Better turf from improved breeding methods

Advances in the art of plant breeding and associated disciplines are meeting today's need for superior turfgrass cultivars, according to Dr. C. Reed Funk of Rutgers University. Dr. Funk, addressing the Sixth International Turfgrass Research Conference in Tokyo this summer, said researchers today continue to strive for turfgrasses that exhibit increased pest resistance, improved stress tolerance and reduced maintenance requirements, and that adapt to problem areas.

Dr. Funk focused on three areas of turfgrass breeding that have received considerable attention recently: turf-type perennial ryegrass, tall fescue and Acremonium endophytes for improved insect resistance.

Perennial ryegrasses
Perennial ryegrass, an important cool-season grass for turf and forage use, will be used in Europe, the U.S., Great Britain, Japan, Australia, New Zealand and Canada to the tune of 30 million kilograms of seed in 1989, said Dr. Funk. It is best adapted to fertile soils and maritime climates having mild winters and cool, moist summers.

Perennial ryegrass in Great Britain has been used for forage for centuries, figuring prominently in pastures and more recently in high traffic athletic fields. Still, its lack of tolerance to temperature extremes limited its use in this country.

"A revolution in turf-type perennial ryegrass started in the United States in the mid-1960s when Howard Kaerwer and Robert Russell developed and promoted NK-100," said Dr. Funk. This spawned Manhattan, Pennfine, Citation, Pennant and All-Star, he noted.

The early success of Manhattan and Pennfine led to a rapid expansion of turf-oriented ryegrass breeding programs in the U.S. and Europe, leading to turf with improved wear tolerance, stress tolerance, mowing quality, more efficient seed production and enhanced endophyte performance.

"Prospects for continued genetic improvement are great," said Dr. Funk, adding that greater cooperation among scientists around the globe and

Better cooperation and advances in biotechnology is allowing researchers to make great strides in developing good turf.

advances in biotechnology are allowing researchers to make great strides in the development of good turf.

prove their stress and pest tolerance.

Endophytic fungi have been known to occur in the tissues of many grasses for more than 100 years, said Dr. Funk. And recent studies have revealed an "astounding diversity of fungal species existing within the tissues of many healthy plants."

Endophyte-enhanced turf
Many grazing animals perform poorly after consuming Acremonium-infected tall fescue and perennial ryegrass, prompting researchers to work toward eliminating the endophyte from those cultivars. However, improved insect resistance, persistence and performance in many endophyte-containing plants make them ideal for turf and conservation, said Dr. Funk.

"The ability of endophytes to produce several biologically active toxins undoubtedly contributes to a broad spectrum of insect control," noted Dr. Funk. Instances of better summer survival, enhanced fall recovery and reduced weed invasion has been observed in perennial ryegrass, tall fescue, hard fescue, and chewings fescue turfs containing high percentages of endophyte-infected plants, he said.

"Enhanced resistance to harmful insects was undoubtedly responsible for some of this improved performance," notes Dr. Funk, adding, "improved stress tolerance may also have been a factor."

No adverse effects of endophytes in turf has been found, said Dr. Funk, and many types of endophytes exist in our major turfgrass species. Further collecting, studying and using these endophytes should make them even more useful in the future. Indeed, breeding programs have been initiated to transfer useful endophytes to elite cultivars and germplasm population of perennial ryegrass, hard fescue, tall fescue, chewings fescue and blue sheeps fescue, he said.

"Utilizing desirable selected endophytes to enhance the persistance, performance, pest resistance, and stress tolerance of turfgrasses has considerable potential," said Dr. Funk.

—Will Perry
This valve offers a different angle

The 950-A, a new, 3-inch angle valve has been added to Superior Control's 950 series of automatic brass valves. According to Superior, angle valves design to reduce scalping. Smooth tread pneumatic casters have been added to virtually eliminate marking of soft or wet turf.

The polyethylene fuel tank is larger but lighter, for less weight and less refueling.

Safe liquid storage now with EPA-approved sheds

Haz-Stor hazardous liquid storage buildings comply with EPA regulations and model building codes. A new brochure is available which illustrates explosion relief panels, fire protection systems, explosion-proof lighting, secondary containment sump and other protective features.

