SERIOUS WORK VEHICLES FOR SERIOUS WORK.

HARDEST WORKING. SMOOTHEST RIDING.® With On-Demand
True All-Wheel Drive, legendary smooth Independent Rear Suspension, high ground clearance, and monstrous towing capacity, Polaris® RANGERs outwork every other vehicle in their class. Because when you make your living as a landscaper, you need a vehicle that works as hard as you do.

SEE THE COMPLETE LINE OF HARDEST WORKING, SMOOTHEST RIDING WORK VEHICLES AT POLARIS.COM

Vehicles are shown with optional equipment. Warning: For your safety, avoid operating Polaris RANGERS on paved surfaces or public roads. Never carry passengers unless the vehicle has been designed by the manufacturer specifically for that purpose. Riding and alcohol/drugs don’t mix. All passengers must be at least 12 years old and tall enough to grasp handholds and place feet firmly on the floor. Drivers must be at least 16 years old with a valid driver’s license. Check your local laws before riding on trails. © 2011 Polaris Industries Inc.
It's been a rough season. In many parts of the country, spring began with a huge amount of wet weather. That was followed by a very hot, dry summer — ideal conditions for the weeds that lawn care companies battle to make a living. And it seems, in a down economy and a depressed Green Industry, lawn care is the one bit of sunshine peaking through the rainclouds.

Weather
An executive at a mower manufacturer company once commented he didn't care what condition the economy was in. As long as it was raining, the grass would grow and people always need their grass cut. Apparently the early wet weather, followed by high temps and a lack of rain, led to increased business for lawn care professionals as well.

"Crabgrass is becoming more and more of an issue because we’re having soil cracking," says Tom Knopsnyder, vice president of operations for southeastern PA's Green Lawn Fertilizing. "Because of that, crabgrass is becoming more and more of a problem along with nutsedge. Before you would never really notice it in the month of July. We've been spraying it pretty much since the fourth.”

To win bids, customers need to visualize your design ideas. With PRO Landscape, they can.

Whether you are designing new installations or renovation projects, PRO Landscape has all the tools necessary to quickly create visual designs that will impress customers. PRO Landscape also lets you create accurate CAD drawings, customer-friendly proposals, night and holiday lighting designs, and 3D renderings. No wonder PRO Landscape is the easiest-to-use and most complete landscape design software available.

Photo realistic imaging • Easy-to-use CAD • Night and holiday lighting
Complete customer proposals • True 3D photo and CAD renderings

60-Day Money-Back Guarantee

Discover why PRO Landscape is the most popular design software for landscape professionals.

And it's not just southeast Pennsylvania that’s having problems.

“It’s got hot in many parts of the country,” says Kyle Miller, senior technical specialist for BASF. “All of our sales reps are talking about how much weed control is being done now.”

Even companies that were able to put down treatments in the spring have had issues.

“Most of the herbicides that we traditionally used in landscapes are gone,” says Jason Fausey, field development manager, Valent Professional Products. “They broke down faster; they got moved through the soil profile and now we’re getting a lot of weeds.”

The early wet weather might have led to lush lawns, but that can only take a homeowner so far.

“Even though your lawn was thick this spring, which we all would equate with an ability to compete with weeds during the summer, you’ve got very little herbicide left,” Miller says. “It’s not able to compete with these weeds, now that the hot weather has hit. Those summer weeds are more competitive than the turf.”

Of course, weather isn’t the only factor. Products and practice play a role in weed

Lawn Dawg (No. 12) and Green Lawn Fertilizing (No. 16) are among the companies with the highest lawn care revenue in the Green Industry according to data provided for the LM150.

1 TruGreen Lawncare and LandCare $1,335,175,000
2 Scotts Lawn Service $261,000,000
3 Weed Man $105,000,000
4 Lawn Doctor $78,850,000
5 NaturaLawn of America $37,372,500
6 Spring-Green Lawn Care Corp. $29,767,050
7 USM $13,330,590
8 Naturescape $12,482,090
9 Ryan Lawn & Tree $10,417,200
10 SavATree $9,366,600
11 Senske Lawn & Tree Care $7,600,000
12 Lawn Dawg $6,822,841
13 ProGrass $6,500,000
14 U.S. Lawns $6,120,000
15 DLC Resources Inc. $5,500,273
16 Green Lawn Fertilizing Inc. $5,000,273
17 Underwood Bros Inc. dba AAA Landscape $4,500,000
18 Moyer Indoor/Outdoor $4,483,415
19 Christy Webber Landscapes $4,093,562
20 Swingle Lawn, Tree & Landscape Care $3,740,974
21 Mainscape $2,793,000
22 Clintar Landscape Management $2,310,000
23 Lipinski Outdoor Services $2,127,811
24 Acres Group $2,057,594
25 Moore Landscapes Inc. $2,000,000

Crabgrass is one of the tougher challenges this year (left). Overly edged curbs and sidewalks help weeds invade more easily.

**Challenges**

**Weather** is not the only concern for contractors.

“There are growing restrictions and regulations in different counties and states (primarily along the East Coast),” says Patrick Bell, product manager, US Turf and Ornamental with Dow AgroSciences. “Lawn care professionals are facing a lot more regulations.”

Increased regulation might be the natural order for politicians, but it creates huge problems for contractors when those laws are created with few facts.

“Very little of the legislation that is introduced is based on hard science at all,” says Jim Campanella, president of Lawn Dawg, Nashua, NH. “It’s emotion; it’s symbolism over substance. It’s an emotional subject for some people, but you can’t legislate on emotion.

