As a golf course professional, it’s your responsibility to make the right choices. Right for the turf, and for the people who enjoy it. One way to meet that responsibility is with Dimension® turf herbicide.

Dimension provides season-long control of crabgrass and over 20 other tough grasses and weeds, with excellent safety on established turf. And Dimension does it without staining, or harming adjacent ornamentals. That means no more weed “fringes,” because you can apply Dimension with confidence right up to the turf’s edge, even around walks, drives, and landscaping.

Dimension’s low use rates and favorable environmental profile mean less worry. The active ingredient features very low toxicity to mammals, birds, and insects. Plus it bonds to soil particles instead of leaching into groundwater.

Dimension offers the widest application window—6 weeks more than other preemergence products. That lets you delay application for optimum control of goosegrass and other weeds. And split applications can stretch control even further for areas with long growing seasons. It all adds up to a turf herbicide that only weeds find hard to live with.

Call 1-800-987-0467 or visit us at www.dimensionpro.com to learn more.
Bruce Williams, CGCS, superintendent at the Los Angeles Country Club, realizes that job security is one of the foremost concerns of most golf course superintendents.

He shared some of his observations on the subject on GCSAA's busy website this past spring, and because of the importance of the topic we asked him for additional comments. The following are some of them, edited for space.

Becoming a superintendent is the goal of many young people. Working conditions are attractive. It can pay well too, even for individuals possessing associate degrees or completing 12-short courses. A salary of $50,000-plus isn't unusual for a capable superintendent.

But there is competition for these jobs. And more is coming.

There may be as many as 2,000 students in turf programs in the United States. The law of supply and demand dictates that the more superintendents there are, the lesser the likelihood that greater demand and higher salaries will be out there. Many superintendents already feel the market is flooded.

Is it time to rethink the reason for giving out numerous scholarships each year to attract more people to become golf course superintendents?

Another issue is compensation.

A superintendent with a lot of experience at a club can make a pretty good salary. In fact, a superintendent could eventually command the largest salary at a club. While clearly a good thing, this could cause a problem. What seemed like a reasonable salary to one board may seem unreasonable to the next one. Boards and general managers, like superintendents, come and go.

Also, the further the superintendent gets away from the "honeymoon" phase with the club and its board, the greater the negative response can be to suggestions for improvements that, even though they're temporary, would close or tear up the course, or even restrict carts or play.

None of this is likely to change much soon. Most superintendents can't count on job security. That's why it's valuable for all of us superintendents to understand as much as we can about the life and career cycles of this demanding profession.

---

GCSAA members will decide three officer posts and elect three directors from a field of 10 candidates for the 1999 board of directors during the annual meeting, Feb. 13, 1999, during GCSAA's 70th International Golf Course Conference and Show in Orlando.

For President: David W. Fearis, CGCS, Blue Hills Country Club, Kansas City, MO.
For Vice President: R. Scott Woodhead, CGCS, Valley View Golf Club, Bozeman, MT.
For Secretary/Treasurer: Michael Wallace, CGCS, Hop Meadow Country Club, Simsbury, CT; and Tommy D. Witt, CGCS, StillWaters, Dadeville, AL.
For Directors: David S. Downing II, CGCS, Wild Wing Plantation, Conway, SC; Joseph H. Emanuel, CGCS, Hurstbourne Country Club, Louisville, KY; James J. Nicol, CGCS, Hazeltine National Golf Club, Chaska, MN; Timothy T. O'Neill, CGCS, Country Club in Darien, Darien, CT; Samuel R. Snyder VII, CGCS, Hercules Country Club, Wilmington, DE; and Mark Woodword, CGCS, Dobson Ranch and Riverview Golf Courses, Mesa, AZ.
Can Your Urea-Based N Sources Compare to Nitroform®?

There is a difference in nitrogen sources. Unlike the others, Nitroform® is released throughout the growing season by soil microorganisms. Nitroform® feeds organically. It supplies both carbon (energy) and nitrogen (food) for microbial absorption and utilization in the soil. The carbon in urea-based fertilizers is chemically converted to CO₂ and lost to the atmosphere...a waste of energy.

Increased microbial populations hasten the decomposition of organic residue. In turf, this reduces the potential for excessive thatch formation while accelerating the production of humus, nature’s ultimate and perfect growing medium. Nitroform® promotes vigorous rooting and development of root tissue. The effect is even more pronounced when Nitroform® is incorporated in seedbeds or sodbeds, in container soil mixes, or following core cultivation.

