West coast nurseries survey storm damage
by LESLEE JAQUETTE

California nurseries, some of whom supply landscape companies across the U.S., have delayed harvesting deciduous and orchard trees due to heavy rains in late December.

"Not only have rains prevented digging of bareroot trees in the state," says Ross Hutchings, executive administration director of the California Association of Nurserymen, headquartered in Sacramento, "but in some cases rains have forced nurseries to wash off roots and re-spray."

During the same cluster of storms, Washington and Oregon nurseries were spared for the most part, says Jeff McLvor, director of marketing and communications for the Oregon Association of Nurserymen.

During the second week of January, nurseries that use container-bound plants were not showing major losses, but Hutchings reports that some grow-in-the-ground nurseries have harvested as little as 10 percent of their bareroot crop, when normally 80 to 100 percent would be dug and shipped by early January.

Hutchings reports that Sierra Gold Nursery in Yuba suffered much damage when the staff was forced to evacuate the premises with only 10 percent of its deciduous crops harvested.

A majority of the crop at the Dave Wilson Nursery in Hickman and Reedley, Calif., was pulled out of 'heeling-in,' which means the trees must be pulled out, washed and re-sprayed at considerable added expense.

Soggy profits

Hutchings could not comment on how the weather damage will affect prices of nursery stock. He did suggest, however, that it will be hard for some individual nurseries to show a profit.

"On the upside, in a few years, we may see people re-landscaping in response to the storms."

Despite strong winds in excess of 60 mph, Southern California's Monrovia Nursery Co.—one of the largest nurseries in the U.S.—has survived with only minimal damage.

General Manager Jim Poorbaugh notes only minor problems caused by the relatively warm weather. He credited the company's experience in handling bad weather.

Poorbaugh says four of 12 hoop houses and a polypropylene shade were torn from their bases. Although these will have to be replaced, the plants are fine, with no cold or sun damage. In addition, there were no water problems due to plentiful rainfall prior to the winds.

"The winds inconvenienced us because lack of electricity in the office reduced productivity," says Poorbaugh.

"It's an irritation to clean up, but the quality of the plants didn't suffer." □

Feds satisfied: BF/TV-CL deal moving forward

The acquisition of Barefoot, Inc. by ChemLawn parent company ServiceMaster is a step closer to completion, now that the mandatory waiting period has expired.

The Federal Trade Commission and Department of Justice have not requested further information, thus satisfying the government-imposed requirements needed to close the transaction.

As of January 10, ServiceMaster needed to register its shares with the Securities and Exchange Commission. The tender offer will begin upon fulfillment of this requirement. Closing of the transaction is contingent upon participation in the tender offer by the holders of at least 75 percent of Barefoot's 14.5 million outstanding shares.

Barefoot is the nation's second largest lawn care company, with more than 500,000 system-wide customers, spanning 103 metropolitan markets, with 53 company owned markets, 50 franchises, and annualized customer level revenues in excess of $125 million.

TruGreen-ChemLawn is the nation's largest lawn care company, with customer level revenues of more than $630 million, serving 2.5 million customers through more than 260 service centers across the country.

ServiceMaster reports it has more than 6 million customers in the U.S. that use its various service companies, including Terminix, Merry Maids and American Home Shield. □
People love

If you think Dodge Ram looks impressive, just wait till you see how it works.

Because Ram comes to the job site with the most available payload of any pickup and a bed that's designed for two-tier loading. Convenient cargo tie-downs come standard. And using bulkhead dividers, you can even separate a load into three compartments. Inside the roomiest regular and extended cabs of any full-size pickup, you'll find a standard driver's airbag. And terrific options like reclining seatbacks, an ingenious behind-the-seat storage system, and a center console that can double as an office...with room for a laptop computer, cellular phone and more.

Dodge's greatest strength, though, is a choice of Magnum® engines—overall the most powerful line of pickup engines on the planet. And Ram gives you a choice of two V-8s. An awesome 300-horsepower V-10. And a mighty Cummins Turbo Diesel which, at 440 pounds/feet,
delivers more standard torque than any other diesel you can get.

It's no wonder Dodge Ram has better resale value than Ford, Chevy or GMC.† There's just so much more to love.

