## VOLUME II.

	PAGE		PAGE
CHAPTER XXII.		<b>Grinding Machine, for milling cutters.....</b>	32 to 37
<b>MILLING MACHINERY AND MILLING TOOLS.</b>		Fixture for grinding parallel cutters.....	32
<b>The Milling Machine ; Advantages possessed by.....</b>	1	Errors in grinding milling cutters.....	32
The hand milling machine.....	1	Grinding thin cutters.....	33
Power milling machine.....	2	Grinding taper cutters.....	33
Universal milling machines.....	2, 3	Fixture for grinding taper work.....	33
The Brown and Sharpe Universal Milling Machine, general		Fixture for taper cutters and for face cutters.....	34
view of.....	4	The position of the emery wheel and clearance on the cutter...	35
The construction of the bearings and of the head.....	5	Grinding the teeth of spiral cutters.....	36
Sectional view of head.....	6	Positions of emery wheels in cutter grinding as affecting the	
The dividing mechanism.....	6	strength of the cutting edges.....	36, 37
The index plate.....	7		
Table of index holes for gear cutting.....	7	CHAPTER XXIII.	
The automatic feed motion.....	8, 9	<b>EMERY WHEELS AND GRINDING MACHINERY.</b>	
Special index plate for gear cutting.....	9	<b>Grinding Operations ; Classification of.....</b>	38
<b>The Brainard Milling Machine.....</b>	9	The qualifications of emery wheels.....	38
The various attachments of.....	10	Cements used in the manufacture of emery wheels.....	38
The rotary vise.....	10	Grades of coarseness and fineness of emery wheels.....	38
Universal head and back centre.....	10	Grades of wheels and the work they are suitable for.....	39
Universal head for gear cutting.....	11	Speeds of emery wheels.....	39
The head for cutting spirals.....	12	Balancing emery wheels.....	39
The cam cutting attachment.....	12	<b>Emery Grinding Machines.....</b>	40
<b>The Lipe Universal Milling Machine.....</b>	12	The Sellers drill grinding machine.....	41
Sectional view of the Lipe machine.....	13	The construction of the drill holding chuck.....	41
The feed motions of the Lipe machine.....	13	Varying the drill position to suit the diameter of the drill,	
The index head of the Lipe machine.....	14	and thus maintain equal conditions for all diameters of	
The adjustable centre rest.....	14	drills.....	41
<b>The Universal Milling Machine for heavy work.....</b>	15	Errors of construction in ordinary drill grinding machines.....	41
Construction of the driving gear and feed motion.....	15	The construction whereby the Sellers machine maintains an	
<b>Pratt and Whitney's double spindle milling machine.....</b>	16	equal degree of clearance from end to end of the cutting	
<b>Milling Cutters or Mills.....</b>	16 to 24	edge upon all sizes of drills.....	41, 42, 43, 44
Cutters with spiral teeth.....	17	The Sellers attachment for thinning the points of large twist	
Table of sizes of Brown and Sharpe standard cutters.....	17	drills.....	44
Table of standard sizes of Brainard cutters.....	17	The front rake of twist drills.....	44
Face cutters.....	17	Emery grinder for true surfaces.....	45
Twin cutters and right and left hand cutters.....	18	For engine guide bars.....	45
Advantages and disadvantages of face cutters.....	18	For car axle boxes.....	45
Angular cutters.....	19	Emery grinder with traversing emery wheel.....	46
Right and left angular cutters.....	19	For rough work.....	46
The Brown and Sharpe patent cutters.....	19	For planing machine knives or cutters.....	46
Shank cutters.....	19	Emery wheel swing frame for dressing large castings, &c..	46
The direction of the feed for shank cutters.....	20	Emery belt grinding machine.....	47
Applications of shank cutters.....	21	Presenting emery wheels to the work, or the work to the wheels.	47
Sizes of shank cutters.....	21	Annular emery wheels.....	48
Fly cutters.....	21	Recessed emery wheel.....	48
Different methods of making fly cutters, and the advantages		The wear of emery wheels.....	48
and defects of each method.....	21	<b>Polishing Wheels.....</b>	49 to 51
Circular cutters, and holders for fly cutters.....	22	The construction of.....	49
Matched cutters ; methods of matching cutters.....	23	Lapping the leather on.....	49
Gang or composite cutters ; cutters with inserted teeth.....	24	Method of keeping them true.....	50
<b>Cutter Arbors.....</b>	25	Charging with emery.....	50
<b>Milling.....</b>	25 to 30	The speed of.....	50
Comparison of the advantages of end milling, face milling, and		Polishing materials for.....	50
twin milling.....	25	Brush wheels for polishing.....	50
The length of feed in face milling.....	26	Speed of brush wheels.....	50
Cutting grooves in cylindrical work.....	27	Polishing materials for brush wheels for brass work.....	50
Angular cutters for groove cutting.....	27	Solid leather wheels.....	51
The crowding of grooving cutters and how to avoid it.....	27	Rag polishing wheels.....	51
The direction of the feed in cutting spiral grooves.....	27	Polishing materials for rag wheels.....	51
Setting angular grooving cutters.....	28	Polishing device for engravers' steel plates.....	51
Cutting right and left hand grooves and determining the direc-		<b>Grindstones and Tool Grinding.....</b>	51
tion of the feed for the same.....	29	The various kinds of.....	51
Fluting twist drills.....	29	Suitable for wood working tools.....	52
Finding the angle of the cutter in cutting spiral grooves.....	29	Suitable for saws or iron plates.....	52
Producing different shaped grooves with the same cutter... 29, 30		The speeds of.....	52
Holding work on the milling machine ; milling taper work... 30		The changes of pulley diameter necessary as the diameter of	
<b>Chucks for Milling Machines.....</b>	31	the stone decreases in order to maintain a nearly uni-	
<b>Vertical Milling Machine.....</b>	31	form circumferential speed of grindstone.....	52
<b>Profiling Machine.....</b>	31, 32	Arrangement of, for saw plates.....	52
		Hacking.....	53

