foot swath at speeds up to 10 mph. Add weight trays which can carry up to 200 pounds each, and you’ll get maximum penetration in even the most heavily compacted areas.

The Renovaire will adapt to various soil conditions by doubling the tines, or by changing tines: coring tines for regular soil, slicing tines for drier soil, and open spoon tines for areas needing renovation. So, you can use your Renovaire throughout the year, and take the Ryan touch to every part of your golf course.

A full line of Ryan reliability.

The Ryan line of dependable, work-proven performers also includes the Greensaire 16; the durable Jr. Sod Cutter; the Ren-O-Thin® III and IV with interchangeable reels, perfect for breaking up cores and dethatching greens and tees; and the Mataway® heavy-duty power rake, now with an Overseeder, lets you dethatch or deep slice, overseed, or do both at the same time. All are designed to provide years of heavy use with few repairs. All are backed by a name synonymous with great golf course maintenance.

Ryan. The company that’s been bringing out the best in golf course superintendents around the world for over 30 years.

For more information or a free demonstration of the Ryan Touch on your golf course, contact the Ryan dealer nearest you today. Or call: 402-475-9581.
tional Bazaar near the Princess regularly picks the nuts off the resort's lychee trees for use in their specialty dishes.

No chemical controversy
Island landscaping is similar to the tropical areas of Florida, but Russell says differences do exist. The biggest is the soil.

"Culturally, their soil's great compared to ours," he says. Most soil on the property is a specially mixed combination of sand, peat moss and "lots of fertilizer." Russell uses a slow-release sulfur-coated 10-10-10 in the mix.

He fertilizes turf four times a year using a sulfur-coated 32-16-4. Last year, Russell aerated for the first time. "I saw a big improvement, but we only went one way," he says. "We're going to do it again."

Turf diseases are rare, which may be because of the constant climate. Temperatures rarely drop below the 50s at night or above 90 degrees during the day.

Although snails sometimes give him problems, Russell applies insecticides only as needed. "The more you spray, it gives the pests a chance to build up resistance."

When he does treat the area, he uses Sevin, diazinon or Dursban granules. Royal palms, many of which were wiped out by lethal yellow, are sprayed three times a year.

The Bahamas does not have any agency similar to EPA. Chemical barrels are disposed of at the city dump. And should a chemical, such as diazinon, be banned in the states, Russell says it may still be possible to get it in the Bahamas.

But living on an island does create problems in getting equipment. Most of the equipment used in Freeport is Jacobsen, so that parts can be exchanged between the golf courses and hotels. Russell, however, also praises his Bobcat rotary mowers and Toro riding mower.

Russell works closely with the Princess' golf course superintendent Shervin Bastian in sharing both equipment and turf knowledge.

The two golf courses compromise seven miles of land adjacent to the hotel. But, then, that's another story.

— Heide Aungst
That's Treflan®. It controls annual grasses and broadleaf weeds so effectively, it could easily pass as an "expensive" preemergence herbicide.

But don't let the expensive look fool you. The fact is, Treflan is the lowest-priced herbicide there is for established ornamentals. At less than $1 per 1,000 square feet, nothing beats Treflan on price or weed control. Nothing.

Treflan is labeled for use on more than 175 different varieties of ornamentals. Just spread it on evenly and water or rake it in. It's that easy to get expensive-looking, full-season weed control. Treflan is also available in quarts and gallons.

The drum roll, please!

Ladies and gentleman, Landscape Management's first Landscape Manager of the Year is Michael Ray Hugg, landscape supervisor for Metro National Corporation, Houston.

The innovative Hugg has been landscape supervisor since joining Metro National seven years ago. He oversees a staff of 22, adding eight during peak season.

That staff is responsible for 19 company properties from apartments to hospitals and 11 city street esplanades.

On-the-job innovation

Hugg is innovative, having designed a very efficient computerized sprinkler system tied into one of the company's energy management systems. "The automatic controller is replaced by tying the wires into a series of multiplexer boards depending on how many stations the system has, which in turn is tied into the building's energy management panel."

