

## Acknowledgements

This bulletin was developed jointly by the Michigan Department of Natural Resources, the U.S. Department of Agriculture Soil Conservation Service, and the Michigan State University Cooperative Extension Service. Senior author John Schrouder was responsible for the parts dealing with fishery management: Chapters 5, 6, 7, 8, 9 and 12. Charles Smith wrote Chapters 3, 11 and 14. Patrick Rusz did masters degree research at Michigan State University, resulting in the key find-

ing that pond depth of 15 feet or more is needed for maintaining satisfactory fish populations, and he worked on a preliminary draft of the bulletin. Ray White wrote Chapters 1, 2, 4, 10 and 13 and coordinated editing of the bulletin throughout.

William McClay of Michigan DNR was particularly helpful in reviewing the manuscript and suggesting alterations, as were Ned E. Fogle and David P. Borgeson, also of that Department. Glenn R. Dud-

derar, Extension Wildlife Specialist in the MSU Department of Fisheries and Wildlife, aided in developing Chapter 11.

The Pennsylvania State University Cooperative Extension Service at University Park provided the drawings of aquatic plants by Rae Chambers for Chapter 10. The Wisconsin Department of Natural Resources supplied drawings of fishes for Chapter 5. Other illustrations were by Michael Smith and Ray White.