Because the N in Nitroform® is released by soil microbes, it is resistant to leaching and runoff...even in sandy soils under heavy rainfall and irrigation. What is your choice?

- Nitroform® Provides Season-long Feeding
- Nitroform® Enhances Microbial Activity
- Nitroform® Promotes Rooting and Root Formation
- Nitroform® Protects the Groundwater
Maintaining a shop and a course

By BRIDGET FALBO

For a golf course superintendent, the layout and design of the maintenance shop can be almost as important as the design of the course. Luckily for Mariana Butte Golf Course superintendent Ron Mielke, he was on board with the City of Loveland, Colorado, prior to course construction and helped with the design of the shop.

Mariana Butte is set in the foothills of the Colorado Rockies bordering the Big Thompson River and features a backdrop of the snow covered peaks of Rocky Mountain National Park. The public golf course opened in 1992, and made Golf Digest's list of 100 Great Value Golf Courses and also received the magazine's four-star rating.

Mielke had worked as superintendent for Loveland's Olde Course for eight years before moving to the site of the Mariana Butte course and supervising construction under the direction of architect Dick Phelps in late 1990.

Limited maintenance space

When it came time to plan the maintenance area, Mielke found they had limited space in which to build a maintenance shop (as happens with most golf courses). It also needed to be constructed in such a way as to be out of sight of the expensive homes that would encircle the course.

Landscape berms were constructed surrounding three sides of the shop, to act as a natural barrier to noise and unsightly equipment. The berms, however, turned into an attribute of the shop area rather than just taking up precious space. They were cut in half and backed by concrete storage bins, which Mielke says have become very useful in storing sand, gravel, top dressing and even equipment.

"You can't see it from the road and it's contained here within the walls," explains Mielke.

With his experience working on other golf courses, Mielke knew many details he wanted to incorporate into the shop design, such as an equipment hoist, meeting room and out-of-the-building pesticide storage. But he also gathered information from other superintendents whenever he had the chance. He's more than satisfied with the result, but says it's still a work in progress. The landscaping hasn't been completed yet, for instance.

The front end of the maintenance shop houses comfortable work spaces -- offices...
With Its Lower Price, Roundup Pro Herbicide Looks Better Than Ever.

And So Will You.

We've cut the price of Roundup Pro herbicide. So, you can affordably get more for the same money.

Now you can use Roundup Pro in many more ways and manage your course more efficiently. Use it for turf renovation, cleaner mulch beds and sand traps, tree rings, fencelines, and even brush control.

Use Roundup Pro at optimal labeled rates to tackle hard-to-handle weeds and brush. The optimal rate solution provides consistent control, with 1-2 hour rainfastness.*

Roundup Pro kills labeled weeds completely, eliminating regrowth. By getting effective vegetation control with just Roundup Pro, you can assign your staff to other course needs and get more work done. Now it could be more economical than ever to use Roundup Pro in a “See and Spray” program.

With the ease, economy, and efficiency of Roundup Pro, your golf course will always look better. For more information, see your retailer or call Monsanto at 1-800-332-3111.

Ron Mielke has been in the golf course business all his life, so he knew what he wanted when it came time to build a maintenance shop at the Mariana Butte Golf Course.

The 44-ft. by 48-ft. heated maintenance room provides the space required for the mechanic to keep the equipment in tip-top shape. One of the best features of the shop, according to Mielke, is the small enclosed room with its own exterior ventilation for the mechanic to use specifically for grinding. Closing the room off keeps the dust from getting into bearings and motors and alleviates the noise problem, says Mielke.

The state-of-the-art chemical storage area in a separate, all-metal enclosed building has an automatic containment feature below the floor in case of a pesticide leak. By housing the chemicals in a separate facility, in case of a fire, the safety of workers and firefighters is increased and it will keep the chemicals from contaminating a nearby lake.

**Water recycling**

In the blueprint stage, Mielke knew the course would eventually purchase a water recycling system for cleaning equipment, so the building was specifically designed to handle this type of system. A small room next to the equipment area houses the water recycling equipment, which was installed this past spring. Just outside, a covered wash bay with drainage was built where the equipment is cleaned, to keep rain water from entering the recycling system.

