Three ways Mazda trucks outperform the competition.

If you're about to commit your company's resources to building a truck fleet, you've probably looked at Ford Ranger, Chevrolet S-10, Toyota and Nissan. But your shopping list isn't complete until you've taken a good look at Mazda. Because Mazda trucks offer some very important advantages over the competition.

Mazda trucks: Number one in overall customer satisfaction for three straight years:

their trailer and taking ours with all the spare equipment,” Rom says. And to keep track of equipment belonging to each crew, all equipment and trucks are color-coded so that every piece of equipment has a permanent home on a given truck.

“The company is divided into departments and branches,” Rom explains. “Each branch has a color assigned to it, and every tool in the branch has a color stripe of that color. Then each truck within the branch has a second color assigned to it, and every tool on that truck also carries a stripe of that color. One color band is two inches wide and the other is one inch wide.” Tools are painted in the same colors as the truck to which they are assigned. Finally, a complete list of the tools assigned to that truck is mounted on the truck’s side and covered with plastic as a permanent record of that truck’s tool inventory.

Inventory at Chapel Valley is taken quarterly, during which time everyone must account for their tools. “If you need a replacement for a tool due to wear and tear, you return the old tool to our internal company store and we issue a new tool. If you’ve lost a tool, we fill out a sheet that records that fact, issue a new tool, and charge the crew for it from an accounting point of view,” Rom continues. (Crews are not directly charged for such tools.) The whole record-keeping system gets strong support from a bonus system that rewards those crews that have taken good care of their tools.

Says Rom: “We tally what tools a crew has lost during the year, and this effects the bonus that each member receives.” A perfect record earns 100 percent of the bonus; lost tools cause a reduction of the bonus.

Most recently, the company has begun putting the name of the foreman on the side of his truck to add a further note of identity between man and equipment, and to instill even more pride.

A sense of pride
Rick Haas, course superintendent at Corpus Christi (Texas) Country Club believes that it is an employee’s pride in his work and a feeling of responsibility that is the key element in assuring good equipment treatment.

“It’s the mechanic’s job when a mower comes back to check that the oil is right and that is has been greased properly and that sort of thing, and to go ahead and do those things if they haven’t been done,” Haas says. “Then it is also the responsibility of the employee who will be using the equipment the next day to run through the same set of checks again before he uses it. That way, we are checking it two or three times before it is used.”

But the real key is “that they want to feel like they are important and appreciated and that it is important to do their job right,” Haas continues. “You’ve got to give them responsibility and work with them, and it takes some time.”

Haas uses a big scheduling board in the employee lunchroom to keep employees informed about the jobs they’ll be doing.

“I try to get them involved by showing them what has to be done for the whole month and what equipment we will be using. This way, they begin to feel like they are involved in the overall performance of the golf course. I also explain to them that if we can keep our overall costs down, it will mean more for them—a better raise at the end of the year.

“Overall, if you get the respect of your employees and you respect them one-on-one, they are going to treat your equipment with respect, too.”

LM

Exmark MFG. CO. INC. BOX 748 BEATRICE, NE 68310

Outstanding durability.

Exmark’s complete line of tough 21" mowers is better by design. Like every Exmark mower, these 21’s are engineered, built and tested to endure years of rigorous commercial use. They stand up to the demands of 72-hour work weeks. Exmark guarantees it — with our two-year limited warranty.* For more information or the dealer nearest you, call today: 402-223-4010.

*Engines warranted separately.

When you demand durability, demand Exmark.

The mark of excellence in professional turf care equipment.

NOVEMBER 1988/LANDSCAPE MANAGEMENT 43
645 - MANAGEMENT OF TURFGRASS DISEASES
by J.M. Vargas
Identifies turfgrass diseases by description and illustration. Includes a holistic approach to healthy turf and lawns. Presents practical management strategies for golf courses, lawns and athletic fields. 204 pages, illustrated. $26.75

640 - TURF IRRIGATION MANUAL
by James Watkins
A guidebook for engineers, architects, designers and contractors. Keeps pace with the latest developments in turf and landscape irrigation. Specific chapters devoted to rotary sprinkler design systems. Golf course design systems and expanded engineering and reference material. $26.35

225 - TURFGRASS MANAGEMENT
by A.J. Turgeman
Revised edition. Covers the latest developments in turfgrass science and technology. Heavily illustrated with dozens of new drawings. Provides specific recommendations for applying the newest pesticides, fertilizers and other materials to combat turfgrass problems. A valuable reference for diagnosing problems and determining their causes. $29.33

615 - TURF MANAGEMENT FOR GOLF COURSES
by James Beard
Written by an eminent turfgrass researcher, this USGA sponsored text is an ideal reference and "how to" guide. Details all phases of golf course design and construction. Turf management, course administration, irrigation, equipment and disease and pest control. Fully illustrated. $52.75

