David Kroll, CGCS, inspects one of 18 PennLinks greens at Wilmington CC, Delaware

**PennLinks creeping bentgrass — working wonders at Wilmington**

New bentgrass variety provides a truer putting surface at Wilmington CC.

When David Kroll, CGCS, was dealt the problem of bentgrass deterioration on the greens of this prestigious country club, he called in the experts to help. The greens could not be salvaged, so they were treated with methyl bromide and completely re-greened.

Dr. Joe Duich, Penn State University, suggested seeding with a bentgrass coded PSU 126.

Two and a half years later, the greens look great and with PennLinks' more upright growth pattern, putt like a dream. That experimental variety is now named PENNLINKS, and is available in limited quantities.

Available in limited supply this fall in the re-usable 6 gallon "PENN PAIL."

PennLinks' Oregon certified blue tags qualify for cash awards to qualifying turf organizations for turf research. Call our toll-free number for details.

Circle No. 159 on Reader Inquiry Card
COVER STORY: WHERE WERE YOU IN '62?
Weeds Trees & Turf turns 25 this year. To celebrate the quarter-century mark, we take a look back and look toward the next 25 years in the turf industry. This month, the subject is chemicals.

'NEED A DRINK'
Many golf course superintendents could be uttering that phrase in the not-too-distant future. But it's not water they'll be drinking.

THE COMEBACK
35 Making a Living
44 Slow Release, Fast Relief
48 Bentgrass Showcase

LAWN AND LANDSCAPE FERTILIZATION
Fertilizers have a definite impact on root growth, carbohydrate reserves and stress tolerance. The dedicated turf manager closely monitors his fertilizer application timing, rate and method.

ENDOPHYTES: AN UPDATE
In 1983, Weeds Trees & Turf first reported on insect-resistant turf containing endophytes. Today, researchers are discovering more about the fungus.

With A
Ninety-six percent of the professionals, commercial users and homeowners we talked to told us they love the way their Gravelys perform. Go to a Gravely dealer to test a riding tractor, two-wheel tractor or our Pro Series today. And fall in love with a Gravely.
A new hazard to avoid on the links

Real estate and golf course developers are giving new meaning to the phrase: “playing in your own back yard.” It is becoming increasingly common to see private golf courses being designed around housing communities, stirring changes in both the way we play and the way we live.

National Golf Foundation figures show that in 1985, 39 percent of the nation’s 13,000 golf courses were private, but this is changing. “Golf courses can convert marginal land into prime land.” John Rooney, a professor at Oklahoma State University, said in a Wall Street Journal article.

Gerald Barton, CEO of Landmark Land Co., a leading developer of golf communities, echoes the sentiments of many would-be homeowners. “I’ve never hit a golf ball, and I don’t know anything about the game,” he says, “But I’d like to live on a golf course.”

Golf legend Jack Nicklaus has also gotten in on the act. A 3½-year partnership with Tampa businessman J. Robert Sierra has led to a number of these communities, including six presently in the works. All include high-priced private housing built around a Nicklaus-designed course.

Work began on one of these projects, the Country Club of the South near Atlanta, last year. The 800-acre, 600-family community, built around a 200-acre golf course, will be walled or fenced, with 24-hour security.

Although the golf course is expected to be the loss leader, profits from the land sale will more than make up for it. The total project cost is estimated at $45 million, with projected property sales of $78 million. Of the 200 lots in the first-lot phase, 165 have sold. Sierra expects the project to take eight years to sell out.

The natives are restless and growing

Native wildflower gardens are sprouting up around homes across the country. Homeowners are taking advantage of a wide range of American wildflower and shrub species with texture, color, size and shape to match anything from around the world. “Until recently, nurseries, and garden centers didn’t carry many native species; and to landscape architects, using native species was a novel idea,” says Leo Collins of the Tennessee Valley Authority (TVA).

This new American revolution is still in its infancy, though. About 80 percent of all nursery and garden material available in the TVA area is still exotic. But, Collins says, wholesalers and retailers are beginning to adjust to consumer changes.
Count on ISC Controllers

Rain Bird's ISC Controllers allow water distribution to be programmed to exact specifications—conserving water and saving money, too.

Newly introduced 4-, 8-, and 12-station microcomputer controllers join existing 16-, 24-, and 32-station models to make the ISC family the most comprehensive line of water management tools available today.

The ISC Controllers offer features of proven value to landscape architects and irrigation designers. Water budgeting permits watering times to be changed in 25% increments for all stations at the touch of a single key. Each station features a separate, totally independent program—-independent operating days, starting time and running time. And preprogramming allows the program to be set in the office and installed in the field up to 24 hours later.

Independent Station Controllers—performance you can count on without compromising system design.

LAWN CARE

Is new protective clothing on the horizon?

Personnel from Dow Chemical Co. will be investigating the possibility of a new protective leg sleeve for liquid pesticide applicators, according to Dow's Dr. Jim Vaccaro.