Last year Mielke and mechanic Dave Batt toured golf courses looking at their water recycling systems. What they found was that many people were dissatisfied with different parts of their systems. Mielke used that knowledge in deciding to buy a new system from Hydrodynamics, Inc., of Florida not yet used by other courses. (The water recycling system costs approximately $28,500, according to the manufacturer.) They installed the system in the spring of 1998.

"After a couple of months of trial and error, we've worked the bugs out of it," says Mielke. "It's working out very well."

The equipment cleaning process begins with using compressed air to blow the dry grass off the equipment; the clippings are then recycled into compost. The unit is brought into the wash bay and spray washed with a pressure washer. The water and debris fall into a sump, which is then pumped through a screened cart that separates out the grass clippings and other large debris. Next, the water is pumped through a series of four clarification tubes to remove very fine grains of sand and silt. Then it passes through an ozonation chamber which uses ultraviolet light to kill bacteria in the water. From there it returns to the cistern and recirculates. That makes up the primary loop.

In the secondary loop, the water is removed from the primary loop cistern, pumped through a series of cloth filters covered with diatomaceous earth and then through an activated charcoal filter to remove gasoline, pesticides and oils. Then it fills a water reservoir which feeds the pressure washer, and some water returns to the wash bay to be recycled again.

Mielke figures he saves up to 4,000 to 5,000 gallons of water a month. He believes it's just a matter of time before state and federal regulations require such recycling to avoid contaminated water runoff into lakes and streams near golf courses.

Proper irrigation is a key to maintaining this course. Mielke explains they are very conscientious about their water use and only water as much as the course needs to keep the turf in playing condition. Since irrigation is so important, Mielke and other employees will be able to access pump station information at home via computer link. This will enable staff to monitor pump station stats 24 hours a day.

**Course maintenance**

Because of the very low humidity, the course suffers from few disease problems. Mielke handles any disease with a curative approach rather than preventative, except in the case of snow mold. In the latter part of October, he applies Scotts Fungicide 9...
Addition of calcium to the soil by traditional means is not usually efficient or effective in treating the calcium deficiency of turfgrass. Once applied, the common forms of liming materials can rapidly change to compounds that are insoluble in water and not readily available to the plant. Continuous applications over long time periods are necessary to effect even modest improvements in calcium uptake.

Quelant-Ca is a newly available amino acid chelated calcium product that corrects calcium deficiencies in turfgrass upon application. Quelant-Ca provides readily available calcium chelated with amino acids so that it is easily absorbed by the leaves and/or the roots of the plant regardless of most soil and water conditions. The unique formulation of amino acids used for chelation was developed not only to facilitate absorption by the leaves and roots, but to increase mobility of the calcium within the plant as well.

Quelant-Ca is normally applied as a foliar spray and may also be applied through fertigation. Either way, it is tank-mix compatible with herbicides, soluble fertilizers, insecticides, fungicides and plant growth regulators. It will even help improve the efficiency of most of these treatments by increasing their absorption and translocation within the plant.

Best of all, Quelant-Ca is economical to use and it protects the environment.

Quelant-Ca — a true systemic. It’s new...it’s unique... and nothing else works quite like it!
because the grass is still actively growing. Then around Thanksgiving he applies Scotts FF2 to last through the winter. Last winter, Mielke said the course was only closed for three to four days because of snow, but some winters snow may cover the turf for over a month.

Since its beginning, the course has been popular for tournament play, especially for shotgun and scramble type tournaments. The course generally schedules 15 or more tournaments per month.

Mielke finds the toughest part of his job to be fitting in necessary maintenance activities, such as top dressing, so as not to interfere with tournament play. Since the entire course has to be ready by 7:30 a.m. for shotgun tournament play, the crew starts mowing at 5:30 a.m.

The crew mow the tees and fairways on the front nine on Monday, Wednesday and Friday, and the back nine Tuesday, Thursday and Saturday. They mow greens and set cups daily. They mow roughs after these are completed. Paul Mason, assistant superintendent at Mariana Butte, schedules the maintenance staff of 14 seasonal employees and five full-time employees.

As with most golf courses, finding good employees can prove difficult. The Loveland course is helped by the fact that nearby Fort Collins is home to Colorado State University, which has a course of study on turf management. Students studying in the program often find summer jobs with Mariana Butte. But having that employment pool nearby also comes at a price. "We lose half our crew when school starts," says Mason. "And sometimes we're still mowing greens as late as Thanksgiving."

