Irrigation products combine efficiency and durability

Toro's Irrigation Division has introduced new irrigation equipment designed to operate systems efficiently. The 570C-12P (pictured), the latest in Toro's 570C Fixed Spray Series, features the company's Conilip™ seal and cap configuration for improved seal and reduced flush action.

With the 570C-12P, the Conilip™ series includes three-, four-, six-, and 12-inch pop-up models with 75 different nozzles.

Also, Toro has put a stainless steel sleeve around its 610 gear-driven rotary sprinkler.

The company has also introduced two Custom II series controllers available in either hydraulic or electric with a choice of eight or 12 stations.

Aquatic herbicide in gallon containers

Rodeo aquatic herbicide from Monsanto is now available in one-gallon containers. Users can order by telephone for direct delivery.

"This will be very convenient for those who have just a small problem with aquatic weeds in drainage ditches or small retaining ponds," says Monsanto's Sharon Gabel. "It will be especially helpful to owners of small recreational swimming and fishing lakes who are troubled with cattails which have taken over the shoreline."

Tree transplanter is completely self-contained

The tree transplanter from Mid-Dakota is completely self-contained, can be towed by anything and goes anywhere a garden tractor goes without damaging lawns or underground sprinkler systems.

Mar-Mac staples, sod pins and "L" shapes are made to meet all current geotextile standard installation specifications, and Mar-Mac can also make staples, pins or "L"s to meet any customer specification.

Some of the many applications of the Mar-Mac products are erosion control and foundation stabilization on golf courses, airports, strip mines, and building sites.

Rodeo is a broad-spectrum aquatic herbicide that provides effective control of more than 160 emerged grasses, brush and broadleaf weeds.

NOW, THE FIRST NAME IN FUNGICIDES IS THE LAST WORD IN CONVENIENCE.

INTRODUCING NEW CHIPCO 26019 FLO.

The easy way to stop major turf diseases for up to four full weeks.

Thousands of golf course superintendents have discovered one important fact. You just can't beat Chipco 26019 fungicide for controlling turf diseases.

And now you can get all the advantages of Chipco 26019 wettable powder in a convenient flowable formulation. New Chipco 26019 FLO.

Like the wettable powder, new Chipco 26019 FLO offers unsurpassed protection against major turf diseases, including Helminthosporium Leaf Spot and Melting Out, Dollar Spot, Brown Patch, Fusarium Blight, Red Thread, Fusarium Patch, plus Gray and Pink Snow Molds.

Chipco 26019 FLO also delivers the same long-lasting residual control. In fact, both Chipco 26019 formulations protect your turf for up to 28 days.

With Chipco 26019, you also get the added benefits of convenience, no phytotoxicity, pesticide compatibility, low toxicity and no corrosiveness.

Wettable Powder or new FLO, it's easy to see why Chipco 26019 is the Number 1 name in turf disease control.

Power saw introduced at Landscape Expo

The Linear Link, a portable power saw from Progressive Power Tools, was unveiled at the Landscape Exposition in Chicago, March 3-5.

The saw leaves a smooth cut on landscape timbers used for building planters, decks, railings and other structures. The saw can cut notches without overcutting, has an eight-inch cutting capacity and cuts angles to 45 degrees.

Safety features include a full upper blade guard, a non-removable tip guard and rear pivoting blade guard.

Blue colorant marks path of spray application

Turf Mark, a blue color spray indicator, shows where spray is applied. The temporary colorant is a formulated concentrate that mixes easily with pesticides and fertilizers or other plant growth-regulating chemicals. Amount of colorant concentrate can be varied for more or less color intensity.

The colorant helps eliminate spray overlap, over-application, skips and drift. It can be used in spot spraying or broadcast application. The colorant comes in poly bottles with self-calibrating spouts, in one quart or one gallon sizes.

USCO Landscapes project, Richmond, VA—SEED SHIELD was tested by a professional landscaper against straw in covering grass seed. Both areas were identically prepared, seeded and subjected to the same growing conditions including a 6 week drought. But then, after 1 week of identical watering, the SEED SHIELD covered side (left) showed dramatic germination results compared to the straw covered side (right).

"SEED SHIELD cuts germination time in half."

"I was skeptical about using SEED SHIELD at first," admits Betty Staples, a professional Richmond, VA landscaper. "But after using it on several commercial and residential projects since September, I am sold on it.

"On the average, using SEED SHIELD along with proper soil preparation and watering, I’ve been getting over 90% germination in 4-5 days for fescue. With a straw covering, it generally takes twice as long to get just 60% germination and considerably longer to get full germination. "SEED SHIELD seems to hold just the right amounts of heat and moisture. I was able to get excellent fescue germination in October and November despite extreme weather conditions including drought and drastic temperature changes. Plus only one daily watering was needed instead of the usual 3 required with straw.

"It also solved a number of other landscaping problems. I got fewer bare spots. SEED SHIELD virtually eliminated debris from the new grass. It cut down on wash caused by rain. And it kept the birds from eating the seeds.

"I’ve recommended it to homeowners and other landscapers as being very cost-effective in the long run for producing faster, healthier sod quality growth. Plus it can let you seed earlier and later in the season than straw."

For faster, fuller grass and profit development, talk to A.C.F., Inc. about the unique, new SEED SHIELD fabric.

**Water absorber handles 4,000 gal./hr.**

The Super Sopper has been used in Australia for more than eight years. It is now available in the United States. The Sopper, available in four sizes, can handle as much as 4,000 gallons per hour (the Whale) for heavy duty jobs such as fairways or outfields, down to smaller jobs such as greens or tennis courts.

The Sopper works on grass, sand, concrete, asphalt and other surfaces, absorbing one inch of water on each pass. Conversely, it can also be used to wet a surface after an event to help repair damage.

**Wheel loader performs with power, durability**

The Coyote C8 fully articulated loader goes where skid loaders go, handling buckets from 0.75 cubic yards to 1.25 cubic yards through means of a Z-bar linkage with one double-acting lift and one double-acting bucket cylinder.

It is powered by a Duetz four-cycle, two-cylinder air-cooled diesel engine generating 38 hp. Four-wheel drive can be activated by the operator from the cab. The loaders feature a three-year/3,000-hour full drive train warranty.

Denser, darker green Manhattan II takes the bruises for your athlete

What goes up must come down... and that goes double for athletes' knees and elbows.

Improved Manhattan II perennial ryegrass has a built-in cushion developed through genetic improvement. The greater tiller density of Manhattan II takes the punishment athletes dish out, then springs back to retain its great-looking appearance. All that toughness... with improved mow-ability to boot!

Manhattan II also provides a darker green color than the old standard Manhattan; improved disease resistance, drought and shade tolerance as well as fertilizer savings.

Manhattan II was developed to save on maintenance costs... but the real saving is on knees and elbows!

"Fall on the leader"

Manhattan II