Justrite Manufacturing says the Haz-Stor buildings are rugged and designed to provide effective and approved storage. They're delivered pre-built to a plant site.

New forklift comes back from the drawing board

JCB Inc. of White Marsh, MD has introduced the improved model 930 rough terrain forklift. The body and chassis design now give operators new front fenders and steps for easier entry and exit. A new sloping hood design offers greater visibility to the rear of the unit. A new heavy duty fuel tank and hydraulic tank are easy to reach.

JCB has also made improvements in the operator compartment. Some new features include an improved instrument console, and hydraulic control levers angled toward the operator in easy reach. The door is wider, grab handles are bigger, and the Bostrum seat has been improved.

The improvements continue with the introduction of the 1000 Series Perkins, naturally aspirated engine, with key engine shut off and a new planetary drive axle. There are also two new mast features: a 37-degree hydraulic forward mast tilt for easier mast positioning from the operator's area when the mast is in the travel position; and outside mounted mast tilt cylinders for easier service access.

For winter, managers count on the magnificent seven

Track-drive snow blowers lead the new line of seven machines from John Deere. The Deere-Trax system is designed for greater traction and stability on sloped, gravel or icy surfaces. In hard-packed snow or icy conditions, the machines' weight can be shifted to the cutting edge and auger height can be lowered for maximum performance by raising the handlebars, then locking the variable weight transfer system to the desired position.

This feature is available on the 5-hp TRX24 and 8-hp TRX26. Other models include the 5-hp TRS24 and 8-hp TRS26 wheel-drive units. The 8-hp TRS27 and 10-hp TRS32 provide greater snow removal capacity for deep snow areas.

All seven walk-behind machines are powered by Tecumseh Snow King engines. All have an operator-presence safety system that allows one-hand control.

Improved rotary mower easy on turf, operator

Textron's Jacobsen Division has made some improvements in its Crew King mid-size rotary mowers. The Crew King now features a quick height of cut adjustment that can be done without tools. New low profile caster struts give the operator a better view of the cutting path and are less likely to catch on low hanging branches and other obstructions.

The Crew King has a floating deck

models have superior flow characteristics and are sought by irrigation designers, especially those outside the U.S.

A pressure-regulating version of the 3-inch angle valve, model 950-A DWPRS, is also available.

When good shots end up in bad lies on dollar spotted fairways, it can spot your course’s reputation.

That’s good reason to put Rubigan® in play. Dollar for dollar, nothing controls dollar spot better.

Just one Rubigan application controls even resistant strains of dollar spot for up to 28 days. And one case of Rubigan will treat up to 8 acres of greens and fairways.

Rubigan is the only fungicide labeled to treat and prevent all these other turf spoilers, too: Fusarium leaf spot, necrotic ring spot, summer patch, take-all patch and spring dead spot—plus large brown patch with a Daconil 2787® tank mix.

Keep your fairways, tees and greens dollar spotless — looking clean and beautiful all season long. Get Rubigan from your Elanco distributor. Or call toll-free: 1-800-352-6776.

Backpack blowers feature autostart and recoil

The RedMax Models EBA430 and EBA440 feature an auto-start and recoil system for smooth, easy operation. According to RedMax, operators are able to start the blower by pushing a button rather than pulling a cord. The unit does not have to be removed for restart.

Equipped with 41.5 cc engines, the two models generate airflows of 600 cubic feet per minute. Each unit features a self-charging, battery-type autostarter that is conveniently located for easy access.

Other features include a patented, force-ventilated backpad to keep the operator cool, rubber mounts that insulate the operator from vibration, and a low-noise muffler.

A heavy-duty air cleaner is included.

Folding drill for state-of-the-art, exact seeding

A new folding drill from The Tye Company of Lockney, Texas features a new clear-view, "wishbone" hitch. This enables the operator to see the drill during planting, and gives him a clear view of the road behind.

Tye says the hitch design eliminates the cumbersome center hitch used on most folding drills and planters.