For still more information, call 1-800-WORK RAM or visit our Web site at http://www.4adodge.com

Always wear your seat belt for a fully effective airbag.

†We calculated resale using avg. trade-in values for '94-'95 full-size models vs. MSRP's, published in Jan.'95-July '96 N.A.D.A. Official Used Car Guide® monthly editions.

America's Truck Stop The New Dodge
Asian group a good work force
I enjoyed your article on Hispanic laborers in the Oct. 1996 Landscape Management. I am a retired priest of 8 years and play golf about twice a week. I have worked as a priest with 5000 migrant workers in the 60s and 70s for 15 years. They were mostly asparagus, onion, potatoes, sugar beet workers. At the time I worked with them many got beyond the third grade. Many could not read or write. Television allowed many older people to learn English, mostly watching soap operas on rainy days.

They were a poor, but happy people. Not many of the luxuries of our affluent society, just enough to stay alive and move from state to state to harvest a crop for us who were more affluent. I never met a lazy migrant worker in 15 years.

I might mention there are 19,000 Hmong people now living in the Twin Cities. They, too, are people of the land, now in the flow of city life. They, too, are good workers, never lazy, but farm oriented. No doubt they too could fit into the green environment program.

Fr. John F. Cody, St. Paul, Minn.

Wages must increase!
All I've read about this past year in all my trade magazines is about Mexican labor this and that.

If you are American born and bred, you know the hard facts of life in America:

Fact #1: You cannot support yourself, apartment, car, gas, insurance, food, phone, utilities and clothes (not including health insurance, girlfriend, a family or maybe even a life) working for $5-$6-$7 dollars an hour. You have a calculator, do the math.

There are plenty of American men and women that love to work outdoors and would love to work in all areas of the green industry. What stops them? Fact #1! Americans are a lot of things, but we're not that stupid.

There are a lot of companies who hire and train competent
American people and actually pay them a decent wage for their efforts. They understand if you want to live and stay in America you have to earn a certain amount of money.

Corporate America has been using cheaper labor for years, laying off Americans and moving operations to some sweat shop in Asia. Corporate America never once said "We cannot fill these positions." They readily admit they can make more money and compete in our markets by moving and hiring foreigners.

More money; more company profits are the only reason for hiring cheaper labor. Stop blaming hard working Americans who care about themselves and their future. Shut up and bite the bullet.

Change will only start with you and me. Remember your American parents. Just because all your friends are jumping off the bridge, will you?

Jerome A. Lesak, J.L. Land Development, Kirtland, Ohio

Web site request
I would like to see a question and answer "Bulletin Board" section where people can tell their story or talk about certain green industry subjects. You could also include a monthly test where one could answer questions related to green industry topics. It would be a good way for you to get a handle on what users know and don't know. I am generally satisfied with what I find on other green industry web sites, however, it is difficult to search for specific things. By the time I find something I'm interested in, I have spent too much time looking. Some links in your web site to other web sites would be great.

Blake Moore, Utah

Omission noted
The December disease control article only listed Daconil (chlorothalonil) as the product to use for various turf and ornamental disease control problems. Echo chlorothalonil fungicides—which compete directly with Daconil—were not mentioned. I ask that you add a supplemental note or article in your future editions recognizing our Echo products.

A.C. Assad, business manager, Sostram Corporation.

(LM regrets any inconvenience caused by the omission. Look for a thorough disease control article in May, ed.)

Stress. And the worst kind of summer conditions you'll find around the world. So it keeps bouncing back, lawns, golf course fairways, tees, roughs - any place where you need a great comeback.

It just keeps bouncing back.

LANDSCAPE MANAGEMENT  February 1997  15
They're hot, they’re here!

Exciting new product releases promise to help make turf and landscape management more efficient and productive.

by GARY BURCHFIELD

Most of you will feel the budget squeeze again in 1997. That’s why you’re always looking for ways to handle tasks faster, easier, more economically and still please homeowners, commercial clients and golfers.

Check out these products before the season really gets underway. You may find something among these new offerings that’s going to make a big difference in your operation for 1997.

