TURFCO

Circle No. 160 on Reader Inquiry Card

New amine-compatible iron greens up turf in less than 48 hours.

Let us send you a sample of FeRROME⁺⁺C AC (amine-compatible); test it and see for yourself what a valuable tool it is in the management of turf and ornamentals.

Everett Mealman, President
PBI/Gordon Corporation

During the last several years, literally thousands of lawn care companies, landscape management contractors, and other turf professionals have been using Ferromec, and their experiences with it have been overwhelmingly favorable. The primary thing they like is the way it greens up turf virtually overnight.

But as they have become more familiar with Ferromec, they have discovered many other reasons for liking it, along with many other places to use it besides on turf grass. Perhaps the most pleasant discovery is the fact that it increases the efficiency of herbicides, and reduces the amount of fertilizer that is normally used.

Nitrogen will eventually produce a green color, but excess nitrogen plus turfgrass equals hay. Obviously, Ferromec is a better way!

On the other hand, some lawn care companies have commented that sometimes their employees have had trouble tank mixing Ferromec with multiple components which include an amine herbicide. Obviously, in today's economy if you're a lawn care operator, you'd rather have your people spending their time spraying lawns than worrying about tank mixing instructions, so we turned the problem over to our Dr. Roger Cahoy; as usual he came up with the right solution.

Now, we can offer Ferromec AC which is absolutely amine-compatible and yet is every bit as effective as the original Ferromec.

We want to send you a sample of Ferromec AC, so you can see for yourself what a valuable asset it can be. Meanwhile you might like to review some of the facts about iron which will help you understand how Ferromec works, and why no other company can offer you a product like our patented Ferromec sprayable iron.

Facts about iron that turf professionals need to remember.

First: Iron is essential for the synthesis of chlorophyll. No iron . . . no green.

Second: In most instances where ornamental turf is being grown there is not enough naturally occurring iron in a useable ferrous state to produce a vibrant green color. Accordingly, a chelated iron must be added to the soil.

Third: The only way to get the desired green color in a *relatively short time*, is to speed up the intake of iron through the roots by feeding enough nitrogen to accelerate the growth rate of the grass. This eventually will bring on the green color. But it will also bring on excessive growth which will cause unwanted mowing and exposure to disease.

St. Augustine grass lawn in Texas showing the darker color (right) produced by Ferromec Liquid Iron applied in early September at 8 oz./1,000 sq. ft. The green-up became visible within 2 hours and the darker color persisted until dormancy, a couple of months later, according to Wallace Menn of Bryan, Texas, a turfgrass specialist who conducted the test.

Half of this green at Hodge Park Golf Course in Kansas City was sprayed with Ferromec and, within 24 hours, the color change was dramatic. Under normal growing conditions, visual response usually occurs between 8 and 48 hours after application. Ferromec is also effective on trees, shrubs and herbaceous plantings.

FerROMEK[®] is totally different

Ferromec, on the other hand, works in a totally different way. Ferromec is unique. There is nothing quite like it on the market.

It is a patented process that involves bonding a ferrous iron molecule to a urea molecule. When Ferromec is sprayed on turf it is ingested almost immediately via foliar intake at the point where chlorophyll is formed. Once inside the plant, the iron-urea molecular bond

breaks apart because the plant has such a ravenous appetite for nitrogen.

The result is that the iron molecule in Ferromec goes to work almost immediately to create chlorophyll and, depending on the condition of the turf and the weather, the green-up will occur any time within a range of eight to forty-eight hours.

And, of course, the green-up occurs without the excessive growth that would occur if a similar amount of iron was ingested

through the roots along with the nitrogen that would be necessary to allow the iron uptake. Using Ferromec for summer turf is ideal because it reduces the amount of nitrogen you need to apply.

Special formulas for special problems

Iron is definitely established as an essential micronutrient required by all plants. Yet the amount required can vary dramatically depending on the PH of the soil and the composition of the fertilizer being used.

Furthermore, there are many situations where zinc and/or manganese are required in addition to iron. Accordingly, we have developed special formulations of Ferromec to cover such situations.

For more information about the use of iron and for your free sample of Ferromec AC, call us.

"We put down a total of 8 ounces of Ferromec AC per 1,000 square feet when we prepared the Rose Bowl for the 1987 Super Bowl," says George Toma, noted consultant who has been responsible for preparing the fields of all the Super Bowls played to date. "We'll also use Ferromec AC for the 1988 Super Bowl in San Diego," says Toma.

Cut aeration labor by 75 percent.

Introducing the new Cushman Core Harvester™ attachment.

Now one person in a Turf Truckster® vehicle can scoop up, load and dump aeration cores in the same time it takes three workers with shovels. In fact, with the revolutionary new Core Harvester attachment, you can clean up an average 7,000 sq. ft. green in about 15 minutes — two to three times faster than you've ever done it before.

As gentle as it is quick.

The Core Harvester's unique

spring-balanced parallel link flotation system protects your fine turf from scuffing. Because they float, the Core Harvester's gathering blades automatically adjust to undulating greens for quick, gentle operation.

The Core Harvester attaches easily to Turf Trucksters, and retrofits 1985 and newer models. After the Core Harvester has been attached, it's easy to take off by just removing four bolts, two hoses, and you're ready to go.

There's nothing else like it on the market today. The new Core Harvester, only from Cushman. For a convincing demonstration on your course, contact your Cushman dealer today. Or call toll free: 1-800-228-4444.