"The lawn care industry has the greatest exposure to chlorpyrifos (Dursban) than any other industry, mainly on the lower leg," Vaccaro told LCOs who attended the Professional Lawn Care conference in Baltimore. "But a sleeve can be constructed to limit LCOs to practically no exposure. We are going to a clothing manufacturer to see what the possibility is of getting this type of protective clothing made. Then we're coming to the lawn care industry."

Vaccaro said that pants serve as protection. But, he warned, "when they become saturated, they act like a cuff and actually push the material through the skin."

According to Dow research conducted by Dr. Vaccaro and his associates, the average lawn care applicator is exposed to 241 milligrams of material per working day, including about 135 milligrams on the skin. Hand/wrist deposits account for 44.9 percent of the exposure and lower leg deposits account for 42.4 percent.

However, urinary biomonitoring tests reveal that only two milligrams is absorbed into the body, nearly all of which quickly passes through the human waste system.

The Threshold Limit Value (TLV) for human exposure to chlorpyrifos is 2,400 milligrams per working day. That is the highest amount of chlorpyrifos a person could be exposed to every working day for a working lifetime without having any adverse effects.

In another development at the PLCAA show, 35 percent of the LCOs responding to a Lawn Care Industry magazine survey say that they will copy ChemLawn this season and post signs after applying pesticides to residential lawns.

ChemLawn, the nation's largest lawn care company, said late last year that it would post every home it treats this summer, in the face of continued negative publicity about lawn care services.

The survey also revealed that 28 percent of the LCOs responding to the written questionnaire believe phenoxy herbicide use would decrease in 1987, though 55 thought it would remain the same. The remainder (17 percent) think it will increase.

Overhead valve new for Briggs & Stratton

Briggs & Stratton will unveil its first overhead valve (OHV) engine, the first in its class, this month at the Phoenix Golf Course Superintendents trade show.

The 12½ hp vertical shaft engine was designed specifically to supply the commercial turf equipment and premium consumer tractor and riding equipment markets, niches that have lacked engine options.

"This new OHV is a result of feedback we got from customers, end product users as well as our original equipment manufacturers," says Douglas W. Anderson, Briggs & Stratton vice president of sales.

The result is that the new engine delivers more power than other engines rated in this power range. "What we are especially pleased with," says Anderson, "are the winning features that our customers told us they wanted—a powerful engine in a compact configuration, quiet, with good sound quality, and just about vibration-free."

The Briggs & Stratton engine design includes full pressure oil lubrication, a system which can also allow extension of maintenance intervals, and fuel and oil efficiency.

"A major key to this engine, and others planned for the entire line," explains Patrick Reardon, Briggs & Stratton marketing manager, "is in the torque rise. This engine responds to meet varied cutting conditions without stalling or backing down."

The new engine provides a tapped hole that could be attached to an oil pressure switch, two-quart oil capacity and an optional spin-on oil filter. All user-serviceable parts are accessible from the top to make regular maintenance convenient. A grass-ejecting intake screen prevents the plugging of air cooling passages. The engine's governed idle feature allows blade engagement at idle speeds.

Cooler carburetor temperatures are assured by the ducted intake; the low mounting of the carburetor allows for the use of a larger gravity-fed fuel tank and helps prevent vapor lock.

The engine has an optional fuel pump and can be equipped with either single cable control or separate choke and throttle controls.

The engine, now in field testing and evaluation, will be available on equipment in late 1987.
Artificial surfaces developed as possible alternatives to sand

At least two types of artificial surfaces are available in the golf industry as alternatives to sand greens.

One, Mod Sod, is being used at Oakwood Country Club in Cleveland, Ohio. The other, OmniGreen, is getting good results at Tennis Courts of New Hampshire in Tilton, N.H.

"These (artificial surfaces) are much better than you think," says Rich Labarre, operations manager at Tennis Courts of New Hampshire. "We've installed a dozen or more with complete satisfaction."

George Bigham, club pro at Oakwood, says that Mod Sod greens can be designed for any speed. The practice green at Oakwood stumps at nine. "It's best in high-volume situations when maintaining greens is cost-prohibitive," he notes.

Besides use as a golf green, these artificial surfaces can be used indoors in pro shops, for golf car paths or for driving range tees.

Mod Sod was invented by professional golfer Fred Haas. It consists of 13/4-inch polypropylene fiber filled with sand. The sand, usually dyed green, is then highly compacted to provide whatever speed is desired. The fiber is UV-stabilized and comes with a five-year guarantee.

Mod Sod's base is a patented combination of sand, cork, rubber and other ingredients. Kevin Hyland of Hyland Landscaping in South Euclid, Ohio, says the combination prevents compaction, which is prevalent in sand-only bases.

Mod Sod is sold in the United States by Bigham and Hyland. For more information, call Bigham at (216) 291-0679 or Hyland at (216) 382-4438.

OmniGreen, which is featured at Wee Links Golf Course at Walt Disney World, comes in three sizes and two shapes. It is sold as "a beautiful addition to your backyard." The product is made of a patented Omnifiber surface with a specially formulated sand dressing and is endorsed by the PGA Tour.

OmniGreen is manufactured by Sportec International. For more information, dial (800) 835-0033.