With this system, Hugg has the ability to set and change start dates and times from a portable computer in his office. "I can also turn any sprinkler system that is tied into an energy management system on or off without

Metro National pays for all construction and maintenance of five city esplanades.
A Winning Line-up from Rain Bird

Water management is no longer just a hit or miss game played only in the minors. Today, it's the real thing, and to be a winner you need real products.

leaving my office," he adds.

"I have almost unlimited power in start times. If a station normally has a 20-minute run time on a conventional clock," he explains, "I can have that station run two minutes at a time, with 10 different start times if I want to." This eliminates wasted water due to runoff and saves money, he says.

The operation runs through facilities management software and a modem used to access any sprinkler system in the company that is tied into an energy management system. For this, Hugg credits Metro National's construction management, which sets up the energy management programs. "The operation is similar to golf course irrigation programs run by computer," he says, "but with many more options and capabilities."

While the Houston area does experience drought conditions at times, Hugg says the local government has not set a permanent restriction on water usage. But, he adds, "I look for that to hit our area in the not too distant future."

Successful schedule
This efficiency has resulted in an effective turf maintenance schedule which Hugg developed for use on all of the property his staff maintains.

"The preventative pesticide program takes care of most of the problems," he says. "We go back and spot treat where necessary."

His program includes fertilizing five times yearly. The first application, in early spring, is done in combination with atrazine for pre-emergence weed control on the St. Augustine grass which covers all of the company's property.

An application in early June is supplemented with Dursban to take care of the first wave of chinch bugs, which Hugg calls a major problem.

In mid-July, he lays down Oftanol granules to finish off the chinch bugs and prevent grubs. His crews spot treat with liquid Oftanol if areas show signs of grub activity.

His fungicide program includes three applications of Chipco 26019, one every 28 days beginning in September. This takes care of the brown patch that occasionally attacks the turf. His ornamental care schedule includes two applications a year of a pre-emergence herbicide. The company employs one full-time sprayer to make all these applications.

Hard times
Unfortunately, Hugg can't do a lot of the things he'd like, even though his work is good enough to have won four PGMS awards in 1985. Economically, Houston relies heavily on dollars from the oil and petroleum industry. With crude oil prices falling during the past five years, the oil companies have hit on hard times. As a result, the city economy has shrunk.

Metro National has felt some of this depression, which has forced it to cut back on its budget somewhat. Hugg has to present a pretty good case to get additional funds. He says that the company has been adding new property which he and his staff will have to maintain. He needs more labor but doesn't expect to get it.

"We have to compete with outside companies, yet we spend more than they do," he says. But Hugg does find a benefit from the lean times. After the labor cuts were made, he found his department ran more efficiently.

Meeting personal goals
Hugg lists a number of important future personal goals. They include obtaining a nursery license in order to buy plant materials wholesale; taking advantage of volume and early order discount programs when buying chemicals and fertilizers; setting up an in-house mechanic shop for daily maintenance and repairs of equipment; doing all of Metro National's new and renovation landscape construction in-house at cost; doing a majority of landscape design work to save the company landscape architect fees; and setting up in-house interiorscape maintenance and construction.

MAVRIK®
ALL THE AMMUNITION YOU NEED.

Insect and mite protection from tee to green.

MAVRIK AQUAFLOW® Insecticide is a broad spectrum insecticide and miticide—in fact, it eliminates practically every problem except divots.

MAVRIK goes after pests that live in turf, in shrubs, in trees. It kills chinch bugs, sod webworms, mites, cutworms, leaf feeding caterpillars, aphids, whiteflies, leaf beetles and others.

There has never been a single product that handles so many pests, while being so safe to plants, convenient to use and easy to apply. MAVRIK is a non-restricted material, and it has been tested on more than a hundred ornamental species without a report of any phytotoxicity.

MAVRIK is a water-based flowable, so it's easy to mix. There is little residue and no odor—you can use it Friday afternoon and the members won't get their noses out of joint over the weekend. After a spray has dried, it's easy on bees. And it won't harm bird species.

