Besides traffic problems, the walkway between Brynwood's 14th and 15th holes suffered from bad drainage.

ARCHITECTS AS PROBLEM-SOLVERS

Brynwood Country Club needed a solution. Where did they go? To a local landscape architect. Today, club members are glad they did.

By the summer of 1986, the terms "muddy and unattractive" were the best anyone could apply to the route between Brynwood Country Club's 14th green and 15th tee. There was no defined cart path—just a mess where golfers had trekked.

The area also had drainage problems after rainfalls, which eventually led to a rutted path on this Milwaukee-area golf course. That's when Lied Buettner & Associates was called in.

"We realized we had to do something," remembers Steve Blendell, course superintendent, "and we knew we wanted to do it right. That is, in the most attractive way possible."

The in-house crew decided not to tackle the project itself. "The job was just a bit more complex than it initially seemed," Blendell says. "We were looking at an overall distance of approximately 500 feet between the periphery of the green and the next hole."

"We felt this wasn't just a matter of planting a couple of shrubs. We envisioned changes in the terrain and integration of different types of landscaping ideas and knew the different grades would also present a problem," he remembers.

Additionally, Blendell points out, drainage problems would need tile work and grading problems required retaining walls.

Although the Brynwood staff's decision to seek outside help wasn't made lightly, there was yet another important factor to consider. The timing was extremely tight. Following their request for assistance from Lied Buettner in late October 1986, only a little more than a month remained in which to develop a plan and prepare a budget for the club's capital improve-
PROXOL®

When Surface Pests are at their worst, PROXOL® works best

Surface-feeding sod webworms, armyworms and cutworms don't stand a chance when PROXOL® 80SP is on the job. It's as easy to apply as a spray and has no unpleasant odor.

Fast-working PROXOL readily penetrates thatch to control grubs. Yet it has no long-term residual build-up in the soil.

For a complete information kit on nourishing and protecting your turf, including a comprehensive guide on turf insect control, join the NOR-AM Turf Management Program. Write to the Communications Department, NOR-AM Chemical Company, 3509 Silverside Road, P.O. Box 7495, Wilmington, DE 19803.

IMPORTANT: Please remember always to read and follow carefully all label directions when applying any chemical.
The landscape plan used logs and boulders to prevent carts from wandering onto other parts of the course.

**Enter Buettner**

Blendell, who was familiar with the work and reputation of Dennis Buettner, called in the principal planner and landscape architect for Lied Buettner & Associates Land Planning of nearby Sussex, Wis.

Why a landscape architect or even a land planner for a project like this?

"A landscape architect frequently gets involved when a presentation must be made to an approval body," Buettner explains. "Implementation can usually be accomplished by the grounds staff, but the professionally-developed landscape plan provides the budgetary rationale required to get the project approved in the first place."

Buettner says using an outside consultant often helps diffuse internal politics and enhances the acceptability of a project when a committee has to justify expenditures to the membership. These recommendations to the budget committee are also backed by the reputation and experience of the professional landscape architect, who may even serve as a mediator of sorts. When called on, he or she can act as a facilitator between different points of view on budget committees or boards of directors.

Blendell, Buettner and Brynwood general manager Norman Eckstaedt made the initial presentation. The landscape committee in turn presented it to the capital budget committee. Both groups approved the plan.

**The solution**

Buettner’s recommendations began with drawings showing a curvi-linear paved cart path, the use of which would be reinforced by berms and plantings designed to keep carts on the path and prevent shortcuts.

"What we wanted to do," Buettner says, "was to create an attractive ‘obstacle course,’ so to speak. We intended to channel golfers along the path through the use of landscaping."

The landscape plan (see diagram) used logs and boulders to prevent carts from wandering onto other parts of the course. Where the path curved in two points, small hills or berms would contain golfers and prevent shortcuts from those points.

"Lied Buettner succeeded very well in focusing attention on the different landscape techniques we used," Blendell says. "Especially considering the length involved, we wanted the cart path to be a pleasant experience that would keep people's interests and entertain them rather than just being a straight walk from one green to the next tee."

"There's no doubt that this project also added to the overall beauty of the course," he adds.

In addition, Lied Buettner’s plan provided for widening the cart path at the men’s 15th tee and suggested re-location of the water cooler station there to make it more accessible to golfers.

**Who does what?**

While Lied’s did a lot of the actual work once the ground was workable, the Brynwood staff also did part of it.

"Prior to taking this to the landscaping committee, we had already discussed with Dennis just what portions of the project Lied Buettner would handle and what could be done by our staff," Blendell explains. "We knew before we made the budget portion of our presentation approximately who would handle what."

The entire project, including Lied Buettner’s planning fees, was in the neighborhood of $20,000, Blendell reports. That encompassed everything from asphalt and heavy equipment costs to the cost of tall landscaping materials and their planting.