	PAGE
Bedding brasses .....	132
The proper shape for the patterns of brasses.....	132
<b>Originating a True Plane.</b> .....	133
Finding which of three surfaces is the nearest to a true plane.....	133
Methods of testing the surfaces.....	134
A new process of originating surface plates.....	134
The deflection of surface plates.....	134
<b>The Friction of Plane Surfaces.</b> .....	135
<b>Oiling True Surfaces</b> .....	135

CHAPTER XXVIII.

ERECTING.

<b>Spirit-level.</b> .....	136
<b>Plumb-level</b> .....	136
<b>Joints</b> .....	136 to 141
Filing or making joints.....	137
Ground joints.....	137
Scraped joints.....	137
Cylinder covered joints.....	137
Making a scraped joint with the studs in their places.....	138
Joints for rough surfaces.....	138
Gauze wire joints.....	138
Water joints.....	138
Joints to withstand great heat.....	138
Rubber joints.....	139
Boiler fitting joints.....	139
Easily removable joints.....	140
Rust or caulked joints; caulking tools.....	141
Thimble joints.....	141
Expansion joint.....	141
<b>Pipes, Cocks and Plugs.</b> .....	141 to 145
Pipe cutters.....	141
Pipe vises.....	141
Pipe tongs.....	143
Erecting pipe work.....	144
Refitting leaky cocks and plugs.....	144
Grinding cocks and plugs.....	145
<b>Boxes and Brasses.</b> .....	145 to 149
Fitting brasses to their journals.....	145
Various forms of bearings and brasses or boxes.....	147
Locomotive axle boxes.....	148
Lead lined brasses.....	148
Open brasses.....	149
<b>Lubrication</b> .....	149 to 154
Examples of oil cavities and oil grooves for brasses.....	150
Qualities of lubricants.....	151
Testing lubricants.....	151
Best method of using thin oils.....	152
The influence of the atmosphere on oils.....	153
Longevity of lubricants.....	153
Testing oils for salts and acids.....	153
Swiss watchmakers' oil tests.....	153
The blotting paper oil test.....	154
<b>Friction and Wear.</b> .....	154
Morin's experiments on.....	154
Order of the value of metals to resist wear.....	154
White metal or babbitt metal lined boxes.....	155
Methods of babbitting boxes.....	156
The pressure on journals.....	156
<b>Cranks.</b> .....	156
Placing at right angles.....	156, 157
<b>Engine Cylinders</b> .....	158 to 161
Fitting.....	158
Setting.....	159
Reboring cylinders in their places.....	160
Scraping out cylinder ends.....	161

CHAPTER XXIX.

ERECTING ENGINES AND MACHINERY.

<b>Engine Guide Bars.</b> .....	162
Setting.....	162
The spring of.....	162
Testing.....	163
Setting by stretched lines.....	163
<b>Heating and Knocking of Engines</b> .....	164
The ordinary causes of.....	164, 166
<b>Aligning New Engines</b> .....	166 to 171
Classification of the errors in engine alignment.....	166
Testing the alignment of the crank.....	167
Showing separately the causes of beating and pounding.....	168
Methods of discovery and determining the errors of alignment.....	169
Errors of alignment in crank pins.....	170
Methods of discovering errors of crank pin alignment.....	170
Remedying errors of crank pin alignment.....	171, 172
<b>Slide Valves.</b> .....	173 to 175
Finding the dead centre of the crank.....	173

	PAGE
Taking up the lost motion when setting the valve.....	174
Measuring the valve lead.....	174
Finding the dead centre with a spirit level.....	174
<b>Setting Eccentrics on crank shafts.</b> .....	175
Setting double eccentrics by lines.....	175
<b>Erecting the Framework of machinery.</b> .....	176, 177
<b>Repairing and Patching broken frames</b> .....	178
<b>Erecting an Iron Planer</b> .....	179
Foundations for an iron planer.....	180
Fitting up and erecting a lathe.....	181
<b>Testing Lathes.</b> .....	181
Instruments for testing lathes.....	182
Testing lathe carriages.....	183
<b>Erecting Line Shafting.</b> .....	184 to 186

CHAPTER XXX.