The hydraulic system folds the drill quickly and easily to a 13.8 feet transport width which, according to Tye, is up to 2 feet narrower than most other models.

Ground clearance is 15 inches. Four lift-gauge wheels provide optimum flotation to assure positive depth control. Separate hydraulic lift and folding circuits require only two tractor remotes.

Eliminate standing water, Improve turf drainage

Enkadrain H is a three-dimensional, 18-inch wide, compression resistant nylon mesh wrapped in a filter fabric that forms a high capacity drainage conduit. Designed for standing water and wet areas on golf courses and athletic fields.

The one-piece prefabricated system provides a consistent drainage and requires a narrow trench to install. The fabric filters out soil particles for effective drainage. After water passes through the fabric, it flows along the core.

Akzo Industrial Systems says Enkadrain H is less expensive and easier to install than traditional designs that use sand, aggregate or gravel for drainage.

HELP WANTED

BRANCH/SALES MANAGERS; JUNIOR AND SENIOR LEVEL. Orkin Lawn Care offers more to our Managers, so why settle for less? Our company is a leader in its field and expansion dictates the need for senior level Branch and Sales Managers to maintain our high-standards and the integrity that has built the Orkin reputation. We offer unlimited room for advancement into top-level management, salary plus incentive bonus, and a comprehensive benefits package to talented, ambitious Orkin team members who are dedicated to success. You will report directly to Zone Managers and be required to: "Initiate and develop effective work atmosphere, "Meet financial objectives — revenue, cost control, profits and profit margins. "Enforce Orkin policies and procedures "Maintain a strong customer base "Select and train new employees. If you can fulfill these objectives and have the aptitude to prioritize duties and projects, send a confidential resume to: ORKIN LAWNCARE, PAT GUY, 2170 Piedmont Road, Northeast, Atlanta, GA 30324. 12/89

LANDSCAPE MAINTENANCE SUPERVISORS: Rapidly expanding landscape maintenance firm seeking experienced, quality individuals to be field/working supervisors. Tremendous opportunity to grow. Full benefits. Contact: Tandem Landscape Company, 33W480 Fabyan Parkway, West Chicago, Illinois 60185, Attn: Glenn Kedzie. TF

LANDSCAPE MAINTENANCE: Leading Kansas City Landscape Company has immediate openings for talented, experienced, and aggressive persons in residential/light commercial design and sales, and in management of residential landscape maintenance. A.S. or B.S. in Horticulture or related fields preferred. Experience, organizational skills and a customer service attitude a plus. Competitive compensation and benefits package. Send a resume with experience and salary history to: HERMES COMPANY, INC., P.O. Box 14336, Lenexa, KS 66215. (913)888-2400. 12/89

MANAGERS -- SUPERINTENDENTS -- AND ASSISTANTS: Innisbrook, Florida's premier resort, is currently accepting resumes for the above mentioned classifications for our golf courses and general grounds areas. We have 63 holes of Florida's finest golf and 950 acres of beautifully landscaped resort property. Excellent benefit program, including bonus and clubhouse membership, go with these positions. We offer opportunities for advancement to quality oriented professionals. Send resume in confidence to: R.A. Schust, Personnel Dept., Innisbrook Resort, P.O. Box 1086, Tarpon Springs, FL 34689-1086. EOE. 12/89

MANAGER/LAWN CARE DIVISION: The Panoramic Corp. is looking for an Agronomist/Horticulturist to develop and manage our lawn care division. The right person will have a thorough knowledge of landscape horticulture as it applies to Midwest (Chicago) region. If you are looking for challenge and growth and have the technical expertise and experience to back it up, we want to talk with you. A degree in horticulture, agronomics is helpful. Send resume and salary history to: Al Bofinger, 54 N. Eisenhower Lane, Lombard, IL 60148. 12/89

AREA MANAGER: Large East Coast commercial landscape and maintenance contractor needs well qualified Area Manager. Landscape-related degree preferred with 5 yrs. experience a must. Supervisory experience required. This is your opportunity to join an innovative and growing team. Send resume or call Ruppert Landscape Co., Inc., 17701 New Hampshire Ave., Ashton, MD 20861, Attn: Mr. Otero (301)774-0400. 12/89