As might be assumed because of its location in the foothills, some of the tees must be mowed with hand mowers because of the severe elevations, describes Mason. On the 16th hole, the tee has an almost vertical drop of 40 feet. Many of the slopes themselves are kept in native vegetation to alleviate extra maintenance and reduce irrigation needs.

Working with the steep elevations and tournament timing offer the biggest challenges to managing this course near the Rockies, but Mielke says meeting those challenges provides great satisfaction and every new problem that crops up just makes his day more interesting.

The Price Of Roundup Pro Herbicide Has Dropped!

We've cut the price of Roundup Pro herbicide. So, you can affordably get more for the same money.

Now you can use Roundup Pro in many more ways - think of all the services you can provide! Use it for turf renovation, cleaner mulch beds, tree rings, fencelines, and even backyard brush control.

Use Roundup Pro at optimal labeled rates to tackle hard-to-handle perennial weeds and brush. The optimal rate solution provides consistent control, with 1-2 hour rainfastness.*

You won't need repetitive mechanical methods with the effective control of Roundup Pro. That freedom lets you get much more done in a day or a week. Eliminating weeds for good also saves wear on your equipment.

Roundup Pro is the only herbicide you need, all season long! It kills labeled weeds down to their roots to eliminate regrowth, giving you effective control.

So take control!

Get the ease, economy, and efficiency of Roundup Pro. For more information, see your retailer or call Monsanto at 1-800-332-3111.

John is mad as hell and he called me up to tell me that he’s not going to take it any more.

John’s a landscape architect with a degree to prove it. He says he’s been in the landscape business for 23 years. For the most part, he’s been glad he chose this career. But lately something’s been bugging him, specifically the lack of a program to require "certified" landscapers on projects. Most of his aggravation concerns the activities of what he considers unethical landscapers on new commercial projects.

He tells me that he’ll start his own landscape association if he has to help solve this problem. It will focus on "certifying" qualified landscapers. That way, he says, he and other legitimate and like-minded landscapers can get the respect that they deserve. They’ll build an accreditation program as recognized and respected by the public as other professions and the skilled trades.

Hey, if a construction project requires plans drafted by a registered building architect and work provided by registered tradesmen, why not require a "certified" landscape contractor too?

John says that he’s belonged to several landscape associations and they’re fine for getting to know other good landscapers. But none of them really address the main problem which, he insists, is low-ball operators that move in, snatch up projects, and generally gum up the works for established firms.

The veteran landscaper, who works in the Memphis area, says it’s way too easy to get into the landscape business, and what state or local regulations there are, usually aren’t enforced.

John, I empathize with you. Really I do because I feel exactly the same way. But, you have to understand where I’m coming from.

When I look at the number of young people pouring out of our nation’s journalism schools, I wonder how anybody is ever going to make a living in journalism. There are too many of us reporters and editors in the marketplace already.

I sometimes think that if we could just reduce the supply of these ambitious, fresh-faced fledglings those of us already in the business could guarantee ourselves more job security and command better salaries.

Does the journalism industry need a certification program so that just accredited editors and reporters could work? No, I don’t think so.

John, you can certainly argue that there’s a big difference between being a low-ball landscaper and a journalist just breaking into the business; I’ll grant you that.

But, ultimately the success of any industry is not decided by who is excluded, but by embracing and improving the knowledge of those within it. And particularly those at the bottom; they need it the most.

Certification isn’t a gate to keep competitors out.

Again, I look at my own chosen profession.

I look at all of these young people, so eager to start their careers and make their marks, few of whom are qualified to be a journalist, not yet anyway... just as I wasn’t almost 30 years ago.

Families rely on you for lawn care expertise because they know you'll make the right choices. The very best for the turf, and for the people who enjoy it. One important way to keep that trust is with Dimension® turf herbicide.

That's because Dimension gives families a lawn they can love. It provides season-long control of crabgrass and over 20 other tough grasses and weeds. And it does it without staining, or harming adjacent ornamentals. That means no more weed "fringes," because you can apply Dimension with confidence right up to the lawn's edge, even around walks, drives, and landscaping.

Dimension's low use rates and favorable environmental profile mean less worry. In fact, when you apply Dimension-on-fertilizer formulations, families can re-enter and use the lawn as soon as the dust settles. That could even turn a skeptical neighbor into a future customer.