LINE SHAFTING.

<b>Line Shafting.</b> .....	187 to 190
Sizes of.....	187
Cold rolled shafting.....	187
Distance between bearings of line shafting.....	187
Tests of hot rolled and cold rolled shafting.....	188
Collars for shafting.....	189
Diameters of line shafting.....	189
The strength of line shafting.....	190
Speeds for shafting.....	190
<b>Counter Shafts.</b> .....	191
<b>Friction Clutches.</b> .....	192
<b>Shafting Hangers</b> .....	193
Various forms of.....	193
Open-sided.....	193
Wall hangers.....	194
<b>Pillow Blocks for shafting.</b> .....	194
<b>Couplings.</b> .....	194 to 199
For line shafts.....	194
With split sleeves.....	195
Errors in.....	196
Self-adjusting.....	196
Plate.....	196
Clamp.....	197, 198
For light shafting.....	199
Universal.....	199

CHAPTER XXXI.

PULLEYS.

<b>Classification</b> .....	200, 201
Wood pulleys.....	200
Solid and split pulleys.....	200
Expansion pulleys.....	200
Self-oiling pulleys.....	200
Crowned pulleys.....	201
<b>Fastening pulleys to their shafts.</b> .....	201
<b>Balancing pulleys.</b> .....	202
<b>The Transmitting Power of pulleys</b> .....	204
Size of pulleys for countershafts.....	205
<b>Calculating the Speeds of pulleys.</b> .....	206

CHAPTER XXXII.

LEATHER BELTING.

<b>Hides</b> .....	207, 208
The parts of a hide used for belting.....	207
The thickness and stretch of the parts of a hide.....	207
Experiments on the strength of the parts of a hide.....	208
<b>Single and double belts.</b> .....	208
<b>Grain Side of Leather.</b> .....	208
Weakness of the.....	208
Why the grain side should go next to a pulley.....	208
<b>Belts.</b> .....	209 to 217
The length of.....	209
Belt clamp.....	210
The sag of belts.....	210
Belt connection at an angle.....	211
Guide pulleys for belts.....	211
The tension and creep of belts.....	212
Methods of joining the ends of belts.....	213
Forms of belt lacings.....	214
Covers for belt lacings.....	215
Lap joints for belts.....	215
Joining thin belts.....	215
Bevelled joints for belts.....	215
Pegged belts.....	215
Belt hooks and belt screws.....	216
Angular or V-belts.....	217
The line of motion of belts.....	217

