How do you train applicators to spray...on target?

Keeping sprays on target requires a lot of knowledge and skill. That's why applicator training is vital. An unskilled applicator who sprays off target wastes time and increases fuel and material costs. Weather conditions or a poorly calibrated sprayer could result in environmentally unsound pesticide use.

This year, improve accuracy of pesticide application by learning how to spray trees the right way.

The National Arborist Association (NAA) has available three educational videotape programs on pesticide application and sprayer calibration.

Each program is designed to increase applicator knowledge of spraying and spraying techniques. No other training program on tree spraying is currently available. Program videotapes cover Sprayer Operation, Sprayer Calibration and Application Techniques. A calibration manual is included with each order.

Videotape programs provide the beginning applicator with a basic understanding of spraying trees. They also help the more experienced operator solve mechanical and spray problems that regularly occur on the job.

The On Target series is available only as a set of three videotapes. It is made possible by voluntary contributions of NAA active and associate members. Cost for the set and calibration manual is $300.00. Because of their prior contributions, NAA members may purchase the set for $150.00.

Order your videotapes today. Start training applicators the right way. Let us spray...on target.