PRUNING MANAGER NEEDED: Aggressive multi-branch lawn and tree care co. is expanding into pruning. We are looking for a leader with a minimum of 5 years of experience in pruning, climbing and supervising. We offer excellent salary, benefits, and bonus potential. Come live in the beautiful Pacific Northwest. Contact Dan Wareham, Senske Lawn and Tree, 3030 W. Clearwater, Suite 100, Kennewick, Wash. 99336/509-736-0754. 12/89

Horticulture

FOREMAN/W Flower Garden Division

Longwood Gardens, Inc., a world renowned horticultural display garden, has an opening for an experienced person to supervise the flower garden division.

Candidates should have a BS degree in Horticulture with a concentration of course work in landscape design or a bachelor's degree in Landscape Architecture and at least 3 years of experience in outdoor floral display, design, installation and maintenance. Good planning, communications, design, scheduling, coordination and supervisory skills are required.

We offer an excellent starting salary and a fringe benefits package. To explore this outstanding opportunity, please mail your resume to: Mr. Kiran Taunk, Business Division Manager, Longwood Gardens, Inc., P.O. Box 501, Kennett Square, PA 19348. EOE, M/F.

DECEMBER 1989/LANDSCAPE MANAGEMENT 45
Supervisor/Sales position in sunny California for tree care firm. Applicants must be thoroughly versed in all phases of tree care and have bidding experience. EOE. 816-445-0989. 12/89

TAKE ADVANTAGE OF THE OFF SEASON! Remember how it was last spring trying to find the right people. We have foremen, supervisors, managers, irrigators, architects, etc. Let us pre-screen, send you resumes and set up interviews. Call Amigos today (214)634-0500. 3/90

LANDSCAPE MAINTENANCE ASSISTANT MANAGER GROUNDS MANAGEMENT DIVISION

Well-established New Jersey Company is seeking the right individual to manage a division of our company. You must be well-organized, sales minded and have a pleasant personality. Minimum two year horticultural degree, coupled with at least 3 years of managerial experience required. If you have the drive and ambition to join a young, aggressive management team, send your resume in confidence to LM box 473.

EOE M/F

LANDSCAPE MAINTENANCE - SUPERVISOR:

Opportunity for experienced, highly motivated individual to join an established, award winning landscape company in the San Francisco Bay Area. Send resume in confidence to: Wayne Richards, Cagwin & Dorward, 8001 Binford Road, Yeadon, PA 19050. (215)727-5539. 12/89

"Consider all of your employment options in the irrigation and landscape industries. Call Florapersonnel, the international employee search firm for the ornamental horticulture industry. Lo-torq means long-life.

Exmark introduces the new Turf Tracer™ 1800 — the latest addition to our growing line of Exmark professional turf care equipment.

This power-packed unit sets new standards for walk-behind mowers. The Turf Tracer’s unique 60-inch floating cutting deck actually "traces" the contours of uneven terrain ensuring a see-it-to-believe-it cut, every time. The Turf Tracer’s lo-torq gear drive takes stress off the transmission, increasing transmission life. Convenient control panel puts electric start and electric blade clutch at your fingertips.

Choose the mower that is setting new industry standards. The Exmark Turf Tracer™ 1800.

Exmark — Better, over the long run.

For the dealer nearest you call Exmark: 402/223-4010.
PROBLEM MANAGEMENT

by Balakrishna Rao, Ph.D.

Line clearance in drought

Problem: Should electric utilities reduce or maintain their current line clearance pruning programs during an extended drought period? The background for this involves utilities maintaining various distances between the energized wires and the encroaching trees. When trees become stressed, will continued pruning around energized wires affect the survivability, and what is the best approach to address people’s concerns with this kind of pruning? (Minnesota)

Solution: The answer to the first part of your question is yes. Greg Mazur, utility technical advisor from Davey Tree Expert Company, found that “the excessive heat and drought did not reduce shoot elongation,” after studying more than 600 trees in northwest Wisconsin and shoot regrowth from pruning cuts towards the energized wires. Therefore, continue to prune the trees on your regular line clearing cycle.

