For more than 30 years, Penncross remains the most specified putting green grass ... of any species.

Talk about tried and true! Penncross creeping bentgrass has established a track record that stands to this very day. Steady performance through heat, drought, snow, storms and floods have established Penncross as the premium putting green surface for the most demanding players and superintendents.

This reputation can only be earned through years of dependable service... and most importantly... consistent putts!

A putting green is no place to putter around with an unknown bentgrass. Go with what you know... and you know Penncross from its years on top of the leaderboard.

Penn State University authorizes Penncross seed to be grown only from stolons and sold only as certified seed. Seed produced from Penncross seed cannot be labeled Penncross.

Raise your trimming production to new heights with the triplex package that outperforms them all.

Now you can raise your trimming production to a new all-time high with the superior efficiencies and cutting performance of the all new Tri-King 1471.

Faster, more precise control. Our exclusive foot-operated hydraulic lift with automatic reel shut off combined with aircraft-yoke-type steering delivers the fastest lift, turn and mow capability of any triplex in the industry. For greater overall production.

Plus, it tackles your most demanding trimming jobs, thanks to the hill-hugging ability of this 71” hydrostatic traction drive mower.

Unequaled cutting performance. Match cutting frequency precisely to mowing conditions with variable speed control and a choice of 5- or 10-blade reels. And fixed or free-floating heads glide closely over land contours for that one-of-a-kind Jacobsen cut.

Designed to trim operating costs, too. The 1471’s low-maintenance design includes a reliable 14-hp cast-iron Kohler Magnum engine with electronic ignition, and a ducted clean air system for extended operating life. Unlike competitive systems, its direct-drive traction pump eliminates annoying belt slippage and time-consuming adjustments and replacements. And interchangeable reel drive belts make replacement easy, without troublesome jackshaft removal.

So, arrange a free demonstration with your Jacobsen distributor, today. And see for yourself how superior efficiencies and performance enable the 1471 to take the high ground in trimming production.

Attractive lease and finance plans available. Jacobsen Division of Textron Inc., Racine, WI 53403.

Every time a golfer steps onto a green, it's inspection day. You don't want to be put on the spot, use Banner® preventively before there's a problem.

Because Banner stops disease before it starts. And Banner provides the longest lasting control of dollar spot and brown patch available. Banner works systemically to control disease from the inside out. Once absorbed by the leaf and root system, Banner won't wash off, and keeps on working after drying, unaffected by rain or irrigation.

One 2 oz. spraying of Banner lasts 14 to 21 days on brown patch, and provides up to 28 days of excellent control on dollar spot at a 1 oz. rate. Nothing lasts longer. Banner also provides excellent systemic control of powdery mildew, rust, anthracnose, red thread and stripe smut.
Banner's low rate (1 to 2 oz. per 1000 square feet) and long application interval mean lower cost per day of control. Less chemical, low rates and long residual also mean lower cost per day of control. Less square feet (and long application interval) Banner's low rate (1 to 2 oz. per 1000 square feet) makes it the preferred treatment where environmental considerations are important. Banner's easy-to-use, no waste, liquid formulation is safe to turf grass and applicators. Banner is simply the best protection there is. And you'll know it on inspection day.

Preventive control is longer lasting, and you'll know it preventing you from spot spraying.

Longer Lasting, And You'll Know It Preventive Control.
22 COVER STORY: JACK'S BABY
Muirfield Village Golf Club is the home of the Memorial every year, and, in 1987, the Ryder Cup. It is a well-maintained course—some say the best in the country. It has to be. It's the course that Jack built.

28 A GOOD ROOT FEEDING
Yes, the green industry remains strong as 1987 ends. But a good diet of education all around is needed to keep it healthy.

32 LEGISLATION vs. LANDSCAPES

36 A CAPITAL IDEA

42 TURF CALENDAR
A detailed listing of January's green industry events.

46 SOURCES OF CAPITAL
Over-extended in your loans from conventional sources of capital? You may want to try secondary sources—but not without first understanding the criteria for borrowing.
Think Of Us As Turf Insurance.

We pack peace of mind into every pound of Par Ex®. And we call it IBDU®. It's pure nitrogen and it's 100% available to your turf in the space of a single growing season.

You're in charge.

Ordinary slow release nitrogens are temperature activated. They depend on bacterial activity or coating thickness or other factors which are out of your control. When activated by hydrolysis, nitrogen from IBDU becomes available to your turf. Normal soil moisture is all you need; excessive moisture will not adversely affect IBDU's performance.

Nitrogen efficiency — the IBDU key to quality turf.

A nitrogen source is efficient if most of the applied N is absorbed by the plant and not lost in the environment by leaching past the root system, volatilization, or other factors. Studies have shown that IBDU trickles slowly past the root system, increasing total N uptake over time, resulting in better nutrient efficiency and less nitrate pollution of ground water when compared to soluble N sources.

Late season fertilization — the IBDU advantage.

Studies have shown IBDU to be a superior slow-release nitrogen source for producing excellent turf in the spring, after application the previous fall on cool season grasses. IBDU is also superior on over-seeded Bermudagrass in southern areas.

Sure, you can buy cheaper fertilizer. But run into a turf problem or two, then check your costs. There's a good chance they'll be rising as fast as your blood pressure. So why take the risk when, for a few pennies more, you can take control with IBDU.

PAR EX® and IBDU® are registered trademarks of Vigoro Industries, Inc., P.O. Box 512, Winter Haven, FL 33881-813/294-2567.
Economy still faltering

Although the United States economy is experiencing one of the longest economic expansions in its history, indications are that the economy may not be quite as strong as it appears.