510 - HORTUS THIRD
from Cornell University
A 1,300 page concise dictionary of plants cultivated in the United States and Canada. A reference book which every horticulturist should have. $125.00

570 - WESTCOTT'S PLANT DISEASE HANDBOOK
by Kenneth Horst
This fourth edition offers professionals the latest diagnostic and disease control information. Plant entries designed to simplify diagnosis, plus background on the classification of plant pathogens. This handbook gives a specific description of each disease, susceptible plants, specific symptoms of the disease, reported locations and control measures for each disease and their side effects. $43.95

800 - THE GOLF COURSE
by Cornish and Whitten
The first book ever to give the art of golf course design its due, and golf course architecture the credit and recognition it deserves. 320 pages and 150 color and black and white photographs. Traces the history and evolution of the golf course, analyzes the great courses, shows how they were designed and constructed. $35.00

865 - ARBORICULTURE: THE CARE OF TREES, SHRUBS AND VINES IN THE LANDSCAPE
by Richard W. Harris
Provides comprehensive coverage of complete planting, site analysis, preparation and selection of planting methods, fully detailed coverage of fertilization, irrigation and pruning guidelines on preventative maintenance, repair and chemical control, how-to's of diagnosing plant problems, practical data on non-infectious disorders, diseases, insects and related pests and pest management. $92.00

410 - NATIVE TREES, SHRUBS, AND VINES FOR URBAN AND RURAL AMERICA
by Gary L. Nightrhoe
This award-winning reference to native U.S. plants has now been expanded to include shrubs and vines. Over 250 major species are characterized by form, branching pattern, foliage, flower, fruits, habitat, soil, hardness, susceptibility, urban tolerance and associate species. Includes unique color-coded keys that classify plant species by visual characteristics, cultural requirements and ecological relationships. $79.95

720 - SHRUB IDENTIFICATION
by George Symonds
Pictorial key to identify shrubs. Contains more than 3,500 illustrations to check specimens. Popular and botanical names are given for each shrub and handy index tabs for quick reference. $12.95

44 LANDSCAPE MANAGEMENT/NOVEMBER 1988
CLEARING PROFITS WITH THE SNOW

The work is difficult and the hours long, but landscapers are making the necessary efforts—and money—from snow removal.

by Jerry Roche, editor

Snow removal is not an art or a science. Rather, it is a lot of both.

"It is an expensive business, but money can be made, given the right set of circumstances," says Thomas Mann of The Caretakers, Eagan, Minn.

Mann, Bill Peterson and Eldon Dyk were members of a panel on the art and science of snow removal during a recent meeting of the Associated Landscape Contractors of America.

They offered a series of tips on how their businesses make snow removal more profitable.

"We refer to snow removal as 'blood money,'" says Peterson of DuBrow's Nurseries, Livingston, N.J. "They're days of hard work and sleepless nights."

Dyk, of Allen Keesen Landscape, Denver, Colo., refers to the winter job as a necessary evil. "There are profits involved, but so are liabilities. For those reasons, we only remove snow for our regular landscape customers."

The major liability is taking a plow into an obstacle hidden by the snowfall. That's why Keesen drivers visit their sites in early October for a visual inspection.

The Caretakers keeps a "Plow Book" for drivers. The book contains a schematic for each job and special notes on high priority areas, where to dump the snow and phone numbers for emergencies. Mann says it's a three-ring binder with an acetate cover that works well. "Drivers must know all jobs," continues Mann.

And "corners, drains and fire hydrants must be marked beforehand," Peterson adds.

DuBrow's subcontracts most work to 22 subcontractors who use 40 pieces of equipment. DuBrow's maintains 22 pieces of equipment for its own use, including four-wheel-drive pick-up trucks with eight-foot plows, two-wheel-drive dump trucks with eight-foot plows and other trucks with 10-foot plows. "We also have Case W14s and W20s with two-yard buckets that can pile snow very high. We use those in community parking lots," says Peterson.

An eye on the storm

To get one step ahead of the game, Mann's company monitors local television broadcasts and regularly communicates with the National Weather Service. Most of the company's plowing is done at night, when the heaviest snow seems to fall.

Other problems associated with snow plowing, the trio notes, are scheduling and communication. "With one to four inches of snow, we start at 4 a.m.," says Dyk. "With more than four inches, we're starting around 2 a.m." At Keesen Landscaping, supervisors are notified of an overnight snowfall. The supervisor then calls plow drivers, who in turn call their crews. "Plowers and two shovelers are sent out at the same time. Each driver has a regular route.
For over 35 years Snapper has been building the highest quality outdoor power equipment money can buy. Lawn care professionals know that such quality means lasting dependability and steady profits. And now Snapper makes this quality available in a wider selection of commercial products for your business.

