**Excellent Dark Color:** When compared to other tall fescues, Rebel Jr provides the deep, dark color preferred by turf professionals.

The darker color of Rebel Jr is apparent in these test plots comparing Rebel Jr to other tall fescues.

**Improved Drought Tolerance:** A deep, extensive root system allows Rebel Jr to display excellent drought tolerance.

**Less Clippings:** The lower, slower growth rate of Rebel Jr results in easier mowing and 30% less clippings. However, it is proven to have an advantage over the current, much-talked-about "extreme dwarfs", as Rebel Jr does not grow so slowly that the plant's rate of establishment, vigor, tolerance to traffic and stress, or recuperative qualities are affected. The moderately slow growth rate of Rebel Jr is a distinct advantage over that of the extreme dwarf varieties.

**Rate of Establishment:** While Rebel Jr displays moderately slow growth, its rate of establishment is faster than the extreme dwarf varieties such as Bonsai.

**Top Performance with Less Maintenance:** Rebel Jr from seed or sod is adaptable to full sun or moderate shade. It needs only low to medium maintenance and uses 25% less fertilizer than Kentucky bluegrass.

The dense, slower growth of Rebel Jr can be seen one week after mowing.

Rebel Jr will give excellent performance in sun or shade. It's ideal for use in hard-to-maintain areas such as golf course green banks, slopes and bunker faces.