Both Buettner and Blendell were pleased to find there were no major problems implementing the design, other than what Blendell calls the "usual weather problems—either it's too hot or too cold, too wet or too dry."

If anything, he recalled, what required the most effort was the need to carefully coordinate the work of the asphalt crew, the wall and drainage people, and those doing the planting work.

"Overall," Blendell says now, "I’d have to say we were generally very pleased with the project. What’s most important to us is what our members’ think and their reactions were very favorable.

"The feedback we got was that the new path was not only thoughtful and well-conceived, but equally well executed."
Turn more production and return more profit to your landscaping business with a Bobcat 700 series skid-steer loader.

Designed with engineering excellence to turn in its own tracks for time-saving maneuverability. And featuring an impressive array of changeable attachments to handle almost any job.

The full Bobcat line features 15 model sizes, ranging from 600 lbs. up to 4,000 lbs. lift capacity to handle almost any size load.

Bobcat also offers value. A Bobcat is well-built, and backed by a dealer service and parts network second to none. No matter where you put your Bobcat to work, there's a Bobcat dealer nearby with genuine Bobcat parts and service by factory-trained mechanics. In fact, Bobcats are so well-built and maintained that they keep their value at trade-in time, which gives you a big return on your initial investment.

Turn into your nearest Bobcat dealer today, and take a turn for the best in performance and value.
"Now is not the time to go it alone."

"If you're like so many other lawn care companies, you have more than crabgrass to contend with. Sure, your sales are up—but so are your problems. Cash flow worries. The need for more employee training. The threat of growing regulation. The exploding costs of insurance and health benefits. These are only a few of the realities of running a lawn care business in the '80s.

That's where the Professional Lawn Care Association of America can help. PLCAA is the ProSource for over 1,000 businesses, large and small. PLCAA provides the benefits and resources you need regardless of the size of your company. Find out for yourself what so many other lawn care businesses have discovered, that PLCAA membership doesn't cost—it pays!"

JAMES R. BROOKS
Executive Vice President, Professional Lawn Care Association of America

Check the PLCAA benefits...

☐ Management Monograph Publications—Booklets that cover critical business subjects like getting a loan, developing a marketing plan, hiring and firing practices, and more.
☐ Group insurance and health care—PLCAA offers health and life insurance plans for companies with as few as two employees—and at attractive group rates.
☐ Collection services—A results-producing collection service to help members with slow-paying accounts.
☐ Audio-visual training programs—Comprehensive, inexpensive video and slide programs for in-house training of your employees. Current subjects include insect and weed identification, turf diseases, and pesticide handling, with additional topics under development.
☐ Regional seminars—Each year PLCAA brings the latest in management and technical training, plus equipment demonstrations, direct to a location near you.
☐ Annual Conference and Show—Exhibits, educational sessions, workshops, and an outdoor equipment demonstration are just a few features of PLCAA's popular annual gathering of lawn care professionals.
☐ Exclusive publications—Stay current with Turf Talks, PLCAA's bi-monthly newsletter. Members also keep in touch with tax, labor, financial and regulatory information through our periodicals, the Legal Update and Environmental Update bulletins.

And that's only part of the advantages PLCAA members enjoy. If you want to know more, just drop the coupon below in the mail, or give us a call at toll-free 1-800-458-3466.

Overseeding?
put the seed where it belongs...
in the soil,
for perfect germination.

MODEL LOS24 OVERSEEDER
The Brouwer™ overseeder is a self propelled unit that is perfect for professional landscapers and lawncare businesses.
A proven Honda engine drives through a heavy duty chain and gear drive to give excellent traction. The unique 22 inch wide seeding system ensures better germination with minimum seed loss.
Available with easily fitted optional fertilizer hopper. Check below for more outstanding features.
- Powered blades cut adjustable depth grooves
  2 1/2 in. apart.
- Calibrated seed flow through stainless steel slides.
- Proven, reliable 5 hp. engine.
- Offset discs to cover the seed.
- Fold-away operator handle for easy transport/storage.

Also available as Model LS24 seeder
The overseeding attachment is quickly and easily replaced by a trailing heavy-duty open mesh steel roller that covers the seed and firms down the soil.

Researchers agree on some curative methods for black layer on golf course greens, but they still don't seem to agree on all of the causes.

urf researchers now agree that black layer on golf course greens can be dealt with.

Not long ago, it was thought the superintendent had to replace the green once the condition occurred. While this remains a viable—though expensive—option, principle researchers of the condition find that cultural practices can alleviate it.

Number one
Aeration is number one on the list. “I’m talking slicers, spikers—anything to break up the surfaces,” notes John Hall III, Ph.D. at Virginia Tech University.