Dimension offers the widest application window – 6 weeks more than other preemergence products. And you'll save money because season-long control means fewer callbacks. Most important, your customers will stay customers, year after year after year...the kind of callback you can live with.

Call 1-800-987-0467 or visit us at www.dimensionpro.com to learn more.

ommercial landscape management in a true four-season climate is often restricted to operational functions and sales efforts traditionally associated with a growing season of approximately eight months. By October and November, many landscape contractors are "putting their accounts to bed." While preparing a landscape for its winter ordeal can require a significant effort, and it can also generate sales revenue beyond the typical seasonal maintenance contract.

This additional revenue can strengthen a contractor's position financially as the season closes, but I would like to suggest an alternative approach to landscape management operations in the second season. This is a practical approach to managing the winter season, as well as a different philosophical approach to serving the needs of our clientele. This approach continues to generate revenue for the landscape contractor throughout the winter (snow or no snow), while providing the property owner or manager with new tools for marketing the exterior of their property over all 12 months of the year. When planned for properly and executed professionally, these winter marketing efforts will result in a true win/win scenario for both contractor and client.

Investment from both sides

What we sell, and ultimately provide, is a means by which property owners and managers can differentiate themselves from their competition. This allows the investment made in any commercial property to be earning year-round dividends. Why then, because of the winter weather, should such efforts be shelved for four months out of every 12? We are asking our clients to allow the investment in their landscape to stop performing over that four-month period. Regardless of climate, today's leaders in the service industries are the ones who provide opportunities for their clients to market more aggressively when their competition is hibernating.

Here is an example: In July, you invested $100,000 in a 60-month bank certificate of deposit in an effort to generate regular income from the monthly interest on your balance. Five months into the first 12-month period, your banker calls to inform you that your account will not be earning interest for the months of December 1998 through March of 1999; and
the same will hold true for that four-month period in each of the next five years. Your reaction would be predictable. Few of us would allow our investment to stagnate for four months without generating any type of income. We may determine that such news from our banker or broker warrants a search for a new financial planner.

Similarly, if you allow your client's real estate investment to stagnate for four months out of every year, you are also allowing your investment into their landscape, in both time and money, to stagnate as well. You may also be unwittingly allowing that to happen if you do not have some type of winter marketing program set forth for their landscape. An oversight like this can foster an inaccurate perception of the value of a property's grounds, and may jeopardize your position with your client when such a perception is formed during what is traditionally considered your "off season."

Explain to your client that just as you would turn to an investment banker or other such financial expert to help you manage your money most effectively, teaming up with an experienced, proactive landscape contractor to evaluate and impact the condition of their landscape investment will assist them in promoting their landscape 12 months a year. If you are successful, the revenue generated from these operations will probably exceed your original expectations, and will most certainly come as a welcome supplement to the unpredictable revenues of snow removal services.

**Make a visible impact**

Certain established horticultural practices offer additional work and provide your client with a way to enhance and protect the winter landscape in very practical ways. Some of the more common practices are:

- Applying gypsum to turf bordering walks and curbs to minimize salt damage;
- Using antidesiccant sprays to protect plant surfaces from wind and salt vapor;
- Mowing late-fall turf to prevent fungus development;
- Wrapping shrubs to protect from winds and frost/thaw cycles;
- Using sound snow removal techniques to minimize damage from piled snow, plows, etc.;
- Having a plan for using ice melt compounds to avoid over-application in the throes of a winter storm.

**Promote your investment**

Once the preventative and practical operations of winter landscape marketing are in place, you can implement the aesthetic and artistic elements of winter marketing. Take advantage of winter's natural appeal with a focus on complementing the season's natural colors and textures. Combine preventive horticultural procedures with common decorative practices to highlight an otherwise stark winter scene:

- Cut pine boughs laid over bare flower beds, raised planters, etc., provide winter color, a pleasant scent and insulation from severe cold.
- Decorative mulches such as shredded hardwood, nut or seed shells or wood chips offer color and texture in highly visible areas.
- Cut limbs from plants with brightly colored bark (i.e. red and yellow twig dogwood), artistically arranged in planters and flower beds offer beautiful displays in an otherwise barren corner of the landscape.
- Plant bulbs in fall for spring flowers.

**Let your investment shine**

The hottest and most effective opportunity for showcasing the beauty of the winter landscape is by installing decorative lighting. This has evolved into much more than simply hanging lights in the trees during the holidays. The phenomenal resurgence of holiday decorating provides a way of drawing attention to a landscape or property, creating a marketing tool that is being used in many markets as a year-round promotion. The revenue generated by such operations will augment snow removal efforts, since the maintenance of the lighting can often be performed by the same individuals, often in the same visit to a property.