	PAGE		PAGE
Changing or shipping belts.....	217	<b>Wood Joints.....</b>	274, 275
Automatic belt replacer.....	218	Mortise joint.....	274
Pull of a belt.....	218	Tenon joint.....	274
The Sellers experiments on transmission of power.....	218 to 225	Dovetail joint.....	275
Belt $5\frac{1}{2}$ " wide by $\frac{3}{32}$ " thick.....	219	Mitre joint.....	275
Belt $2\frac{1}{4}$ " wide by $\frac{9}{16}$ " thick.....	219	Half check joint.....	275
Rawhide belt 4" by $\frac{3}{32}$ ".....	220	<b>Examples of Pattern Making.....</b>	275 to 285
Double oak tanned belt 4" by $\frac{5}{16}$ ".....	220, 221	Patterns for piston gland.....	275
Oak tanned belt 2" by $\frac{3}{16}$ ".....	222	Construction of piston gland pattern.....	276, 277
Coefficient of friction and velocity of slip.....	222	Rapping small cast gears.....	277
Torsional moment.....	223	Casting pillow block.....	277
Increase of tensions.....	224	Pattern for pillow block.....	277
		Pulley pattern.....	278, 279
		Building up segments for patterns.....	278, 279
		Getting out arms for pulleys.....	280
		Making pipe patterns.....	280, 281
		Globe valve pattern.....	281, 282
		Angle valve pattern.....	283, 284
		Branch pipes.....	284 to 286
<b>CHAPTER XXXIII.</b>			
<b>FORGING.</b>			
<b>Testing Iron by bending it.....</b>	226		
Testing machines.....	227, 228		
<b>Tools for Blacksmiths.....</b>	228 to 232		
Forges.....	228, 229		
Chisels, &c.....	230		
Anvils.....	230		
Swages.....	230, 231		
Spring swages.....	231		
Swage blocks.....	232		
<b>Swaging.....</b>	232, 233		
<b>Examples in Welding.....</b>	233, 235		
Iron.....	233, 234		
Steel to iron.....	234		
Best method of.....	234, 237		
<b>Examples in Forging.....</b>	238 to 252		
Device for bolt forging.....	238		
Forging turn buckles.....	239		
Methods of bending iron.....	240		
Device for bending iron.....	240, 241		
Forging steel forks.....	241		
Forging under the hammer.....	242, 243		
Forging rope sockets.....	243, 244		
Forging wrought iron wheels for locomotives.....	244, 245		
Forging rudder frames.....	245, 246		
Welding scrap iron for large shafts.....	247		
Construction of furnace for heating scrap.....	247		
Forging crank shafts.....	248, 249		
Forging large crank shafts.....	249, 252		
Forging machines.....	252 to 263		
Foot-power hammer or Oliver.....	252, 253		
Standish's foot-power hammer.....	252, 253		
Power hammers and steam hammers.....	252, 253		
Bradley's cushioned hammer.....	252, 253		
Corr's power hammer.....	254, 255		
Kingsley's trip hammer.....	255		
The drop hammer.....	255, 256		
Steam hammers.....	257, 258		
Double frame steam hammer.....	258		
Double frame steam drop hammer.....	258		
Double frame steam drop hammer for locomotive and car axles and truck bars.....	259		
The Edgemore Iron Works' hydraulic forging press.....	260		
Dies for forging eye bars.....	260		
Nail forging machine.....	260		
Rolls for forming knife blades.....	261		
Machine for forging threads on rods.....	261, 262		
Finishing machine for horseshoes.....	262, 263		
Circular saw for cutting hot iron.....	263		
<b>CHAPTER XXXIV.</b>			
<b>WOOD WORKING.</b>			
<b>Pattern Making.....</b>	264, 267		
Choice and preservation of wood for.....	264		
<b>Bending Timber.....</b>	265, 266		
The bending block.....	265, 266		
Steaming wood for bending.....	266, 267		
<b>Wood Working Tools.....</b>	267 to 274		
Planes for pattern making.....	267		
Compass planes.....	268		
Stanley's iron frame block plane.....	269		
Stanley's bull-nose rabbit plane.....	269		
Bailey's patent adjustable planes.....	269		
The combination plane.....	269, 270		
The beading bit.....	270, 271		
Tool for cutting material into parallel slips.....	271		
The chisel and chisel handles.....	271		
Firmer and paring chisels and gouges.....	272		
Rip saws.....	272, 273		
Cross cut saw.....	273		
Common gauges for marking off work.....	274		
Mortise gauge.....	274		
Cutting gauge.....	274		
		<b>Classification.....</b>	287
		<b>Circular Saws.....</b>	287 to 305
		Gauges for circular saws.....	287
		Table of diameters.....	287
		Thickness.....	287
		Size of mandrel hole.....	287
		Shingle saw.....	287, 288
		Concave saw.....	287, 288
		Stretching of circular saws by heat.....	288
		The tension of circular saws.....	288
		Causes of alteration of tension and method of discovering the same.....	288
		Truth of circular saws.....	288
		Various effects of circular saws heating.....	288
		Truing circular saws.....	288
		Sharpening the teeth of circular saws.....	289, 290
		The gumming, gulleting or chamfering machine.....	290
		Inserted teeth of saws.....	290
		Chisel teeth saws.....	290, 291
		Inserting teeth in circular saws.....	290, 291
		Swing frame saws.....	290, 292
		Fence for swing frame saws.....	293
		Examples of work done on swing frame machine.....	293
		Swing machine with fixed table.....	294
		Double saw machine.....	294, 295
		Gauges for sawing machine.....	294
		Method of employing the mitre gauge.....	294
		Cropping and gauging gauge.....	296
		Bevel or mitre sawing machines.....	296, 298
		Roll feed circular saw machine.....	298, 300
		Segmental circular saws.....	300
		Fastening saw segments to their disks.....	301
		Gang edging machines.....	301
		Rack feed saw bench.....	301
		Construction of the feed motion.....	301 to 304
		Fibrous packing for circular saw.....	305
		<b>Tubular Saw Machine.....</b>	305
		<b>Cross Cutting or Gaining Machine.....</b>	305, 306
		<b>Scroll Sawing Machine.....</b>	306
		Construction of various scroll sawing machines.....	306, 307
		<b>Band Sawing Machine.....</b>	308 to 312
		Various kinds of teeth for band saws.....	308, 309
		Pitch of teeth for band saws.....	309
		The adjustment of the saws of band saw machines.....	309, 310
		Filing the teeth of band saw machines.....	309
		Re-sawing band saw machine.....	309, 310
		To regulate the tension of band saws.....	310, 311
		Construction of band saw guides.....	311
		Various band saw machines.....	311, 312
		<b>Reciprocating Cross Cutting Saw.....</b>	312
		Construction of.....	312
		<b>Horizontal Saw Frame Machine.....</b>	312 to 315
		Construction of the saw driving mechanism.....	314
		Construction of the feed motion.....	315
		Construction of the saw.....	315
		<b>Planing Machines.....</b>	315 to 341
		Buzz planer.....	315
		Construction of the work table.....	316
		Construction of the cutter head.....	316
		Skew knives.....	316
		Roll feed wood planing machine.....	317
		The construction of the feed rolls.....	317
		Adjustment of the feed rolls.....	317
		Construction of the pressure bars.....	317
		Adjustment of the roll pressure.....	318
		Adjustment of the work table.....	318

