Savvy Landscape Managers and Designers who think green are sure to make Origin: Oregon Tall Fescue part of the art.

Enviromentially friendly, deep-rooted, drought, wear and shade tolerant tall fescue has long been a favorite of those who specify and manage turfgrass. Newer varieties have improved disease and insect tolerance, darker green color and finer leaves than before.

So, think green and make Oregon grown tall fescue part of your art... today!

Always specify Origin: Oregon tall fescue seed for consistent quality produced by professional growers in the Grass Seed Capital of the World.

Oregon Tall Fescue Commission

NOTHING SELLS MORE HUSTLERS THAN A HUSTLER.

But don’t believe an advertisement. Go ride any of our competitors’ mowers and then visit your local Hustler dealer for a demonstration. We trust your judgement.

Be sure and ask your dealer about special offers, and low financing available right now!
Until it's proven, all the claims mean nothing.

The same goes for lawn care products. You need solutions that are proven to work. Products that have been researched and tested to stand up to even your toughest weed, insect and disease problems. Others can claim it. Dow AgroSciences can prove it. Our comprehensive portfolio includes the leading solutions you know and trust, like Dimension®, Gallery® and Snapshot® specialty herbicides, as well as MACH 2® specialty insecticide. And our Turf & Ornamental Specialists are a proven resource for the service and support you need. But don't just take our word for it, see the proof at www.DowProvesIt.com.

OUTSIDE THE LINES: Landscape Management — the leading information resource for large, successful lawn care, landscape maintenance, design/build and irrigation professionals — empowers Green Industry professionals to learn and grow from their peers and our exclusive business intelligence. Serving as the industry conscience, we not only report on but also help shape news, views, trends and solutions.
Support means helping you win on your terms.

Get $400 off a Z830A and 5.99% a month financing for 5 years.

In a business where time is money, we've figured out a way to help you make the most of yours: 5.99% financing for 60 months on our entire line of Z-Trak PRO Series zero-turn mowers. And with the Z830A, you'll get $400 off instantly. So see your John Deere dealer today. Because we're ready to give you support in the field—and on the bottom line.

5.99% Low-Rate Financing for up to 60 Months at Participating John Deere Dealers offer available February 3, 2009 through August 3, 2009. Excludes Z-Trak Estate and EZtrak Zero-Turn Mowers. Subject to approved credit on John Deere Credit Revolving Plan, a service of FPC Financial, f.s.b. For personal use only. No down payment required. Finance charge will accrue at 5.99% APR and is for qualified buyers. Monthly payment will be calculated based on 2.0% of the amount financed at 5.99% APR. Rates subject to change. See local dealer for current rates. A $1.00 per month minimum may be required. Upon default the interest rate may increase to 19.8% APR. Other special rates and terms may be available, including installment financing. Available at participating dealers in the United States. Prices and savings in U.S. dollars.

Does your insurance company think a “grub problem” means mystery meat Monday?

In a competitive business environment, you can’t afford an insurance company that doesn’t understand your business. Hortica has over 120 years experience in the horticultural industry. We provide specialized insurance solutions and loss control strategies that other companies don’t deliver.

To learn how Hortica can help protect your business visit www.hortica-insurance.com or call 800-851-7740.
Without healthy soils, we’re history

Only water approaches soil’s importance in sustaining life on our beautiful blue globe. As obvious as that might seem, seldom do we give soil the attention it warrants in light of its crucial role in our livelihoods — not to mention our existence.

Perhaps like you, I’ve unthinkingly looked at soil and dirt as being one and the same. There’s a vast and vital difference, of course.

Living soil — replete with minerals, organic matter, invertebrates, macro-flora and micro-flora — is the foundation we build upon to populate our urban environments with beautiful, life-enhancing green material. Healthy soil is a marvelously complex and synergistic mixture of living and non-living material that engenders plant health.

Dirt, which is often lifeless, cannot do this.

Do we focus too narrowly on treating the symptoms of plant woes, rather than determining and fixing the root cause, which is usually damaged or poor-quality soil? Perhaps. Sometimes, of course, we have no choice, inheriting pre-existing conditions in the form of lifeless dirt. Then we must choose between improving the soil’s capacity to sustain healthy plant life or launching a maintenance regimen that, in the long run, might turn out to be wasteful, expensive and potentially harmful to the environment. Economics and revenue considerations often loom large in determining which course is selected.

Why is soil top of mind for me now? An enlightening Earth Day presentation by Dr. Rattan Lal, a world-famous soil scientist, at the Wooster, OH, campus of The Ohio State University re-opened my eyes to its vital importance — not just to our industry, but to our future well-being and survival.

I hope that you find Lal’s 10 laws of soil, which he shared with an audience of several hundred Earth Day celebrants, as enlightening as I did:

> **Law #1:** The biophysical process of soil degradation is driven by economic, social and political forces.
> **Law #2:** When people are poverty-stricken, desperate and starving, they pass on their sufferings to the land.
> **Law #3:** It is not possible to take more out of a soil than what is put in it without degrading its quality.
> **Law #4:** Marginal soils cultivated with marginal inputs produce marginal yields and support marginal living.
> **Law #5:** Plants cannot differentiate among the nutrients supplied through inorganic fertilizers or organic amendments.
> **Law #6:** Mining carbon has the same effect on global warming, whether it is through mineralization of soil organic matter and extractive farming, burning fossil fuels or draining peat soils.
> **Law #7:** Even the elite varieties of plants cannot extract water and nutrients from any soil where they do not exist.
> **Law #8:** Soils are integral to any strategy of mitigating global warming and improving the environment.
> **Law #9:** Sustainable management of soils is the engine of economic development, political stability and transformation of rural communities in developing countries.
> **Law #10:** Sustainable management of soil implies the use of modern innovations built upon traditional knowledge. Those who refuse to use modern science to address urgent global issues must be prepared to endure more suffering.

If you would like to view Lal’s complete PowerPoint presentation, which he kindly shared with me, email me at rhall@questex.com.

You can’t put off getting in step with America’s growing environmental movement if you want to ensure your place in tomorrow’s Green Industry.

You might already have figured this out, but here’s the scoop: Most of your customers aren’t interested in green services, particularly if it means they will be writing bigger checks to you. The hype and posturing regarding sustainability, regardless of products or services, far exceed the public’s acceptance and adoption.

At least that’s the case right now.

“Very few people today are making buying decisions based on what is green,” says Dr. Honey Rand, APR, president and CEO of Environmental PR Group, Lutz, FL. Rand describes selling propositions based solely on environmental claims as “meaningless.”

“Green is the new branding. There is so much green now that (the term) has no meaning anymore,” she adds.