The key to a successfully installing decorative lighting lies in the planning and execution of a comprehensive approach, considering the impact both aesthetically and practically:

- Install the display according to a thorough plan for installation and maintenance, highlighting certain plants or areas of the landscape while protecting and minimizing plant or property damage.
- Start planning early to avoid the seasonal rush. Install early to accommodate the delicate nature of lighting materials and facilitate installation in warmer temperatures.
- Establish a budget and plan the display accordingly. A more concentrated use
of lighting in fewer areas or plants will have a greater impact than spreading out your light inventory over a broader area just to get the coverage. Provide your client the means to maximize the budget and still provide the greatest impact.  

- Review installation techniques with your client prior to installation to ensure that the final look and durability of the display meets expectations. Loosely hung lights or scattered strings will draw more negative attention to your display than no lights at all.  

- Inspect the installation from all angles to be aware of the image you are sending out to the marketplace. Using higher quality lights and meticulous attention to installation detail will result in a much more impressive display than a poor quality lights installed haphazardly.

Reaping what you sow  
While we must acknowledge many of winter's limitations on marketing of commercial landscaping, we do not need to concede entirely. Early preparation in the way of evaluating, creating and implementing results in an aesthetically pleasing, horticulturally sound and visually striking winter landscape.  

The results of such a program will more than justify the effort you will expend:  
- the good will generated by your efforts on your client's behalf;  
- the consistent off-season contact you have with your client while your competitors have no means to do so;  
- the extra income that keeps employees busy and productive;  
- the overall benefits to our industry by offering problem-solving, proactive services.  

In today's competitive marketplace, astute property owners and managers are continually searching for that added advantage separating their property from their neighbor's. A progressive landscape contractor will consistently be in demand by introducing clients to new concepts and practices that will keep their and your investments working all year round.

Kevin T. Block is the vice president, Sales & Marketing for Church Landscape Company, Inc., a LandCare USA Company

Snow removal services are the most common of operations used to offset winter expenses and supplement customer contact. Have your program and your equipment up to speed.

Student Career Days to build the best staff

The ALCA Student Career Days event, coming up March 18-21, 1999, at the University of Kentucky’s Lexington Center in Lexington, KY, is the landscape contracting industry’s best source of talented, qualified employees, as well as an unequaled opportunity for companies to demonstrate their value as a place to work and their commitment to the future of the industry. Competing students represent leading educational programs in interior/exterior and horticulture/landscape contracting programs at colleges and universities across the country.

There are several ways for landscape contractors to participate in Student Career Days: serve as event judges, interview and recruit students and/or sponsor events.

This is the largest gathering of potential landscape employees entering the job market. Companies seeking interns and new employees may interview the industry’s best and brightest students on the spot during Student Career Days, at the Career Fair element of the event. Companies may see potential future employees at work, as students from all across the country participate in 25 landscape-related competitive events, led by sponsoring landscape contractors and directly related to the needs of the Green Industry.

Sponsoring an event gives landscape contracting companies visibility among potential employees and participating educational institutions. Companies may sponsor events such as personnel management, sales, exterior/interior design, irrigation trouble-shooting, wood construction, truck and trailer operations and more. As a bonus, sponsorship includes one complimentary registration fee. ALCA will list sponsors in the on-site program and in various national and local publications, and sponsors may display information about their companies and products during the event. Judges assess student performance during the event.

Companies also may participate as observers. Observers get to see students in action and network with them on a casual level. Fees include receptions, lunch on Saturday and the Saturday dinner and social event.

For registration information, contact ALCA by phone at 800-395-2522 or 703-736-9666; fax, 703-736-9668; or e-mail: meetings@alca.org.

NAA schedules National Day of Service

On Saturday, October 17, almost 500 arborists from throughout the US will be providing tree care at Arlington National Cemetery as part of National Arborist Association’s “National Day of Service.” This event will also mark the five-year anniversary of NAA’s last National Day of Service.

Twenty-five work zones have been identified as requiring tree care, including areas near the Women in Military Service Memorial, the grave of President John F. Kennedy and the Tomb of the Unknown Soldier.