	PAGE
The roll driving mechanism.....	319
The cutter head .....	320
Three feed roll wood planing machine .....	322, 323
Pony planer.....	323
Construction of the feed mechanism.....	324
Balancing cutter heads and knives.....	324, 326
Farrar planing machine.....	326, 327
Planing and matching machine.....	328
Construction of the feed rolls.....	329
Construction of the upper cylinder.....	329
Construction of the lower cylinder.....	329
Construction of a matcher hanger.....	329
The timber planer.....	330, 331
Construction of parts of the timber planer.....	331
How the timber planer operates.....	331, 332
Panel planing and trying up machine.....	332, 334
Moulding machine.....	334
Double head panel raiser and double sticker.....	335, 336
Moulding cutters.....	336, 337
Cutter heads and circular cutters.....	337
The Shimer head.....	337
Head for producing match board grooves.....	337, 338
Jointing machine.....	338
Knives of jointing machine.....	338
Speed of cutter head or disc.....	338
Stroke jointers.....	338, 339
Machine for cutting mitre joints.....	339
Moulding or friezing machines.....	339
Important points of friezing machines.....	339
Construction of moulding and friezing machines.....	340, 341
Shape of cutters for moulding and friezing machine.....	341
Rotary cutters for all kinds of work, and for edge moulding and friezing machine.....	341 to 343
<b>Boring Machines</b> .....	342
Fences for.....	342
Augers or bits for.....	342
Boring machines for heavy work.....	343
<b>Mortising Machines</b> .....	344
Tools used in mortising machines.....	344
Motion of chisel bar and auger.....	344
Construction of bed.....	344
Adjustment of carriage.....	344
<b>Tenoning Machines</b> .....	344, 345
Construction of revolving heads.....	344, 345
Tenoning machine for heavy work.....	346
<b>Sand-papery Machines</b> .....	346, 349
Construction of sand-papery machines.....	347, 348
Movements of sand-papery machine.....	347
Cylinder sand-papery machines.....	348
Self-feeding sand-papery machine.....	348
Sizes of machines.....	348
Construction of feed rolls.....	348
Finishing and roughing cylinders.....	348
Brush attachment.....	348
Double wheel sanding machines.....	348, 349

CHAPTER XXXVI.

STEAM BOILERS.

<b>Strength of Boiler Shells</b> .....	350
<b>Strength of Boiler Plate</b> .....	351
Explanation of pressure in steam boilers.....	351
<b>Boiler Joints or Seams</b> .....	351 to 357
Forms of rivet joints.....	351
Single riveted lap joint.....	351
Double riveted lap joint.....	352
Single riveted butt joint with straps.....	352
Double riveted butt joint with straps zigzag riveted.....	352
Triple riveted lap joint zigzag riveted.....	352
Lap joint with covering plate.....	352
Double riveted lap joint chain riveted.....	353
Double riveted butt joints with double straps.....	353
Treble riveted butt joint with double straps.....	353, 354
Rules for spacing the rivets in boiler seams.....	353
Rule for finding diagonal pitch of riveted joints.....	353
High percentage joint.....	353
Rivets unevenly pitched.....	354
Rule for calculating the percentage strength of joint with unevenly pitched rivets.....	354
Strength of circumferential seams of stationary engine boilers.....	354, 355
Table of additions to be made to the factor of safety for various constructions of riveted joints.....	355
Table of diameter of rivets for single riveted lap joints.....	356
Rule for making rivet and plate area equal.....	356
Table of rivet diameter and pitch for single riveted lap joints.....	356
Rule for finding the pitch for double, diagonal riveted lap joints.....	356
Example in the use of rule for diagonal pitch of rivets.....	356
Rule for finding distance V where the diagonal pitch has been found.....	357
Comparing chain with zigzag riveted joints.....	357

