New HERITAGE™ Fungicide. Changing the Course of Disease Control.

Now, golf course superintendents can change the course of turfgrass disease control with HERITAGE, a completely new fungicide with a novel mode of action. HERITAGE will give your golf course round-the-clock protection against devastating diseases. With its powerful combination of preventative and curative activity and its high level of effectiveness against 18 of the toughest turf diseases, HERITAGE will make an outstanding difference in the quality and health of your turfgrass.

The active ingredient in HERITAGE is based on naturally occurring fungicides, called strobilurins, which are found in certain mushrooms.

HERITAGE has a novel mode of action which is different than any other fungicide now on the market. It has both preventative and curative activity and is absorbed into the leaf blades and stems as well as taken up by the roots. This ensures that your golf course is protected from the devastating effects of turfgrass diseases.

HERITAGE is the only fungicide available that controls both brown patch and Pythium, as well as take-all patch, summer patch, anthracnose and snow mold—an unprecedented advantage for the turf professional's disease program. HERITAGE is also effective against certain fungicide-resistant pathogens, making it an extremely useful tool in resistance management strategies.
Superintendents will find that HERITAGE is exceptionally compatible with the environmental balance of their courses. HERITAGE poses minimal risk to birds, mammals and fish, and its low use rates and extended application intervals mean less active ingredient is released into the surroundings.

For more information on HERITAGE Fungicide and how it's changing the course of disease control, contact your Zeneca Sales Representative or call Zeneca Professional Products Toll Free at 1-888-617-7690.

Once you learn about the powerful, round-the-clock protection this new fungicide offers, you'll agree that it's time to change the course of your turfgrass disease management program, with HERITAGE.
People of the Year

17 'PEOPLE OF THE YEAR'
Our choices for 1997: Tom Lied; Jeff Bourne; Paul R. Latshaw; and Dr. Roger Funk. Each has a long history of contributions to the Green Industry. They’ve given their time, talent and leadership.
RON HALL/TERRY MCIVER

23 LM REPORTS: GROUND CLEARING EQUIPMENT
These equipment 'linemen' are brought in to get the ground ready for the 'pretty boys.' Use them for the big clearing/leveling jobs.
CURT HARLER

25 BEYOND THE NUTS & BOLTS OF EQUIPMENT MAINTENANCE
Modern equipment maintenance means you watch for use patterns, trust mechanic intuition and have an inventory system that works.
LUKE FRANK/PETE FERNALD

30 DORMANT PRUNING BENEFITS
Most professionals know winter is the time to prune trees, to reduce potential for injury. Here's a review.
When it comes to season-long control of crabgrass, goosegrass, oxalis, spurge and many other troublesome weeds, PENDULUM® herbicide gets down to business. No other preemergent turf herbicide can match its spectrum of weeds controlled and cost-effectiveness.

- PENDULUM brand Pendimethalin also offers greater flexibility than ever before, with a complete preemergent product line that includes sprayable formulations, combination fertilizer products and now a 2% granular formulation.
- When you consider cash rebates available to you from American Cyanamid, it's easy to see that PENDULUM really does mean business. Smart Business.
- To learn more about the rebate offer or for the name of the PENDULUM distributor nearest you, call 1-800-545-9525, Ext. 931.
This month, we present to the Green Industry our “People of the Year” recipients for 1997.

What an excellent quartet of Green Industry leaders: Tom Lied; Jeff Bourne; Dr. Roger Funk; and Paul Latshaw, Sr.

The criteria for the “People of the Year” award is that a Green Industry professional exhibits a history of contributions to the Green Industry during the course of a career or during a significant portion of that career.

Our winners have done just that, and show no sign of slowing down. They’re long-ball hitters. Team players. Coaches. Managers.

Tom Lied, president of Lied’s Landscape Design and Development, has been a regular contributor to the Associated Landscape Contractors of America, including being a co-founder of the group in 1962. He learned the business from his father, Delmar, and is one of those people who never looked back. He knew his career path and interests, and attacked his work with excitement and vigor.

Jeff Bourne, our grounds management winner, is in charge of about 6000 acres of property and 3000 parcels of dedicated open space in Howard County, Md. He is responsible for an operating budget of $13 million, including 600 employees (career, part time and contractual).