Arborists will be climbing trees ranging in height from 20 feet to over 80 feet, providing fertilization, cabling and pruning and other preservation and maintenance work. Says Paul Wolfe, NAA President, “The dollar value of the work is estimated to be approximately $400,000.”

Arlington National Cemetery and its 14,000 trees will benefit from this event both from the work, giving longer life and beauty to the trees, and by giving tribute to the over 230,000 people who are buried in Arlington’s 612 acres.

The event is free of charge and open to the public.

Dolibois installed as 1998-1999 ASAE Chairman

Robert J. Dolibois, CAE, executive vice president of the American Nursery and Landscape Association (ANLA), Washington, DC, was installed August 18 as Chairman of the Board of Directors of the American Society of Association Executives (ASAE) during its annual meeting. He is the 79th individual to hold the top elected leadership post for ASAE, the world’s leading professional organization for people who manage trade associations, individual membership societies and voluntary nonprofit groups.

As ASAE’s chief elected officer, Dolibois will direct a 34-member board that develops overall policy for the 24,000-member organization.

Southeastern Flower Show seeks landscape entries

The Southeastern Flower Show, with its 1999 theme “Salute to the Century—a Farewell with Flowers,” is accepting entries from both amateur and professional gardeners and landscapers. The show is set for Feb. 17-21 in Atlanta.

The juried show features six competitive divisions, plus a Junior Division for youths 18 years and under. Entry forms, along with an exhibitor’s guide and jr. exhibitor’s guide with rules and regulations are available by calling the show office at (404) 888-5638.

Organizers expect about 50,000 visitors to the four-and-one-half acre gardening exhibition and 35 professionally landscaped gardens.

New formulation ProStar 70WP

AgrEvo has developed a new formulation of ProStar 70WP which contains 40 percent more active ingredient than the original 50WP formulation. The higher concentration of active ingredient means less product is required for the same control as well as smaller-sized packaging. With 38 percent less carrier and more wetting agents and dispersants, which enhance fungicide distribution, ProStar 70WP is easier to mix and handle.

For more information contact AgrEvo at (610) 584-1139 or Circle No. 269

Weather-matic breaks new ground

The Weather-matic SL Controller is designed to provide complete water management control for commercial and institutional properties. The SL Controller operates as an independent field controller or as a link through a PC, utilizing user-friendly Wetware for Windows software, and offers 12- to 42-station models.

Additional features include: selectable four-program master control or independent station programming; four start times per program; selectable stacking or concurrent operation for each program; pump start or master valve assignable by station; daily 'no water' window; self diagnostics; real time clock to keep date and time during power loss and separate transformers for valve output and controller operation.

For more information contact Weather-matic call 888/4THE-PRO, or www.weathermatic.com, or Circle No. 271

Hand-held tool measures water flow

The Universal from Micro Weir, Portland, OR, is the first and only hand tool that determines water use before and after installation of plumbing products. At nine inches high, the universal has both 3 to 22 liters-per-minute and 0.35 to 6 gallons-per-minute easy-to-read scales.

Manufactured of clear polycarbonate, the Universal has no mechanical or moving parts to break down, requires no calibration and is light and easily handled.

Each serial-numbered Universal is guaranteed accurate to ±5 percent and has been used by a wide variety of companies and government departments requiring water flow information. For more information contact Lee Johnson at Micro Weir Co., at 503/827-8501, fax 503/827-8505, email: ljmweir@hotmail.com, or Circle No. 272
Get the balance right

When it comes to resharpening rotary blades, balance is very important. An unbalanced rotary blade sets up an unsafe vibration, increases operator fatigue and places excessive loading on mower components. The new Rota Rite 1000 sharpener from Bernhard and Co. is a unique, high speed, semi-automatic rotary blade grinder that takes the guesswork out of blade sharpening.