At least, that's what Lawrence Chimerine, Ph.D., told the attendees of the International Lawn, Garden & Power Equipment Expo earlier this year.

Chimerine, chairman and chief executive officer of Wharton Econometrics, explained that the current economic expansion is characterized by relatively slow growth, a severely depressed starting point and uneven economic performance. Consumer spending is starting to flatten out after several years of strong growth, he said. However, while a new boom is not emerging, he said, it does not seem likely that the economy will start sliding into another recession. A pattern of relatively flat or slow growth will remain in place for the next several years or even longer, he predicted.

Chimerine's outlook for lawn, garden and outdoor power equipment sales next year is for declines of three to five percent. One bright spot he sees is that consumer spending for remodeling is beginning to show signs of significant strength.

Green industry called 'burgeoning'

What the National University Continuing Education Association calls the "garden industry" is "burgeoning." According to an article by George Faux in the NUCEA magazine, "landscaping and gardening ventures are among the fastest-growing businesses in high-construction areas."

Faux goes on to write:

"The landscaping and gardening markets have blossomed into multi-million-dollar industries. No longer the college kid down the block, today’s typical landscaper is a well-trained and well-paid professional; a small firm of seven men can earn upwards of $200,000 a year. The high cost of plants and shrubbery, together with an emerging aesthetic appreciation for the great outdoors, has moved consumers to seek such professional landscapers and horticulturists for their home beautification projects."

The article pointed out the many continuing education programs that provide courses to better prepare landscapers and horticulturists for today’s competitive market.

For more information, contact the NUCEA at One Dupont Circle, Suite 420, Washington, DC 20036; (202) 659-3130.
One great discovery deserves another.

We call ours the Kubota F2000 front mower.

The first front mower with 4-wheel drive, it makes fast work of those nooks, crannies, curbs and slopes you can't landscape into submission.

Add front wheel differential lock, a 20-horsepower diesel engine, and travel speeds up to 9.5 mph, and it flies in the face of rain, snow and mud. With Kubota-like ease.

It has a hydrostatic transmission to spare you the trouble of clutching. Rear-wheel power steering and independent front brakes for precision maneuverability. And your choice of 60" or 72" mowers, a sweeper or snowblower. All lifted hydraulically.

Next time your turf throws you a curve, let our F2000 straighten it out.

Send for our free Grounds Maintenance Equipment Guide by writing to Kubota Tractor Corp., P.O. Box 7020-A, Compton, California 90224-7020.
Tips for lighting up Christmas landscapes

Christmas lights can add color and holiday spirit to the landscape—if they’re done right. Frank LaGuisa, senior specialist of decorative lighting for General Electric, has designed the National Christmas Tree display for 12 years. He says landscapers should follow these steps in preparing a Christmas display:

- **Determine the objective**: the message to be expressed, viewing angles, sight lines of viewers, natural features, architectural features and structures. Analyze the site, using natural attributes. Find the best location for decorations and features to be highlighted.

- **Select a theme appropriate to the desired image**, such as traditional, modern or religious. Take into consideration local customs, traditions, characteristic decor, ethnic traits and religious customs.

- **Translate the theme into a unified composition**. Establish a focal point and color scheme to maximize effect. Set a unifying format, but play variations against the theme: color, proportions, sizes or treatments. Do not vary everything.

- **Establish the type of construction**. Determine where devices will be mounted; how they can be reached with the electrical power supply. Consider weight and size limitations. Check out visual conflict with lighted windows, street lights and identification signs. Use skills within your organization and familiar construction methods.

- **Choose lighting equipment**. Select fixtures and lamps with the appropriate wattage, size, type, and color. Plan for the quantity of lamps necessary to provide the planned pattern and brightness.

To figure exactly how many lights are needed, LaGuisa suggests this formula: for the number of string set lights needed to give a tree a “full” effect, multiply the height of the tree by the width of the tree (in feet) by three. Trees larger than 50 feet may require medium-base lamps, while trees less than 10 feet can use “midget” lamps. When using plug-based midget lamps, modify the formula by multiplying by six or eight, rather than three.

Create color impact by using solid or limited color combinations. Ironically, the more multi-colored lights on one display, the less vivid is the perceived color. Multi-colored sets with equal numbers of gold, red, green and blue lamps will produce a yellowish-white light, since the primary colors produce white light.

The color impact hierarchy is: gold lamps are the brightest, followed by red, then green, while blue has about one-fifth the visual impact of white lights. For best results, use brighter colors on focal points or foreground elements, and dimmer colors on background elements.

Outlining structures is a simple and effective way to decorate for the holidays. Add liveliness to the display by installing a twinkle lamp in every sixth socket. Heavier use of twinkle lamps will produce a busy effect.

For colorful examples of Christmas lighting, see "On Design."

Norway spruce and Eastern red oaks “dressed up” for Christmas

A portion of Highway 90-A’s median

Government, business cooperate on highway

The largest matching fund program in Texas’ highway beautification program has been announced by Lexington Development Company. The unique partnership of state government and private business has produced a 500-foot wide, 2 1/2-mile long belt of blazing color.

The $500,000 project lies along Highway 90-A between Sugar Land and Richmond, southwest of Houston. It fronts Lexington Development’s 3,100-acre master planned community, New Territory, which will contain 8,500 homes, office, commercial and retail buildings. The program includes a mix of wildflowers, grasses, shrubbery and trees planted along the median and both sides of the property.