	PAGE
<b>Interior of Boilers</b> .....	358 to 364
The internally fired flue boiler.....	358, 359
Boiler with Field tubes.....	359
Vertical water tube boiler.....	360
Construction of field tubes.....	360
Arrangement of field tubes.....	360
Vertical boilers with external uptakes.....	361
Horizontal return tubular boiler.....	361, 362
Construction of horizontal return tubular boiler.....	362, 363
Various arrangements of tubes in boilers.....	364
<b>Setting Boilers</b> .....	364, 366
Ground plan of brickwork.....	365
Setting full arch front boilers.....	365
Table of measurements for setting tubular stationary boilers with full arch front.....	366
Table of measurements for setting stationary boilers with half arch front.....	366
<b>The Evaporative Efficiencies of Boilers</b> .....	366 to 368
Table of the pressure, temperature and volume of steam.....	367
Calculating the evaporation of a boiler.....	368
<b>Care and Management of Boilers</b> .....	368 to 371
Examining safety valves.....	368
Water gauge glass.....	368
Gauge cocks.....	368
Lighting boiler fires.....	368
The thickness of the fire for boilers.....	368
Managing the fire.....	368
Shaking grate bars.....	369
The slice bar.....	369
The hoe.....	369
The poker.....	369
The clinker hook.....	369
The rake.....	369
The quantity of water in a boiler.....	369
Leaving the fire for the night.....	369
Leaving the safety valve for the night.....	369
Regulating the boiler feed.....	369
Dirty feed water.....	370
Defective feed pumps.....	370
Scale in boilers.....	370
Preventing the formation of scale.....	370
Feed water heaters.....	370
Low water in boilers.....	370
Priming or foaming.....	370
The known causes of priming.....	370
Wastefulness of priming.....	370
The detection of priming.....	370
To prevent or stop priming.....	370
Surface blow off cock or mechanical boiler cleaner.....	370
Blowing off a boiler.....	370
Blowing down a boiler.....	370
Washing out a boiler.....	371
Cleaning a boiler.....	371
Scaling a boiler.....	371
Examining a boiler.....	371

CHAPTER XXXVII.

STEAM ENGINES.

<b>Engine Cylinders</b> .....	372 to 374
The bores of.....	372
Sizes of.....	372
Wear of.....	372
Counterbore of.....	372
Clearance in.....	372
Lubrication of.....	373
The cocks of.....	373
Relief valves of.....	373
The steam ports of.....	373
Lagging.....	374
Jacketed cylinders.....	374
<b>Engine Pistons</b> .....	374
The speeds of.....	374
With releasing gears.....	374
With positive valve gears.....	374
The rings of.....	374
The follower.....	374
Testing the rings of.....	374
<b>Engine Piston Rods</b> .....	375
Methods of securing.....	375
Packing.....	375
Glands for.....	375
<b>Engine Cross Heads</b> .....	375
<b>Engine Guide Bars</b> .....	375
<b>Engine Connecting Rods</b> .....	375
Connecting rod keys.....	375
Angularity of.....	375
The lengths of.....	375
<b>Valves</b> .....	376 to 378

	PAGE
The D-valve.....	376
The point of cut off.....	376
Period of expansion of the steam.....	376
Point of release of the steam.....	376
Point of compression of the steam.....	376
Lead of.....	376
Point of admission of the steam.....	376
The lip.....	376
Exhaust lap.....	376
Steam lap.....	376
Tracing the action of.....	376
Double ported valves.....	377
The Allen valve.....	377
Webb's patent valve.....	377
Balanced valves.....	377
Circular valves.....	377
Piston valves.....	378
Separate cut off valves.....	378
Meyer's cut off valves.....	378
Gonzenback's cut off valve.....	378
<b>Eccentrics.....</b>	<b>378</b>
Shifting eccentrics.....	378
The action of.....	378
The angular advance of.....	378
<b>Designing Slide Valves.....</b>	<b>380</b>
<b>Valve Motions.....</b>	<b>381</b>
Diagram for designing.....	381
<b>Link Motion.....</b>	<b>383</b>
In full gear forward.....	383
In full gear backward.....	383
The action of.....	383
Setting the valves.....	383
<b>Governors.....</b>	<b>384</b>
Fly ball or throttling.....	384
Isochronal.....	384
Dancing.....	384
Speed of.....	384
Spring adjustment of.....	384
Sawyer's valve for.....	384
Speeder for.....	384
<b>Starting a Slide Valve Engine.....</b>	<b>384</b>
Crank position in.....	384
<b>Examination of an Engine.....</b>	<b>385</b>
Adjusting connecting rod brasses.....	385
Adjusting main bearing.....	386
Taking a lead.....	386
Squaring a valve.....	386
Heating, to avoid.....	386
Setting a valve.....	386
Leaky throttle valves.....	386
Freezing an engine, prevention of.....	386, 387
<b>Pumps.....</b>	<b>387, 388</b>
Lift and force.....	387
Plunger.....	387
Rotary.....	387
Single-acting.....	387
Double-acting.....	387
Displacement of.....	387
Principles of action of.....	387, 388
Speed of.....	388
Capacity of.....	388
Air chamber of.....	388
Belt.....	388

CHAPTER XXXVIII.  
THE LOCOMOTIVE.

