"We planted the 12th hole on Singing Hills' Willow Glen Course to SR 1020 two years ago, and it performed admirably. What's really significant is that members keep asking what we've done to the 12th hole that makes it putt so well! The members like SR 1020's performance from the players' point of view; we like that too, but we also value that we haven't had to change our normal greens maintenance program to achieve the results."

David Fleming, C.G.C.S.
Superintendent, Singing Hills Country Club
El Cajon, CA

"The newer golf course greens planted to Penn-cross look beautiful, but they don't putt like the old South German Bent greens. The putting surface of those old greens is fine-textured, not thatchy or grainy, and the old greens don't show the spike marks like Penncross. We've been needing bent-grasses bred for golf quality as well as turf quality for a long time, and it looks like SR 1020 and Providence fill the bill!"

Peter Trenham
President, Philadelphia Section PGA
St. David's Golf Club
Wayne, PA

Finally! New Cultivars Bred To Meet the Needs of the Superintendent and the Golfer!

At Seed Research, we listen to your needs. You've been wanting a bentgrass that's tough, looks great, and is easy to maintain...but one that's also fine-textured, with good putting green quality. And available.

So when the bentgrass shortage became apparent in 1983, we acted quickly and acquired parental germplasm from two of the finest bentgrass collections in the country—the University of Rhode Island and the University of Arizona. From those collections, we developed two exciting new creeping bentgrass cultivars, Providence (SR 1019) and SR 1020.

Evaluation on golf courses and at universities has shown that both these bents produce the kind of turf you demand: dark green, aggressive, competitive, easy to manage, good disease resistance, good stress tolerance, and compatible with existing bents for overseeding.

And, for real golfers like Peter Trenham, SR 1020 has proven it provides everything desired in a putting green bent: fine texture, uniform surface, and most importantly, an absence of grain, so the ball holds the line for true putting accuracy.

SR 1020 is already in production, and excellent quantities of certified seed are available. Providence will be available in August of 1989. With either of our exclusive new bent-grasses, you can look forward to a good-looking grass that will give you the performance you demand and the putting green quality your golfers prefer!

NEW AND IMPROVED

With 1989 comes new and improved mid-size riding mowers. LANDSCAPE MANAGEMENT takes a look at some of the innovations that landscape managers will see in their dealerships this spring.

As commercial/industrial acreage gets bigger, so do the commercial riding mowers responsible for keeping the grass neat. So says Mike Packer of the Bunton Co., one of the makers of this type of mower.

"I think what we're seeing is a step up in size of mowers," Packer tells LANDSCAPE MANAGEMENT. "Guys using a 21-inch walk-behind are stepping up to 32-, 36-inch mowers. Those using 36-inch mowers are going up to 48 and 52."

This type of equipment is known in the industry as the mid-size rider.

"Why?" asks Packer. "Productivity. Companies that are stepping up into larger properties need the larger capacity machines, but something that's affordable. The nature of the business is that they make a lot of money, but never seem to have it (to spend on new equipment)."

Because the equipment is getting larger, it also pays to be more maneuverable to eliminate the need for trimming. That's the main reason why landscape managers are seeing more zero-turning radius mowers on the market.

Dixon, pioneer in the zero-turning radius field with its ZTR model, has lately been seeing more and more competition in this market.

President Bob Foutch of Pro Star, which entered the zero-turning market in 1988, sees a big future. "Zero-turning radius mowers are the coming thing," he says. "They can do so many more things. And as we go along, I'm sure we'll continue to make improvements."

Joe McDonald, marketing coordinator for John Deere's commercial division, disagrees with the current zero-turning mindset. "We've looked at zero-turning radius mowers, but don't think the benefit is there," McDonald says. "They aren't as operator-friendly or safe. The major point to consider with a front mower is its ability to trim. Zero-turning mowers are fine if you're in the middle of a field."

It seems, too, that landscape managers are demanding more versatility from their mowers. Available attach-
For the long run.

Introducing a powerful new force in riding rotary mowers.

Now there's the new diesel-powered model Cushman 807.

Its totally integrated power train and new hydraulically-powered steering gives you unmatched performance over the long run. The 807 dispatches thick, wet grass on tricky maneuvers around obstacles without losing ground speed. No other rotary mower gives you a cleaner cut.

At the heart of the new, four-wheel 807 is a powerful 21.5 horsepower, 3-cylinder Kubota 950 diesel engine. We've also included a heavy-duty Donaldson air cleaner and a new, heavy-duty Cushman PTO clutch to keep your new Cushman Front Line running longer. A complete family of Cushman Front Lines and a wide range of accessories are available to meet all your needs all year 'round.

Choose a 3 or 4 wheel design with 60- or 72-inch side or rear discharge mower deck. Or add the exclusive Cushman Grass Caddy® system, which lets you cut, catch, and hydraulically dump 16 bushels of clippings without leaving the seat.