You won't find the convenience and broad spectrum coverage of MAVRIK in any other product. And since MAVRIK is available at your local distributor, all you have to do is ask for it.

SANDOZCROP PROTECTION

Use pesticides effectively. Read and follow label directions carefully.

There’s nothing like a steep slope to give you a new slant on front mower performance. Especially when you compare a John Deere front mower to the leading competition.

So what makes a John Deere front mower climb better? A combination of two things. Sure a lot of front mowers have what they call a traction assist device. But only John Deere has a true differential lock for positive pulling power.

Standard equipment on the F930 and F935 (optional on the F910, F912, and F915), John Deere’s exclusive hydraulic weight transfer valve lets you shift the weight of the deck to the drive wheels for added traction on the go.

Only John Deere gives you a true locking differential for positive two-wheel traction assist in slippery conditions.

It’s also true that some front mowers have weight transfer control. But once again only John Deere puts the control at your fingertips. So you can hydraulically dial in more traction on the go.

And since a John Deere lets you engage both these features at the same time, our front mowers give you the most efficient pulling power in the business.

Power that adapts to a lot of everyday
John Deere's view of front mower performance is slightly different from the view held by the competition.

Two pedal speed and direction control helps reduce fatigue. Provides steadier, less jerky speed control on rough ground compared to heel and toe, single pedal units.

Or compare our straight forward two-pedal speed and direction control to some of the backward controls you've been behind. The more you compare, the more you'll see that when it comes to front mower performance, we're doing more than spinning our wheels.

Ask your dealer for a demonstration soon.

Nothing Runs Like a Deere®

sumed interiorscape maintenance in January after having subcontracted to an outside firm for two years. He hopes to take the Interior Horticulture Certification exam soon. Technically, he says, he is not eligible to take the exam. A certain amount of time doing the interior work is required before the exam can be taken. After he is back into it for a while, though, he says he will take the test.

Hugg lists his most important accomplishment in the past year as "re-designing plans for Spring Shadows Pines, a nursing home, that a landscape architect had drawn but the owner of our company was unhappy with. I added in a lot of azaleas and annuals for color. I also directed the landscape construction for the four-acre facility."

**Working with a crowd**

"Metro National has nine different property managers who I have to cater to," Hugg says. "I also maintain the homes of 12 executives of the company who all have their personal tastes. Everyone, including myself, has their own ideas and desires, but many times all is overridden by the owner of the company, who has the final word."

Fortunately, Hugg says he has run into few problems with his supervisors. "The good thing is, all of the property managers work for the same company," he adds.

**Looking ahead**

In the next five years, Hugg wants to put all inventories and maintenance schedules on computer. He only recently has had a computer put into his office, but plans on computerizing inventories and schedules this year.

During the past year, Hugg has been working on a feasibility study of costs to build greenhouses and hire a grower for growing annuals and interiorscape color programs in-house. "But I haven't convinced myself that it's worth it." The study was borne out of frustration from not having the plants there when they were needed, he says. It might be just as cheap to continue buying from outside growers anyway, he adds. Even if Hugg finds it cost-effective for the company to have its own greenhouse, he would still have to convince company management.

If financially possible, he would also like to open a nursery re-wholesale distribution center and a retail garden center on Metro National land. Last year Metro National seriously thought about building a golf course on some of its land, Hugg says. "The owner decided to table the idea, primarily because of the economy," he notes. "If the economy improves and the idea is reborn again, I hope to contribute to the design and outline and implement a maintenance program."

And almost certainly, bring in more awards for himself and the company.

**Turf Vac**

sweeps both turf and pavement

The only sweepers with unique all-vacuum design that operate on both turf or pavement, wet or dry. Safe, powerful air picks up bottles, cans, as well as fine clippings to reduce thatch buildup.

- Sweeping widths from 4' to 30'.
- 6"x10' hand intake hose available.
- Hard surface filtration.
- No fingers or brushes to wear out—picks up by air only.
- Ground dump & power lift dump.
- Tow type or self-propelled.
- PTO models available.