<b>Modern Freight Locomotive.....</b>	<b>389, 390</b>
General construction.....	389
Course of steam from boiler to smoke stack.....	389
Boiler feed.....	389
Position of parts for starting.....	389
Steam supply to injectors.....	389
Oil supply to slide valve and cylinder.....	389
Control of safety valve.....	389
Pop valve.....	389
Automatic air brake.....	390
Draught of fire.....	390
Sand valves.....	390
<b>American Passenger Locomotive.....</b>	<b>390 to 393</b>
General construction.....	390
Steam reversing gear.....	390, 391
Link motion in full gear forward.....	391
In mid gear.....	392
In full gear backward.....	392
Reversing gear.....	392
Changing gear of link motion.....	393
Running forward.....	393
Running backward.....	393

<b>Special Operations.....</b>	<b>394</b>
Setting the slide valves.....	394
Getting the length of eccentric rods.....	394
Setting the lead.....	394
Backward eccentric.....	394
Marking sector notches.....	394
Setting Allen valves.....	395
<b>Special Parts.....</b>	<b>395 to 400</b>
The injector.....	395 to 397
Westinghouse automatic air brake.....	398 to 400
<b>Locomotive Running.....</b>	<b>400 to 404</b>
General discussion.....	400
Getting the engine ready.....	400
Laying the fire.....	400
Banking the fire.....	401
Starting up a banked fire.....	401
Examining the engine.....	401
Oiling the engine.....	401
Starting the engine.....	401
Saving fuel.....	402
Methods of firing.....	402
Examples of trips.....	402
<b>Accidents on the Road.....</b>	<b>402</b>
Knocking out cylinder heads.....	402
Heating of piston rods.....	403
Throwing off a wheel tire.....	403
Throwing off a driving wheel.....	403
Breaking a spring.....	403
Bursted tubes.....	403
Slipping eccentrics.....	403
Hot axle boxes.....	403
Breaking a lifting link.....	403
Breaking the saddle pin.....	403
Adjusting the wedges of the axle boxes.....	404

CHAPTER XXXIX.

THE MECHANICAL POWERS.

<b>Power.....</b>	<b>405</b>
<b>Lever.....</b>	<b>405</b>
The principles of.....	405
Wheels and pulleys considered as levers.....	405, 406
Power transmitted by gear wheels and pulleys combined.....	407
<b>Horse Power.....</b>	<b>407</b>
Calculating the horse power of an engine.....	407
Testing the horse power of an engine.....	408
<b>Safety Valve Calculations.....</b>	<b>409</b>
<b>Heat.....</b>	<b>410</b>
Latent heat.....	410
<b>Water.....</b>	<b>410</b>
<b>Steam.....</b>	<b>410</b>
Saturated.....	410
Superheated.....	410
Expansion of.....	411
Absolute pressure of.....	411
Weight of.....	411
Volume and pressure of.....	411
<b>Heat.....</b>	<b>411</b>
Conversion of heat into work.....	411
Joule's equivalent.....	411
Mechanical equivalent of heat.....	411
Mariotte's law.....	411
Radiation of heat.....	412
Conduction of heat.....	412
Convection of heat.....	412

CHAPTER XL.

THE INDICATOR.

<b>Computations from Indicator Diagrams.....</b>	<b>413</b>
<b>Indicators.....</b>	<b>413</b>
Description of.....	413
Thompson indicator.....	413
Tabor indicator.....	413
Diagrams.....	414
Admission of steam to indicator.....	414
Expansion line or curve.....	414
Exhaust line.....	414
Back pressure line.....	414
Atmospheric line.....	414
Theoretical diagram.....	414
Compression line or curve.....	415
Condensing engine diagram.....	415
Vacuum line of indicator diagram.....	415
(Barometer, construction of).....	415
(Barometer, graduation of).....	416
Indicator springs.....	416
Tables of springs for indicators.....	416

	PAGE
Attachment of indicators to an engine.....	416, 417
Pantagraph motions.....	417
Expansion curve, testing of.....	417, 418
Theoretical expansion curve.....	417, 418
Calculations from diagrams.....	418 to 421
Horse power.....	418, 419
Area.....	419
Rule for calculating horse power.....	419
Mean effective pressure.....	420
Steam used in engines.....	420
Water consumption.....	420, 421
Defective diagrams of engines.....	421
Excessive lead of engines.....	421
Theoretical compression curve of engines.....	422

CHAPTER XLI.

AUTOMATIC CUT-OFF ENGINES.

Definition.....	423
Corliss Automatic Cut-off Engine.....	423, 424
Valve gear of.....	424, 425
Governor of.....	425, 426
Admission of steam into.....	426
Lap of valve of.....	426, 427
High Speed Automatic Engines.....	427, 428
Speed of.....	427
Wheel governors for.....	427, 428
Straight Line Automatic Engine.....	428, 429
Important details of.....	429, 430
Steam Fire Engine.....	430, 431
Boilers of.....	430, 433
Pumps.....	431, 432
Heaters for.....	432, 433

CHAPTER XLII.

MARINE ENGINES.