Continued on page 18.
Take a more tactical approach to removing tough weeds.

Tenacity® herbicide can be your distinct advantage. It strategically identifies and selectively removes 46 broadleaf weeds and undesired grasses—leaving nowhere for bentgrass, nimblewill, or crabgrass to hide.
Never Stop to Sharpen Again

That’s very dangerous.”

Campanella, a former president of the Professional Landcare Network (PLANET) has spent a great deal of time at committee meetings and hearings, meeting with representatives and battling that very issue.

“What was frightening for me when I got up there and started dealing with this was that I was the only person from the lawn care industry,” he says. Many peers attended the committee hearings in January, but the real work, Campanella says, takes place in spring and summer when most of the owners are out working.

“We don’t have the ability to defend ourselves,” he says. “Fortunately I was in a position where I could, and did. RISE (Responsible Industry for a Sound Environment) was helpful as were some local pest control companies, and we were able to ward off that legislation.”

**Trends**

Weather, not in the seasonal sense, but from a climate change point of view, seems to be slowly influencing the industry as well.

Part of the challenge has been the change in weather during the past decade. Whether it’s global warming or simply a temporary anomaly is a topic others can debate.

Knopsnyder knows there’s been a change. For the past 10 years the temperature has reached the high 80s in April.

“It didn’t used to be like that,” Knopsnyder says. “Because of that we’ve had to change our process to make sure we’re putting down the right products along with seeding the lawns with the best heat stress (tolerant) turfgrass.”

Warm season grasses are more drought tolerant and require less water than cool season alternatives.

Even guys with direct access to lawn
care products can have problems.

Tom Hill, communications manager — Specialty Products for BASF, isn’t immune from the challenges of cool season turf in a market seemingly better suited for warm season grass.

“I went from fescue to zoysia in the last 12 months for that very reason,” Hill says. “Because it was so hot the fescue was burning up. No matter how much water I was able to put on — even though I had irrigation — I had spots that were burning up. I decided to save money and put in turf that was going to be easier to manage during these hot periods of time in the transition zone.”

The bright spot

So, what does this all mean for lawn care professionals? For one they’ve been busy this summer and many are cashing in.

“What I have seen is an increase in activity — sales activity,” Campanella says. “People are buying lawn care this year. I’m seeing that not only in my own organization, but among my peers I’m hearing the same thing. Everybody seems to be up a little bit after having some flat years.”

That’s a sentiment shared by many.

“Lawn care and landscape is what we consider the bright spot,” says Bryan Gooch, marketing manager for Agrium Advanced Technologies. “The golf economy is still (challenged). The horticulture, nurseries and greenhouses, they’re not where they should be because commercial and residential real estate development is not back where it needs to be.

“We feel like we’re growing in lawn care,” Gooch says. “It’s one area the company will continue to invest in, he says.

“If consumer spending is down, people aren’t traveling as much,” Gooch says. “There’s a belief that people...
While there are numerous reports of weed resistance cropping up in agriculture and some in the golf market, it looks like the turf and ornamental (T&O) segment is safe...for now.

“‘There shouldn’t be any glyphosate resistance to speak of in the T&O business,’” says Russ Mitchell, director of marketing and southern regional sales manager for Quali-Pro. “It’s not like ag. The problem with ag is everything is about the absolute cheapest everything. And they tend to use really low rates of glyphosate. They’re out there spraying at this glyphosate resistance stuff at a pint to a quart of glyphosate per acre.”

That doesn’t mean there’s not some concern. “We do have weed resistance, for sure, but it’s more with pre-emergence and post-emergence where people have used the same family of chemistry over and over and over,” Mitchell says. “Just like fungicides, if you don’t rotate, you’re guaranteed to have resistance.”

There are many products that are good at killing poa and rye grass out of bermuda, Mitchell says. “The problem is, if you use them enough years you get to all of a sudden you can’t kill the poa. You’ve got to rotate to other chemistries.”

“People need to look at herbicides like they do fungicides,” he continues. “They know they have to rotate classes and families of chemistry. People have not paid that much attention because it’s not that big a deal in herbicides.”

Bobby Walls, Manager of Product Development for Professional Solutions Group on the T&O side for FMC, doesn’t believe resistance is a concern either. “You hear people every now and then say, ‘I’ve used product X and I’m now not getting control of a certain weed.’”

Walls says. “I’m not sure they’re always resistant issues. There could be some other things there.”

But like Mitchell, Walls encourages lawn care professionals to rotate their products.

“They need to be aware of their use of herbicides,” he says. “Anytime we continually use one mode of action on the same weed, down the road potentially that’s how resistance can be developed. First we identify the weed properly so we know what we’re targeting to control. Then we use the proper herbicide that will control that weed and then we use it according to the label rate to make sure we get the control. We don’t under dose it; we don’t overdose it. That will help us avoid having problems in the future.”

You get what you pay for. And sometimes, you get more.

Buy three jugs of Talstar® Professional and the fourth is FREE!

Talstar® Professional gives you dependable, long-lasting residual control of over 75 of the toughest lawn and ornamental pests, including ants, chinch bugs, billbugs, fleas, ticks, mites and more. Plus, Talstar gives you the confidence that comes from using the industry’s most trusted brand. And now, FMC is giving you even more.

Simply purchase three (3) 1-gallon or 3/4-gallon jugs of Talstar Professional between February 1, 2011 and November 30, 2011 and get a 1-gallon or ¾-gallon jug of Talstar Professional — FREE! For more information or a list of participating FMC Distributors, please visit www.fmcprosolutions.com or contact your FMC Market Specialist.