The blade is mounted onto a sliding carriage which is moved smoothly to produce accurate grinding, producing a sharp and correctly balanced blade every time. The unit is totally enclosed in a cabinet with an built-in vacuum. For more information contact Bernhard and Co., at 800/510-9632, www.bernhard.co.uk, or Circle No. 273

Colored topping for those dull surfaces

Micro-Top by Bomanite is a cost-effective, colored topping system that can be applied to existing walkways, driveways, entries, patios, pool decks and interior flooring. Unlimited color and design options can be installed, without prior abrasive blasting, in new or existing sites, utilizing a troweled-on topping that bonds to virtually any horizontal or vertical substrate, including concrete, wood, metal, plastic or asphalt. The micro-thin application presents a savings in comparison to high dosage cement coloring and makes graphic designs less time consuming. For more information contact Bomanite Corporation at 209/673-2411, fax 209/673-8246, email: bomanite@bomanite.com, www.bomanite.com, or Circle No. 275

BioSafe broad spectrum algicide/fungicide

ZeroTol from BioSafe Systems is a recently EPA-registered chemical for the broad-spectrum treatment and control of algae, fungi and bacteria on ornamentals and turf. The product uses an oxidation reaction to quickly and effectively kill algae, fungi and bacteria on contact, including spores.

With a zero hour REI, ZeroTol does not use or produce toxic residues and is labeled for use in commercial greenhouses, garden centers, landscapes, nurseries, interiorscapes and turf. ZeroTol can be applied to plant material as a pre-plant dip, soil drench or foliar spray, including turf applications. The product is labeled for algae, Anthracnose, black spot, Botrytis, brown patch, copper spot, dollar spot, downy mildew, fairy ring, Fusarium blight, leaf spot, pink snow mold, Pseudomonas, Pythium, Phytophthora, powdery mildew, Rhizoctonia, rust, scab, summer patch, scum, stripe smut, slime molds, Thielaviopsis, wilt and blights and their spores.

For more information contact BioSafe Systems, 80 Commerce St., Glastonbury, CT 06033, at 888/273-3088, fax 860/657-3388, email: biosafe@snet.net, www.biosafesystems.com, or Circle No. 275

We Specialize in Remote Controls

If you are wasting time at the controller or running back and forth to the field you need remote control. We specialize in universal remote controls for all 24VAC solenoid valve irrigation systems. The TRC Commander and Sidekick FM are affordable, easy to operate and backed by a 3 year warranty. In addition, we specialize in a line of receiver cards that extend our remote control to the valve capacity of specific clocks. Receiver cards are available with no hardwiring involved for the Rain Bird ESP MC, Irritrol Dial and MC series and Superior Controllers. Make your job easier - get remote.

Lawn Institute merges with Turf Resource Center

With the merger of the Lawn Institute into the Turf Resource Center (TRC) of Turfgrass Producers International (TPI), consumer education is slated to expand. The resources, materials and other assets of the Lawn Institute will be transferred to the TRC's on-going public relations and education program.

"Since we suspended operations a year ago," said Lawn Institute President Scott Patterson, "we have explored a number of ways we could continue the consumer education efforts of the Institute, without the day-to-day management and operational requirements."

David Doguet, TPI's immediate past president and a driving force behind creation of the TRC, said, "Five years ago, when TPI started to consider a public education program, we recognized that some would think we were only concerned with promoting turf grass sod. However, our intention and results prove that we really want to promote the environmental benefits of turfgrass, regardless of how it is established. Integrating the Lawn Institute's reputation, materials and funds with the TRC will allow this program to do even more, and more effectively."

Turn Merchants Inc. celebrates first 15 years

Over 300 customers, golf course superintendents, and distributors from across the United States helped Turf Merchants Inc. celebrate its 15th anniversary on June 19 at Willamette Valley Vineyards. There were also guests from China, Japan, and New Zealand. Dignitaries at the Customer Appreciation Dinner included State Senator Mae Yin and State Representative Carolyn Oakley. Dr. Joe Vargas, a turf specialist from Michigan State University was guest speaker. Steve Tubbs, president and owner of TMI, gave highlights of the company's growth from a small seed wholesaler to the largest independently owned Oregon seed company in 1998 with sales of over $40 million when combined with its two affiliates in Missouri and Texas.

Commercial mowers sold well in '98

Sales of commercial rotary mowers—both riding and intermediate-size walk behinds—were hot in 1998. The market for rotary riders should stay robust through 1999. The Outdoor Power Equipment Institute, Inc., Alexandria, VA, recently reported that rotary riders had "a substantial increase" of 10.8 percent, pushing shipments to 61,891 units for the model year running from September through August. The number of intermediate walkers rose by 9.7 percent to 52,985 units, rebounding from a disappointing 1997 when sales dropped by 10 percent.

The OPEI projected a strong market for commercial riders again in 1999, a 6.6 percent rise over 1998, or about 61,891 units. Sales of intermediate-size walk mowers shouldn't be as robust with a gain of 1.3 percent estimated.