HERBICIDES

Harvard disputes Kansas 2,4-D study

Noted American philosopher and former professional baseball player Yogi Berra once said: "It ain't over 'til it's over." This statement seems to apply well to the 2,4-D controversy.

A recent report in Agrichemical Briefing newsletter states that one of four EPA-commissioned studies, this one done by Harvard epidemiologist Brian MacMahon, disputes the conclusions reported in the original Kansas/National Cancer Institute study, which linked the herbicide to cancer. The other three studies have given conflicting results.

"We've got to go beyond the idea that we can wow people with statistics as to how safe chemicals are," Kaufmann told the Missouri Lawn and Turf Conference. "All chemicals are toxic. The degree of injury is related to the amount to exposure. All chemicals can be used safely if the exposure is controlled to prevent toxic effects."

Kaufmann says first the applicator needs to be aware of how exposure happens.

Applicator exposure occurs in two ways:
1. Handling and mixing;
2. Application.

Environmental exposure also occurs in two ways:
1. On-site targeting through
   • foliar absorption;
   • thatch absorption;
   • soil absorption.

2. Off-site movement through
   • vaporization;
   • soil penetration;
   • runoff.

Kaufmann gives these helpful hints for avoiding exposure problems:
1. Always read the label.
2. Observe all precautions.
3. Apply the chemical according to label directions.
4. Know the product's benefits and safety features.
5. Share this information with your customers or golf course members.

Kaufmann quotes Bruce Ames, of the University of California at Berkeley, who says that "more than 99 percent of the carcinogens are from naturally occurring substances. Less than one percent are man-made."

"1-2-3," a column describing pesticide safety "by the numbers," is a regular feature of WT&T.
OWN A MOTOROLA 2-WAY RADIO FOR AS LITTLE AS $12.08 A MONTH* DURING MOTOROLA'S NEW YEAR CELEBRATION

WIN A FREE CAR TELEPHONE...

It's Motorola's New Year Celebration... and we're inviting you to help us celebrate with great low prices. Great financing. And a great chance to win a free car telephone!

You can own one of our most popular 2-way mobile radios... the compact, 2-channel capable MAXAR 50 radio that mounts almost anywhere—for as little as $12.08 a month*... just $325. Or, our most popular portable, the HT-90 radio, can be yours for as low as $17.43 a month*... only $460.

And that's just two of the values we have in store for you! We'll help you choose from our large selection of rugged, dependable mobiles and portables. Then we'll have your custom built, high quality 2-way radio delivered fast... in as little as 8 working days on selected models!

But there's more! We want everyone to participate in this exciting Motorola New Year Celebration. So—when you call us toll-free or return the attached reply card, we'll automatically enter your name in our MOTOROLA CAR TELEPHONE DRAWING... without obligation. You could be one of ten winners of a new car telephone... worth up to $2,600!

Now's the time to go for it! Call Motorola toll-free 1-800-247-2346 today or return the postage-paid card. Don't let this New Year Celebration of great values pass you by!

*Pricing based on following HT-90 (VHF), Maxar 50 (VHF), low power, single channel models Maxar 50 featured with carrier squelch HT-90 featured with Private Line squelch. Payments based on 36-month Motorola Financing terms (available to qualified applicants) with no down payment Price do not include communication service costs, such as community repeater fees. Prices vary based on features and options selected. Appropriate FCC license is required. © Motorola 1987

CALL MOTOROLA TOLL-FREE
1-800-247-2346
OR MAIL THE CARD TODAY!

Entries must be received by March 16, 1987.
WIN A FREE CAR TELEPHONE
during Motorola's New Year Celebration valued up to $2,600

To enter call toll-free or mail the reply card.

WIN A CAR TELEPHONE
Get a free Motorola cap as our thanks for talking with your Motorola representative!

☐ YES! I want to join in on Motorola's New Year Celebration! Please have a Motorola Radio Sales Representative call me to discuss how Motorola 2-way radios can save me time and money...and to get my FREE Motorola cap as my thank-you gift! And don't forget to enter my name in the Motorola Car Telephone drawing...without cost or obligation.

☐ NO, I don't have time to talk to a Motorola Representative. But please enter my name in the drawing without obligation. I understand I will not receive a FREE Motorola cap.

CALL TOLL-FREE TODAY 1-800-247-2346, Ext. 771
or mail this card.

Motorola reserves the right to choose the specific car telephone to conform with local availability & system coverage.
CAR TELEPHONE DRAWING RULES

1. No purchase necessary.
2. To enter, call our toll-free number or print your name and address on this business reply card. No facsimiles eligible. One entry allowed per business.
3. Within the state of Washington and Virginia, facsimiles are eligible.
4. Mail all entries to: Motorola Communications & Electronics, Inc.
   Attention: B. Bennett
   1301 E. Algonquin Road
   Schaumburg, IL 60196
6. All prizes, worth up to approximately $26,000, will be awarded. Free installation included.
7. For a complete list of the official rules and/or winners list, send a self-addressed, stamped envelope to:
   Motorola Communications & Electronics, Inc.
   P.O. Box 2370
   Libertyville, IL 60198
8. Sweepstakes void where prohibited.