As for the second part of your question, as far as we know there is no documented research data available for comments. However, the following comments might be helpful in explaining the situation to your concerned people. Drought has been, and perhaps will be in the future, occurring every now and then in many parts of our world. Many utility companies are conducting line clearing work throughout the growing season, year after year. But no severe effect attributable to pruning in previous years has been documented to date.

In all likelihood, drought has occurred many times in the past to pruned street trees without significant changes in survivability.

Our experience has been that minimum sunscald and/or dieback can occur in response to pruning but not widespread decline or mortality of pruned trees. We have seen a large number of established pruned or unpruned street trees decline. The problem was associated with abiotic stress factors, insect and/or disease activity. Among these, borer, cancer and wilt diseases are considered to be the most destructive disorders. Often this type of declining syndrome can be coinciding with the pruning activity and then it becomes a concern to the public.

Pruning of plants like oaks and elms which are susceptible to wilt disease should be avoided during the insect vector flight period to minimize the disease spread. However, if these trees have to be pruned, application of a wound dressing compound might be beneficial.

Fumigant use on diseased trees

Problem: How good is Vapam soil fumigant in managing the root transmission of Dutch elm disease and oak wilt disease? What is the best way to apply Vapam, and how near to the healthy tree can it be applied? (Michigan)

Solution: Vapam soil fumigant can prevent root graft transmission of Dutch elm disease and oak wilt disease if it is done properly and the product performs well. For best results, read and follow label specifications. Use only when ground temperature at 3 inches is above 60°F and less than 90°F. The soil is usually warm enough when the spring flowering shrubs such as forsythia are blooming.

Be careful when using Vapam around desirable plants. It can severely injure or kill any plants that it comes in contact with.

Vapam releases a gaseous fumigant in the soil. This gas later dissipates, leaving the soil ready for planting. Do not inject it within 10 feet of the dripline of healthy plants. After injecting Vapam, you should wait for 10 days to remove the diseased trees. This will allow the fumigant to spread effectively and manage the root graft transmission. Vapam will kill the roots of diseased trees as well as healthy trees.

Apply one part Vapam into 15 parts water (1 oz. per 1 pint water, or 8 oz. Vapam per 1 gallon water). One gallon of Vapam mixture will treat 64 ft. of line or 128 holes. Where feasible, a chemical barrier of Vapam should be placed between a newly-diseased and a healthy tree if they are growing within 40 feet of each other. With an electric drill and auger, or crowbar, make holes six inches apart and approximately 18 inches deep along a line midway between these trees. Pour in 1 pint of the Vapam mixture per hole and immediately replace the soil and tamp the opening closed. For convenience, marked ropes can be used to space the recommended number of holes in a desired line.

The turfgrass in the treated area will also be killed. These areas may require seeding only after the fumigant odor is gone. Tilling or cultivating the Vapam treated area will help speed up this process. Radish seeds can be planted to detect any residual effect of Vapam, 10 to 15 days after application. If plants are normal, the treated area is safe to plant a lawn.

Make sure to wear safety protective equipment and thoroughly clean all tools after treatment to avoid any injury from future use.

Balakrishna Rao is Manager of Technical Resources for the Davey Tree Co., Kent, Ohio.

Questions should be mailed to Problem Management, LANDSCAPE MANAGEMENT, 7500 Old Oak Boulevard, Cleveland, OH 44130. Please allow 2-3 months for an answer to appear in the magazine.
"Tank mixer" that is.

- Lawn Plex® is the FULLY CHELATED iron product you should use in your tank mix.
- It contains 8% Iron plus 8% Sulfur, and is COMPATIBLE with your fertilizers and pesticides, even in low-volume applications.
- Lawn-Plex® is also a TRUE BUFFER which means, it will adjust your tank mix pH for maximum pesticide performance.

All of these benefits, at a User Friendly Price.