For a convincing demonstration contact your Cushman dealer today. Or call toll-free: 1-800-228-4444.

Exmark's 3150 comes with a 54-inch deck.

Attachments are playing a larger role in buying decisions. Cushman, for example, has a new Core Destroyer attachment for its Front Line series. Kubota and Wheel Horse have added sweeper and snowblower attachments.

From the landscape manager's point of view, no matter what kind of equipment "Iron Country" (LM first coined the term, meaning equipment manufacturers, in 1984) turns out, there are other considerations in buying.

For instance, Russell Studebaker, new president of the Professional Grounds Management Society, says many landscapers consider their equipment budget, existing inventory and labor budget before buying. Studebaker, senior horticulturist for the City of Tulsa, Okla., integrates herbicides for trimming with his string trimmers and his Toro Greensmaster mowers.

"Once we find something we like, we like to stick with it because of parts inventory," Studebaker tells LANDSCAPE MANAGEMENT. "We want something that's well-built."

Engines make a big difference to Peter Scholz of Vidosh Brothers, Sterling Hts., Mich. "I prefer diesels. They're more durable. Our entire fleet is Ransomes diesels. We have some diesels mowers with 1000 hours of use and we haven't touched (repaired) them."

He says his Ransomes mowers are also maneuverable and easy to operate. "They are able to do the big jogs and at the same time get into the small areas," Scholz notes.

Mark Yahn of Ground Control Landscaping, Orlando, Fla., also pre-
Another banner year for Betasan.

Once again, most of the country's top courses chose BETASAN.

Perhaps that's because top superintendents know that BETASAN® herbicide is more effective, safer and longer lasting than all other crabgrass controls, including Dacthal* and Team**.

Or, maybe the reason is Betasan is the only preemergent crabgrass control that’s safe for bentgrass and all other turfgrasses, including established bluegrass, fescue, perennial, annual rye, bermudagrass, Zoysia, bahia, centipede and St. Augustine.

Either way, for over 20 years Betasan has been earning the trust of the most demanding and knowledgeable golf course superintendents in the country.

Isn't it time you experienced the same confidence?

BETASAN is available in liquid formulation, as well as granular, to match any application need you may have.

For more information contact your local supplier, or call ICI Americas at 1-800-759-2500.

Gas or diesel engines are available for Kubota’s G series. Yahn also looks at caster wheel assemblies: “We always order our equipment with the heaviest type caster wheels they make, along with any optional items, like anti-scalp rollers, to get the deck to float in as many directions as possible to prevent scalping, but also to get the floating effect.”

In overall construction, Ground Control likes a liquid, differential-type axle. “The Ransomes and Hustlers all have shaft drives; universal joints, shafts going down to the axle driving the wheel,” notes Yahn.

Finally, comfort is very important. “Those guys sit on those machines for 45 to 60 hours each week,” Yahn says. “If the machine isn’t comfortable, you’ll go through people left and right.”

LM
Sabre *Poa trivialis* isn't just a good shade grass.
It's the best.

Years ago fine fescue was considered the best performer in damp shade. That changed with the appearance of *Poa annua*-free Sabre *Poa trivialis* and a 1979 shade tolerance trial at Ohio State University. In that test Sabre was top-rated for shade tolerance when compared to 39 mixtures, blends and monostands of fine fescue, ryegrass, Kentucky bluegrass and tall fescue.

An excerpt from trial data said: "Sabre, which had the highest overall seasonal ratings, maintained the most consistent quality throughout the season."

Due to its special qualities Sabre should be sown only in damp shade. For this purpose it may be mixed with fine fescue, turf-type ryegrass or Kentucky bluegrass.

Normal cutting height is 1-1/2 inches, but on winter putting greens in the Southern U.S., it has proven its ability to thrive when cut at 3/16th.

One of the first domestic varieties to be registered with the U.S. Plant Variety Protection Office, Sabre is both disease-resistant and hardy.
What Fun Is Settling If You Can’t Raise

Imagine an out front rotary mower that is so productive that customers ask you not to change a thing. That’s exactly the case with the Groundsmaster® 300 Series from Toro. For 16 years they’ve been the industry standard because of their unmatched power, productivity and maneuverability.

So instead of changing a good thing, we’re simply giving you more of it by adding some new features.

Toro’s Triflex® 88” cutting deck can increase your cutting productivity approximately 22%. And it’s retrofittable to other Groundsmaster 300 Series units.

The Triflex lets you choose an 88”, 72” or 54” width of cut without stopping. So for large acreage mowing with or without obstacles, the Triflex deck gives you added flexibility in addition to expanded cutting capacity.

For better maneuverability and less driver fatigue, we’ve added power steering. Combined with a big, 15” steering wheel and a hydrostatic control pedal, the Groundsmaster 300 Series is as easy to drive as a car.