Paul Latshaw—his son is also Paul—could be called a “Tournament Specialist” in the superintendent ranks. Throughout his career, he has prepared several country clubs for championship play, with great results. His most recent was the U.S. Open Championship at Congressional CC, where he has been superintendent since 1993.

Dr. Roger Funk of the Davey Tree Expert Co., has been a leader in horticultural science and plant health care for Davey since 1973.

He has authored numerous papers on horticultural topics, and has brought some very good ideas to the table in the interest of reduced product use and “plant health care.”

Besides a definite tendency towards excellence, our “People of the Year” share something else in common. Each one entered the Green Industry at a very early age, and knew early on that this was where they wanted to be; where they wanted to make their marks; where they wanted to make a difference.

Lied started in his father Delmar’s nursery company as a young boy. After earning a degree in horticulture, Lied went back to serve the company, and began his career full throttle. He was also a co-founder of ALCA.

Latshaw was fresh out of the Navy, and had turned from a potential occupation of poultry farmer when in 1962 he started at a Pennsylvania golf course.

Bourne’s involvement with grounds began as a student of Community and Outdoor Recreation at Springfield College, Springfield, Mass.

Roger Funk joined the Davey Tree Expert Co. in 1973 as a horticulturist. He’s been there ever since, and has been the technical force behind it’s initiatives into the concept of Plant Health Care and other lawn care/tree care-related programs.

We congratulate our “People of the Year” for 1997. We know we could find four times that number on any given day, because there are many committed Green Industry Professionals out there who have made life-long contributions.

The “People of the Year” will receive their awards during the Green Industry Expo in November and GCSAA show in February. To learn more about them, see the story that begins on page 17. LM
"It takes more than good products to get my job done right."

I don't need someone who's going to sell me a product and walk away. What I need is someone with the energy, know-how and resources to actually help me get the most out of the products I buy. Someone that will work with me to figure out what needs to be done — and the best way to do it. For me, that's Terra. They've got the products I need, when I need them. Turf seed. Fertilizers. Pesticides. All of the major brands, including their own line of Terra Professional Products. And I can count on them for the kind of product information, agronomic advice and technical support that I can really use. Terra makes my job easier — my life simpler. One call is all it takes. I know I'll have the product I want and the answer I need."

Working with you.

It's called taking the best crabgrass herbicide anywhere and tweaking the formulation until it works even better. New Team Pro herbicide is more consistent on everything from crabgrass to spurge and oxalis. The only crabgrass preventer with a unique blend of two active ingredients covers great at 4 lbs. per 1,000 sq. ft. But it still won't stain your customers' property and is safe to nearby ornamentals. Always read and follow label directions. For more information, call us toll-free at 1-800-352-6776.
This new single-source reference provides the most current and comprehensive information on the basics of turfgrass and landscape management available today.

The Landscape Management Handbook

edited by
William E. Knoop

125 pages, softcover
Item #LSMB830
$34.95

Provides an overall understanding of turf and landscape care and management and covers all the basics of the green industry.

Covers all the topics both golf course superintendents and students of turfgrass and landscape management need to know about.

Combines practical information with the tried and true basics of management to provide a single, practical, affordable and up-to-date text.

Features detailed information, charts, diagrams, figures and tables to illustrate key information points.

The Landscape Management Handbook provides a unique, single-source reference of comprehensive information on a variety of turf and landscape topics. It's an ideal handbook for golf course and lawn care superintendents and crew members, and is also appropriate for schools that teach basic turf and landscape management.

The Professional Lawn Care Association of America is in the business of "Growing Leaders." Growing your career, your company and your industry, that’s our mission. From all parts of the United States, Canada and around the world, PLCAA members are dedicated lawn and landscape professionals, grounds managers, industry suppliers, and students committed to professionalism and success.