All heavy-duty walk mowers come with the power and options to make big jobs a snap. Pick from 32" or 48" models. A 60" model will be available soon. Our mid-duty walk mowers come with 30" or 41" decks featuring pivoting front ends to reduce scalping. 21" Hi-Vac® walks feature 3 bushel grass catchers, and have 5 hp engines with heavy-duty parts for longer life.

Snapper is America’s number one choice in rear engine riders. Our Extra Tough models feature 12 hp engines and 5 forward speeds with on-the-go shifting. Our lawn tractors give you a choice of 33", 41" and 48" mowing decks.

There’s more to this business than mowing and Snapper has you covered with power pluggers, power rakes, trimmers, edgers and even a 2-stage commercial snowthrower.

So, for day in day out profitability, invest in Snapper quality. Write Snapper Power Equipment, Dept. 000000, McDonough, GA 30253.
In case of emergency, a mechanic becomes available at 6 a.m.,” Dyk says.

Mann says The Caretakers tries to plow in two stages. The first stage is the “open-up” stage which is completed by 7 a.m. so employees of commercial clients can get in and out of parking lots first thing in the morning. The second stage is the “complete” stage, which is full cleaning of the lots.

“Communication is very important with commercial customers because of the parking lots.”

Mann has found 1%- to 8-foot plows to work best. And each of the trucks is equipped with a double battery system to cope with the sometimes frigid Minnesota winters.

Many companies like DuBrow’s hire part-timers just to work snow shifts. DuBrow’s, according to Peterson, usually hires 40 extra people just to shovel, most from the unemployment lines.

How to pay the help? Mann has a standard rate for up to six inches of snow: for six to 10 inches, the standard rate is doubled; for 10 to 14 inches, the standard rate is tripled. For more than 14 inches of snow, Mann pays employees by the hour.

To insure his financial stability, Mann also uses what he calls a “no-snow” contract. That is, if it doesn’t snow through the winter, his company still gets a standard minimum retainer for being available.

“While it pays to have a variety of types of contracts,” notes Mann, “there are different ways to set up a contract. There’s a monthly rate as soon as the snow comes, a yearly rate, or a yearly rate with minimum, an hourly rate and so on.”

Sand, salt and calcium chloride are the most common materials to melt ice and snow on sidewalks. Mann, for instance, charges $165 an hour for salt and sand applications.

Is snow removal “blood money,” then? Judging by the panel of ALCA experts, maybe. But it’s green, and it is money.

LANDSCAPE MANAGER
OF THE YEAR

By getting the most out of his personnel and equipment, Roy Peterman made the Brigham Young University campus a model of good management.

If Roy Peterman were a pie chart, he'd be made up of many different pieces. The biggest pieces would show his devotion to his wife and seven children, while his professional pieces would be pretty evenly divided between manager, planner, accountant, evaluator and teacher. As grounds manager at Brigham Young University, he put all the pieces together to become our Landscape Manager of the Year.

In five years he has streamlined his organization from 56 full-time employees to 38 while increasing their workload one-third. Still, his labor costs are $1 a cent less per square foot than the national average.

Still not impressed? Well, the next time you're in Provo, give him a call and ask him how many hours his people spent repairing sprinkler heads in the first quarter of 1988 (798.5) or how many minutes it should take to cultivate around a tree according to his time/motion survey (11 minutes). By pinpointing costs, Peterman has been able to effectively schedule and monitor the more than 300 total employees under his supervision with great detail. In addition, he has created The 50 M's Physical Plant Resource Model, which defines the responsibilities and accountability of all employees, from director to worker, within the department.

A Capital Needs Analysis Equipment Replacement and Renewal List is also in place that tells department heads what equipment is on hand, when it was purchased, what it cost and its life cycle. The system helps Peterman set up his equipment budget early and provides an excellent method to evaluate the performance of each piece.

Peterman's artistry can be found in his description of a successful landscape manager, of which he writes: "...he will have a vision of our age and how he can positively enrich the lives of those who use the landscape by realizing that to create an attractive, ever-changing environment from living materials is the highest form of art."

Certainly the BYU campus is a testimony to his philosophy of landscape management. It hosts more than 50,000 square feet of flower gardens, 8,608 trees, 355 acres of turf and more than 40 acres of shrubs that are designed, in Peterman's words, "to ensure an optimum atmosphere for learning with peace and serenity available to each individual."

In the future, Peterman hopes to complete the requirements for a physical plant administration degree at BYU, write a book that offers a holistic approach to landscape management and improve the training capabilities of his department. It's hard to imagine him not succeeding in any of those endeavors.

Brigham Young University's sports fields undergo a six week renovation period where they're thatched, aerated, topdressed, overseeded, rolled and fertilized.
