dennis, MA — “The concept is a good one, but I don’t know of any club, resort or private concern that could afford to pay a superintendent the same salary he’d be getting on a larger course unless they put him in charge of the entire operation.”

JOE INMAN, The Breakers Palm Beach, FL — “It’s a good concept. It’s almost like another sport, though. Being a resort hotel, we’re always looking for alternative sports for guests. We could fit this right into our schedule. The more you have to offer, the more you can advertise. It would also draw a lot more places into golf that may not have golf now. I don’t see it as competition to the traditional game of golf or regulation, championship golf courses. It’s an alternative. I’ve got to hand it to (Jack) Nicklaus. He’s gotten everything he can out of the game and now he’s trying to give something back. It’s going to help the whole golf industry more than it will ever hurt it. I just wish I had thought of it.”