The condition apparently arises from a number of causes, but commonly from lack of oxygen combined with excess moisture. “The concern is that we have oxygen in the soil so it can breathe,” Hall says.

Compaction, or layering related to the condition, is cured through coring. Regular aerators help, but deep aeration may be necessary to get through the layering. Judicious use of irrigation and fertilization also helps alleviate the effects.

Opinions vary on the causes, however. Here is what some researchers say:

Hall: “The pressure on (superintendents) has increased in recent years because of traffic on your courses. There were 25,000 to 30,000 rounds played per course in 1960; there were 65,000 to 70,000 per course in 1987. We have moved toward sandier media to reduce the amount of stress due to increased traffic.”

Hall has found these contributors to the condition: sulfur; blue-green algae; salinity greater than 10; podsolization (the maturing of intensely-managed soils through leaching of iron, aluminum and silicate compounds); silt and clay stratification; low phosphorous; high metal concentrations; and “chromatographic irrigation.” He believes black layer is not a common problem.

Clint Hodges, Ph.D., Iowa State University: “You don’t have to have an anaerobic condition for the layer to start. But there is some component produced by the algae that you have to have. It can start in aerobic conditions. We are...
IN LANDSCAPING AND HORTICULTURE
WHOEVER OWNS THE MOST MAKES THE MOST.
RIGHT?

WRONG.

Use, not ownership, creates profit. You don’t need to be an accountant to know that owning assets does not create profit...using them may.

In fact, your accountant might tell you that leasing may be the most cost-efficient financing source available today. So if you’re interested in a financing alternative that may provide you with tax advantages and that may improve your cash flow, consider these additional benefits of Agri-Lease® by Telmark®:

- No down payment—Enjoy most of the advantages of ownership without tying up your working capital in large, initial down payments.
- 100% tax deductibility—In most cases, Agri-Lease payments are fully tax-deductible business operating expenses.
- Bank/credit lines remain open—By using Agri-Lease to obtain what your business needs, you can keep your existing credit lines intact...and readily available.

If you want to know more about the financial benefits of Agri-Lease by Telmark...and how they may apply to your business...mail the coupon today.

Circle No. 142 on Reader Inquiry Card

AUGUST 1988/LANDSCAPE MANAGEMENT
To find an elite bluegrass at a friendly price, you ought to read between the lines.

Compare Fylking’s competitive price and advantages! Fylking forms a thick, lush turf that has improved disease and drought resistance. Fylking greens up earlier, stays green longer; can be cut as low as ¾ inch—even ½ inch. Fylking has been proven over many years of international turf testing.

Ask your seed distributor for Fylking.

KENTUCKY BLUEGRASS

Another fine, quality controlled product of Jacklin Seed Company

Application of a balanced fertilizer containing equal amounts of nitrogen and phosphorus helps.

Jim Tiedje, Ph.D., microbiologist, Michigan State University; “Black layer is very common in nature.” He believes there are four conditions that must be present to have black layer: anaerobic conditions; a food supply; sulfur compounds; and sulfur-reducing compounds. Anaerobic conditions form from restricted oxygen supply and increased oxygen consumption, he says.

Joe Vargas, Ph.D., Michigan State, notes the condition is not unique to sand but occurs in soil as well. “We could all tolerate black layer if it didn’t kill the turf.” he says. Vargas believes it is caused by a relationship between algae and sulfur. “Sulfur takes oxygen out of the system, making it anaerobic.” He says conditions are caused by excess irrigation, heavy rains and poor aeration down in the soil.

Stan Zontek, USGA Green Section, notes three types of black layer, two being: anything black, such as peat, but not a “bad black layer;” and a type which forms from physical differences in the soil such as layering. This type is easy to manage physically, he says. It can be combated with core aeration and back-filling with sand or rebuilding the greens.

“The third type gives us the most concern,” he says. It occurs just below the surface thatch layer, “even on USGA-specked greens. It’s the result of something living in the soil. This type is associated with greens in pockets of slow air circulation.” Sulfur is a cause, but not a direct one, he says. “Sulfur occurs naturally everywhere so backing off [applications] won’t help that much.” He explains that sand can have a hand in forming the layer if the high-draining media sits atop a much slower draining media like a clay soil.

Applications of a balanced fertilizer containing equal amounts of nitrogen and phosphorous also helps. Drainage improvements are necessary. “Build a new soil structure on top of the old but without causing layers.” He emphasizes not changing top dressing media radically but getting a gradual transition in the particle size mix. He suggests raising cutting heights in the summer and aerating both shallow and deep. “Black layer is not AIDS,” he concludes. “Not everyone is going to get it, and it can be gotten rid of.”

So if you have it, it’s not the end of the world. Solutions to the problem are agreed upon—even if the causes vary by source.