Insect control advances

Mach 2 will make grub and caterpillar control easier. It’s a product of RohMid LLC, a marketing company formed by American Cyanamid and Rohm and Haas. Dr. John Thomas, Mach 2 marketing manager, says the new product has three major advantages:

- preventive as well as curative effect on susceptible pests. Existing products typically do one or the other, but not both;
- control of two major insect classes, the coleopterins (grubs and chafer) and the lepidopterins (sod webworms, cutworms, armyworms);
- outstanding environmental and health safety profile. The EPA is reviewing Mach 2 under the “reduced risk” fast track process.

Mach 2 will be available in liquid formulation this season, granules and Mach 2-fertilizer combinations in 1998.

DowElanco’s Conserve SC (suspension concentrate) is also on the EPA’s “reduced risk” fast track and is expected to be labeled for the turf and ornamental market by the third quarter of 1997.

Mark Urbanowski, new product marketing manager, says Conserve SC tests, under its Experimental Use Permit label in 1996, led to “very positive feedback” from users.

Primary markets for Conserve, Urbanowski says, are golf courses for control of cutworms and armyworms, and the lawn care industry for control of sod webworms and armyworms. It will also be used to control up to a dozen different pests on ornamentals.

Conserve SC is in a new chemical class called “spinosyns” which kill insects through ingestion or on contact. It has the properties of a biological control product, with the efficacy of a synthetic.

Low use rate, wide control

Golf course superintendents and sod growers will welcome a new fungicide, Heritage, about to be released by Zeneca Professional Products.

The active ingredient in Heritage is azoxystrobin, a compound patterned after a natural fungicide discovered in mushrooms in Europe.
The all-new power forwards.

We're proud to announce powerful new additions to our line-up. Our F-60 Series front mowers with features and pricing that are going to score a lot of points.

These 4WD mowers include many technological breakthroughs for increased turf performance. The Auto Assist 4WD with Dual-Acting-Overrunning clutch system delivers turf saving traction. It automatically transfers power to all 4 wheels when you need it. So, when the going gets tough, you get traction and reduced turf damage instead of wheel spinning. Or, you can choose to engage 4WD on-the-go.

A durable, independent hydraulic PTO clutch makes it possible to engage and disengage PTO driven implements on the move.

Kubota's E-TVCS diesel engines deliver maximum power while minimizing vibration and noise. And, enhanced combustion efficiency reduces fuel cost and lowers emissions.

The F-60 Series includes 22, 25 and 30 horsepower 4-wheel drive mowers as well as a 25 horsepower 2-wheel drive model.

If you're looking for the ideal combination of comfort, power and efficiency for your team, you've just found a winning line-up.

Visibility and maneuverability will increase your productivity.

1-888-458-2682 ext. 403

Financing available through Kubota Credit Corporation

Available with 60" or 72" side discharge mower or 60" rear discharge mower.
Manage provides 'one dose' nutseed control, says Monsanto.

Zeneca's Dr. Dave Ross says Heritage:

- provides broad spectrum control of brown patch, Pythium, anthracnose, take-all patch, summer patch and snow mold;
- has an extended use interval of 14-28 days;
- has a low use rate: 2- to 4-ounces of product per 1000 sq.ft.;
- will gain EPA registration under "reduced risk" status.

Spray drift reducer

Rogers Innovative, Saskatchewan, is expanding marketing efforts for its Windfoil front-mount sprayers. The Windfoil unit replaces the mower deck with a spray tank and boom unit which covers 5-foot spray swath or up to 12-ft. 6-in. swath with the wing model. Rogers Innovative also offers a 15-ft. spray boom unit for use on golf courses, as well as hose-fed walking booms in widths from 30- to 80-inches.

Bio control via irrigation

Eco Soil Systems of San Diego, Calif., developed an on-site "fermentation vessel" and piping to inject control bacteria into the golf course irrigation system. Superintendents lease the system from the company, which services the tank monthly to re-inoculate the system with fresh bacteria cultures and replenish the media.

Doyle says the company has licensed a special strain of bacteria—Pseudomonas aureofaciens—from Michigan State, which is showing good control of Pythium, summer patch, dollar spot and anthracnose. Other bacteria cultures are available for combating nematodes and other turf disease problems.