Various Kinds of Marine Engines.....	434 to 451
High pressure engines.....	434
Compound condensing engines.....	434, 435
Triple expansion engines.....	436
Donkey engines.....	442
Trunk engines.....	446
Oscillating engines.....	446
Geared engine.....	446
Compound engine of the steamship <i>Poplar</i> .....	447, 450, 451
Arrangement of Marine Engine Pumps.....	436
Boilers of Marine Engines, Arrangement of.....	436, 437
Various Parts of Marine Engines, etc.....	438 to 449
Valve for intermediate cylinder of triple expansion engines.....	438
Link motions for triple expansion engines.....	438
Auxiliary or by-pass valve.....	438, 439
Oiling apparatus.....	439, 440
Surface condensers.....	440
Circulating pumps.....	440
The snifting valve.....	440
The blow-through valve.....	440
Air pumps.....	441
The air chamber.....	441
Feed escape or feed relief valve.....	441
Bilge injections for marine engines.....	441, 442
Surface condensing, advantages of.....	442
Valves of the surface condensing engine.....	442
Case hardening.....	442
Link motion for marine engines.....	443
The separate expansion valve.....	443
Friction of slide valves.....	443
Double beat valves.....	443
The siphon.....	443
Steam lubricators.....	444
Marine engine valves that are worked by hand.....	444
Vacuum gauge.....	444
Condenser, to find the total pressure in the.....	444
Paddle wheels.....	444, 445
Screw propeller.....	445
The thrust bearing.....	445
Marine engine, the principal parts of.....	445
Lagging marine engines.....	446
Propeller cylinders.....	446
Fuel required.....	446
Freezing of pipes.....	446
Failure of engine to start, causes of.....	446, 447
Defective vacuum, causes of.....	447
Heating, causes of.....	447
Construction of a triple expansion engine.....	447 to 449

CHAPTER XLIII.

MARINE BOILERS.

	PAGE
Plates for Marine Boilers.....	452
Iron.....	452
Steel.....	452
Strength of.....	452
Boiler Stays.....	452
Methods of securing.....	452
Boiler Tubes.....	452
Methods of securing.....	452
Causes of leaks.....	452
Repairing leaks.....	452
The Up-take.....	453
The Receiver.....	453
The Fittings and their Uses.....	453, 454
Valves.....	453, 454
Gauges.....	453, 454
Cocks.....	454
Important Features and Facts.....	454, 455
Boiler scale.....	454
The salinometer.....	454
Priming, the prevention of.....	454
Supplemental parts.....	454, 455
The superheater.....	454
The draught.....	455
Wasting of plates.....	455
Fuel, the quantity of.....	455
To Relieve the Boiler in Case of Accident.....	455
Steel Marine Boiler.....	456
The "Martin" Boiler.....	456
Testing and Examining Boilers.....	456 to 459
Hydraulic tests.....	456
Related to stays.....	456, 457
On new and old boilers.....	456, 457
Internal examinations.....	458
Preparation for.....	458
Safety valves.....	458
Bottom of the boiler.....	458
Bottom and sides of the furnace.....	458
Boxes and stays.....	458
Use of chipping hammer.....	458
Pit holes in the bottom of a furnace.....	458
Drilling through the plates.....	458
Flanges of furnaces.....	458
Deposits on the necks of stays.....	458
Man-hole door.....	458
Superheater.....	459
Proportions for grate surface.....	459
Outside examination.....	458
Cement beds for boilers.....	458
Proportions for circular tubular boilers.....	459

CHAPTER XLIV.

HARDENING AND TEMPERING.

Purposes.....	460
To resist wear.....	460
To increase elasticity.....	460
To provide a cutting edge.....	460
Manufacturer's Temper.....	460
Blacksmith's Temper.....	460
Color Tempering.....	460
Practical Processes.....	461 to 464
The muffle.....	461
Warping.....	461
Rapidity of reduction of temper.....	461
Brown and Sharpe's practice.....	461
Waltham Watch Co.'s practice.....	461
Pratt and Whitney Co.'s practice.....	461
Morse Twist Drill Co.'s practice.....	461
Outside hardening.....	462
Heating in fluxes.....	462
Monitor Sewing Machine Co.'s practice.....	462
Hardening saws.....	462
Drawing the temper.....	462
1. Lying in an open furnace.....	462
2. Stretched in a frame.....	462
3. Between dies.....	462
Stiffening saws.....	463
Tomlinson Carriage Spring Co.'s practice.....	463
Columbia Car Spring Co.'s practice.....	463
New Haven Clock Co.'s practice.....	464

APPENDIX.

Part I.—Test Questions for Engineers.....	467
Part II.—Dictionary of Workshop Terms.....	473

# FULL-PAGE PLATES.

## VOLUME II.

		<i>Facing</i>
<i>Frontispiece.</i>	COMPOUND MARINE ENGINE. . . . .	TITLE PAGE