Invest in your success, join PLCAA today! As a member, you can take advantage of:
- Year-Round Business, Legal and Technical Advice
- 1-800 Resource Hotline & Web Site
- Comprehensive Benefits Package Including Insurance & Retirement Planning
- Tools to Promote Your Role as an Environmental Steward
- Discounts on Educational Products, Conferences, & Workshops
- Discounts on a University-Directed Industry Certification Program
- Legislative Support and Updates on the Issues
- Subscriptions to Informative Publications
- Discounts on PLCAA Operating Efficiency Study
- Public Awareness Campaigns to Spread the Good Word About Turf
- Discounts on Green Industry Expo Booth Space for Suppliers
- Exclusive Use of the Symbol of Good Practice Logo

PLCAA helps our company and it keeps our company sharp, which translates into efficiency. The many benefits we receive directly down to the bottom line. We belong to many associations, and PLCAA is truly the leader in understanding and serving its members.

Introducing A New Kind of Savings Plan: Jiffy-Pots® from Jiffy Products

Plant pot-and-all!
Jiffy-Pots are 100% biodegradable - roots grow right through the pot wall!

All natural Jiffy-Pots from Jiffy Products increase efficiency, eliminate waste and add favorably to your bottom line. Available in a full range of sizes to meet any planting need.

Call 1-800-323-1047 to start your new savings plan today!
**Va. buttonweed in bentgrass, fescue**

Virginia buttonweed has become established on bentgrass skirts and fescue fairways on our golf course. We applied Confront to areas around the green; it appeared to have killed the weed, but one year later we noticed it had returned. In addition, Confront killed the bentgrass. We have tried weeding, but with little effect. Nothing has been applied to fescue areas fearing that the applied product may kill the grass there also. And these areas have a great deal of Virginia buttonweed.

-KENTUCKY

The confront herbicide is labeled for use on both bentgrass and fescue. It is a postemergent herbicide. In my opinion, it helps manage the Virginia buttonweed present at the time of application. Recognize the fact that this is a difficult weed to manage. Often, repeat applications at two- to three-week intervals may be needed to help manage this weed.

You say that you noticed weeds a year later. It is possible that the new weeds might have appeared from seeds which can remain viable for 10-15 years in the soil. New seeds can also be introduced from adjacent areas.

Since Confront is labeled for bentgrass use at 1 pt./acre, it is unlikely that is caused this problem at the recommended rate. However, if it was not used according to label guidelines, problems may occur.

Check your records for mixing and gallonage application rates. The bentgrass kill you mentioned also could be related to a disease like Pythium blight or some insect damage.

As far as fescue, you may be referring to coarse fescue or tall fescue. Confront is also labeled for use on fescue. There should not be any problem if it is used according to label guidelines.

**Tall fescue clumps a problem**

How late can we apply Lesco-TFC to manage tall fescue as a weed in Kentucky bluegrass lawns?  

-PENNSYLVANIA

A Lesco representative says Lesco-TFC herbicide can be applied as long as the soil is not frozen. After treatments are applied, tall fescue plants may not show severe declining symptoms or die during the fall season of the treated year. Instead, the tall fescue plants usually disappear the following spring. Reports indicate that fall applications are better than spring because during the fall season root absorption increases.

Also, tall fescue would be more susceptible to TFC herbicide because of decreasing temperature.

Treating tall fescue in the fall can allow Kentucky bluegrass and other desirable turfgrasses to fill in during spring.

Avoid treating areas that have ryegrass as a component of turfgrass in the lawn. Lesco-TFC herbicide will remove perennial ryegrass from Kentucky bluegrass.

Another option for the tall fescue clumps is to dig them out. These areas can then be seeded with certified seed mixes. Where this is not practical and chemical approach is highly desirable.

Read and follow label specifications for better results.

**Tree soil compaction**

Older trees on the town commons are suffering from years of soil compaction. What can we do?  

-OHIO

There are only a few things that can be done to relieve compacted soils. Where practical, try to correct compaction with hydraulic pressure. Soil injecting, root feeding tools can be used. The key is to get the water pressure deep into the root zone to break up the compacted soil. In most situations, the active roots of plants will be in the top 18-24 inches.

Another approach is to drill vertical holes in the ground using a soil auger and filling them with loose amendments like mulch or peat moss. If poor drainage appears to be a problem, filling these holes with pea gravel would be useful. Reports also indicate that radial trenching within the dripline of trees and filling with amendments will allow good drainage and aeration for the root systems.

The best way is to recognize the potential for compaction from traffic or construction, and provide corrective measures and treatments before the anticipated compaction occurs. LM