Weed and feed

Commercial turf managers who like the action of DowElanco’s Confront broadleaf weed control, but prefer granular application, can opt for O.M. Scott’s 30-5-5 Fertilizer Plus Confront. Confront has proven effective against the common broadleaves, plus giving good control of clover, oxalis and spurge. The Scotts formulation is the only one which offers Confront in granular form.

Scotts is introducing two additional granular fertilizer/herbicide combinations. One will be a 14-0-14 formulation, the other 0-0-15, both with Monsanto’s Dimension pre-emergence herbicide for crabgrass, goosegrass, foxtail and barnyardgrass control.

DowElanco’s Team Pro—an improvement over the company’s Team product—is used to manage broadleaf weeds, such as spurge and oxalis in warm- or cool season turf.

Monsanto’s Manage, for yellow and purple nutseed is available this year in “one dose” water soluble packets. Manage can be used on any turfgrass, including sod or seeded areas once they are well established.

Riverdale Chemical Company has readied two broadleaf herbicides—Cool Power and Horsepower. By combining the DowElanco active triclopyr with a phenoxy herbicide and dicamba, the strengths of three different chemistries are used to control broadleaf weeds.

Cool Power and Horsepower combine MCPA, tri-

and durability

the tolerance
to drought & disease

the quality!

Look for the grown in Oregon label. It puts all others in a lower class. A lush, healthy, deep green turf is your reward for selecting superior seed. The world’s leading turf grass breeders have been perfecting it for more than 20 years. The tough, vibrant turf will not only tolerate drought, but survive cold winters.

When you select Turf Type Tall Fescue seed from Oregon you can be sure you will enjoy your “good judgment” decision year after year.
clopyr and dicamba for improved performance on hard-to-control weeds such as clovers, spurge, oxalis, wild geranium and wild violet.

Cool Power is an ester formulation, designed for greater efficacy in cool weather. The amine Horsepower can be used in warmer temperatures.

**Turf 'booster'**

Turf managers this year have a new "biostimulant" product to boost grass performance. The product, BioEdge WSP is marketed by Terra Industries in water soluble packets for easy tank mixing with other fertilizer and/or pesticides.

Bob Yarborough, Terra's northern division professional products manager, says BioEdge enhances soil microbial activity, promotes increased root growth and includes nitrogen-fixing and phosphorus-solubilizing bacteria that enable plants to better utilize nutrients.

"It's a proven combination of humic acids, cold water kelp, natural sugars and amino acids, along with beneficial bacteria," Yarborough says.

BioEdge is available in two formulations: BioEdge WSP 0-0-12 and BioEdge WSP (Fe) 0-0-3, with 10 percent chelated iron. "The initial market has been golf courses, but we expect more professionals to use it on other turf areas this year," says Yarborough.

Terra also introduces a golf course mapping program to help superintendents make more precise fertilizer and pesticide applications. It’s known as Precision in Turf.

**Save time, costs**

Ciba’s Primo continues to gain popularity with turfgrass managers. Dr. Joe DiPaolo, Ciba Turf & Ornamental Products, says Primo reduces mowing time by slowing grass growth, but it’s also an excellent product for improving overseeding and sod establishment.

"Applying Primo one to five days before overseeding slows turf growth, giving the new seed a better chance to germinate and get established. We’ve seen increased ‘seed catch’ of 50 percent to 100 percent. Likewise, putting it on sod two weeks before harvest slows top growth, promotes tillering and enhances color and density,” says DiPaolo.

**Roadsides an easy mow**

The Polecat, from TK Industries in Laramie, Wy., is the brainchild of Bob Kenison, a former mining engineer. It mows around poles and on both sides of guard rails, fences, barriers or mail boxes.

Units are in use in California (where roadside herbicides are banned) and around Denver’s new airport.

Looking for a versatile digging machine in 1997? Consider the The Dingo Digging System, “a hydraulic power plant on wheels,” with more than 30 attachments to choose from. Dingo reports that most attachments can be changed in less than a minute by one person. Dingo is headquartered in Fort Mill, S.C.
